Broadcast Electronics Product Warranty (Two-Year Limited)

BE hereby warrants all new products manufactured by BE against any defects in material or workmanship at the time of delivery thereof, or that develop under normal use within a period of two (2) years from the date of shipment.

BE reserves the right to repair equipment under warranty with new or refurbished equipment or parts. BE's sole responsibility with respect to any equipment or parts not conforming to this warranty is to replace or repair such equipment upon the return thereof F.O.B. to BE's factory in Quincy, Illinois, U.S.A. In the event of replacement pursuant to the foregoing warranty, only the unexpired portion of the warranty from the time of the original purchase will remain in effect for any such replacement.

This warranty shall exclude the following products, component parts and/or assemblies:

- (a) Transmitter power output tubes shall only carry the original manufacturers' or suppliers' standard warranty in effect on their original shipment date.
- (b) All computers, computer peripherals, cables, hard disk drives, etc., shall only carry the manufacturers' or suppliers' standard warranty in effect on their original shipment date.
- (c) "Components", defined as separate and individual parts (e.g. transistors, integrated circuits, capacitors, resistors, inductors, fans, etc), resold by BE from another manufacturer or supplier, shall only carry a 90 day warranty, effective the date of shipment. Any such 'Components' being returned for warranty claim must be (1) returned in their original packaging and (2) must be in new, unused condition.
BE is unable to process or resolve component defects or performance concerns on components that have been soldered, installed, wired or in any way altered from new their new condition.
- (d) "Resale Equipment", defined as equipment purchased from another manufacturer or supplier, then resold by BE, shall only carry such manufacturer's or supplier's standard warranty in effect as of the original shipment date. All warranty claims against any and all 'resale equipment' sold by BE must be filed directly with the original equipment manufacturer. BE is unable to process or resolve equipment defects or performance concerns on products or services not manufactured by BE.

This warranty shall not extend to claims resulting from any acts of God, terrorism, war, defects or failures caused by Purchaser or user abuse or misuse, operator error, or unauthorized attempts to repair or alter the equipment in any way.

Under no circumstances shall BE be responsible for indirect, incidental or consequential damages, including, but not limited to transportation costs, non-authorized repair or service costs, downtime costs, costs for substituting equipment or loss of anticipated profits or revenue, incurred by Purchaser, whether based in contract, tort or for negligence or breach of statutory duty or otherwise.

The terms of the foregoing warranty shall be null and void if the equipment has been altered or repaired without specific written authorization from BE, or if not installed according to BE's instruction manuals, including, but not limited to, the absence of proper grounding, surge (TVSS) protection on the AC circuit panel or proper lightning protection/grounding on all output circuits, or if equipment is operated under environmental conditions or circumstances other than those specifically described in BE's product literature or instruction manual which accompany the equipment. **The warranty shall be voided if the product or subassembly is equipped with a tamper seal and that tamper seal is broken.** BE shall not be liable for any expense of any nature whatsoever incurred by the original user without prior written consent of BE. The warranty provided herein shall terminate at the end of the period set forth above. **This warranty extends only to the original Purchaser and is not transferable.** There are no third party beneficiaries of any of the provisions of this warranty. If the equipment is described as "used" equipment, it is sold as is and where is and no warranty applies unless authorized in writing.

EXCEPT AS SET FORTH HEREIN, AS TO TITLE AND AS SPECIFICALLY REQUIRED BY LAW, THERE ARE NO OTHER WARRANTIES, OR ANY AFFIRMATIONS OF FACT OR PROMISES BY BE, WITH REFERENCE TO THE EQUIPMENT, OR TO MERCHANTABILITY, FITNESS FOR A PARTICULAR APPLICATION, SIGNAL COVERAGE, INFRINGEMENT, OR OTHERWISE, WHICH EXTEND BEYOND THE DESCRIPTION OF THE EQUIPMENT ON THE FACE HEREOF.

IMPORTANT INFORMATION

EQUIPMENT LOST OR DAMAGED IN TRANSIT -

When delivering the equipment to you, the truck driver or carriers' agent will present a receipt for your signature. Do not sign it until you have:

1) Inspected the containers for visible signs of damage and 2) Counted the containers and compared with the amount shown on the shipping papers. If a shortage or evidence of damage is noted, insist that notation to that effect be made on the shipping papers before you sign them.

Further, after receiving the equipment, unpack it and inspect thoroughly for concealed damage. If concealed damage is discovered, immediately notify the carrier, confirming the notification in writing, and secure an inspection report. This item should be unpacked and inspected for damage WITHIN 15 DAYS after receipt. Claims for loss or damage will not be honored without proper notification of inspection by the carrier.

RF PRODUCT TECHNICAL ASSISTANCE, REPAIR SERVICE, PARTS -

Technical assistance is available from Broadcast Electronics by letter, prepaid telephone or E-mail. Equipment requiring repair or overhaul should be sent by common carrier, prepaid, insured, and well protected. If proper shipping materials are not available, contact the RF Technical Services Department for a shipping container. Do not mail the equipment. We can assume no liability for inbound damage, and necessary repairs become the obligation of the shipper. Prior arrangement is necessary. Contact the RF Technical Services Department for a Return Authorization.

Emergency and warranty replacement parts may be ordered from the following address. Be sure to include the equipment model number, serial number, part description, and part number. Non-emergency replacement parts may be ordered directly from the Broadcast Electronics stock room at the number shown below.

RF TECHNICAL SERVICES -

Telephone: +1 (217) 224-9617

E-Mail: rfservice@bdcast.com

Fax: +1 (217) 224-6258

FACILITY CONTACTS -

PARTS -

Telephone: +1 (217) 224-9617

E-Mail: parts@bdcast.com

RETURN, REPAIR, AND EXCHANGES -

Do not return any merchandise without our written approval and Return Authorization. We will provide special shipping instructions and a code number that will assure proper handling and prompt issuance of credit. Please furnish complete details as to circumstances and reasons when requesting return of merchandise. All returned merchandise must be sent freight prepaid and properly insured by the customer.

MODIFICATIONS -

Broadcast Electronics, reserves the right to modify the design and specifications of the equipment in this manual without notice. Any modifications shall not adversely affect performance of the equipment so modified.

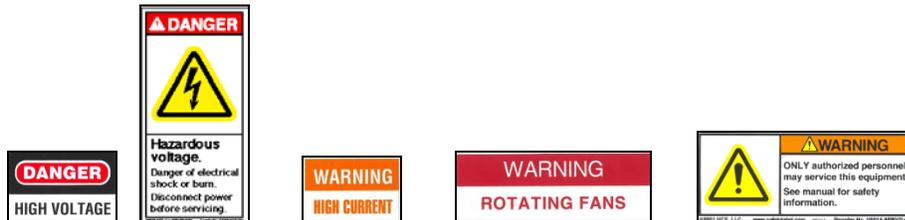

SAFETY PRECAUTIONS

PLEASE READ AND OBSERVE ALL SAFETY PRECAUTIONS//

ALL PERSONS WHO WORK WITH OR ARE EXPOSED TO POWER TUBES, POWER TRANSISTORS, OR EQUIPMENT WHICH UTILIZES SUCH DEVICES MUST TAKE PRECAUTIONS TO PROTECT THEMSELVES AGAINST POSSIBLE SERIOUS BODILY INJURY. EXERCISE EXTREME CARE AROUND SUCH PRODUCTS. UNINFORMED OR CARELESS OPERATION OF THESE DEVICES CAN RESULT IN POOR PERFORMANCE, DAMAGE TO THE DEVICE OR PROPERTY, SERIOUS BODILY INJURY, AND POSSIBLY DEATH.

DANGEROUS HAZARDS EXIST IN THE OPERATION OF POWER TUBES AND POWER TRANSISTORS -

The operation of power tubes and power transistors involves one or more of the following hazards, any one of which, in the absence of safe operating practices and precautions, could result in serious harm to personnel.

- A. HIGH VOLTAGE** - Normal operating voltages can be deadly. Additional information follows.
- B. RF RADIATION** - Exposure to RF radiation may cause serious bodily injury possibly resulting in Blindness or death. Cardiac pacemakers may be affected. Additional information follows.
- C. HOT SURFACES** Surfaces of air-cooled radiators and other parts of tubes can reach temperatures of several hundred degrees centigrade and cause serious burns if touched. Additional information follows.
- D. RF BURNS** Circuit boards with RF power transistors contain high RF potentials. Do not operate an RF power module with the cover removed.

HIGH VOLTAGE –

Many power circuits operate at voltages high enough to kill through electrocution. Personnel should always break the primary AC Power when accessing the inside of the transmitter.

RADIO FREQUENCY RADIATION

Exposure of personnel to RF radiation should be minimized, personnel should not be permitted in the vicinity of open energized RF generating circuits, or RF transmission systems (waveguides, cables, connectors, etc.), or energized antennas. It is generally accepted that exposure to “high levels” of radiation can result in severe bodily injury including blindness. Cardiac pacemakers may be affected.

The effect of prolonged exposure to “low level” RF radiation continues to be a subject of investigation and controversy. It is generally agreed that prolonged exposure of personnel to RF radiation should be limited to an absolute minimum. It is also generally agreed that exposure should be reduced in working areas where personnel heat load is above normal. A 10 mW/cm² per one tenth hour average level has been adopted by several U.S. Government agencies including the Occupational Safety and Health Administration (OSHA) as the standard protection guide for employee work environments. An even stricter standard is recommended by the American National Standards Institute which recommends a 1.0 mW/cm² per one tenth hour average level exposure between 30 Hz and 300 MHz as the standard employee protection guide (ANSI C95.1-1982).

RF energy must be contained properly by shielding and transmission lines. All input and output RF connections, such as cables, flanges and gaskets must be RF leak proof. Never operate a power tube without a properly matched RF energy absorbing load attached. Never look into or expose any part of the body to an antenna or open RF generating tube or circuit or RF transmission system while energized. Monitor the tube and RF system for RF radiation leakage at regular intervals and after servicing.

HOT SURFACES –

The power components in the transmitter are cooled by forced-air and natural convection. When handling any components of the transmitter after it has been in operation, caution must always be taken to ensure that the component is cool enough to handle without injury.

1 HD Radio™ FM Reference FSi 10

1.1 System Overview

Broadcast Electronics uses the IBOC (in-band-on-channel) digital broadcasting system from iBiquity Digital Corporation now known as HD Radio. The system is designed to permit a smooth evolution from current analog amplitude modulation (AM) and frequency modulation (FM) radio to a fully digital IBOC system. This system delivers digital audio and data services to mobile, portable, and fixed receivers from terrestrial transmitters in the existing medium frequency (MF) and very high frequency (VHF) radio bands. Broadcasters may continue to transmit analog AM and FM simultaneously with the new, higher-quality and more robust digital signals, allowing themselves and their listeners to convert from analog to digital radio while maintaining their current frequency allocations. The FSi 10 is Broadcast Electronics' HD Radio Generator, part of a system used in creating the HD signal to overlay onto the FM signal.

NOTE: An FSi 10 is always used with an FXi 60/250.

1.2 Document Overview

This document provides a description of controls and indicators, system interconnection, and operating procedures for the FSi 10 FM IBOC Digital Signal Generator.

2 Abbreviations and Conventions

2.1 Abbreviations and Acronyms

AES/EBU	Audio Engineers Society / European Broadcast Union
ALFN	Absolute L1 Frame Number
AM	Amplitude Modulation
BER	Bit Error Rate
CD	Compact Disk
CD-ROM	CD/Read Only Memory
DUN	Dial-Up Networking
FCC	Federal Communications Commission
FM	Frequency Modulation
GEL	Gateway to Exciter Link – Exciter = FS _i 10
GPS	Global Positioning System
GUI	Graphical User Interface
IBOC	In-band On-channel
L1	Layer 1
MF	Medium Frequency
MPA	Main Program Audio
MP1–MP7	Primary Service Modes 1 through 7
MS1–MS4	Secondary Service Modes 1 through 4
PAC	Perceptual Audio Coder
PAR	Peak-to-Average Ratio
RF	Radio Frequency
RLS	Radio Link Service
SIS	Station Identification Service
VHF	Very High Frequency

2.2 Presentation Conventions

- Unless otherwise noted, the following conventions apply to this document:
- Information enclosed in braces { } is either unavailable at the present time or subject to change.
- All vectors are indexed starting with 0.
- The element of a vector with the lowest index is considered to be first.
- In drawings and tables, the leftmost bit is considered to occur first.
- Bit 0 of a byte or word is considered the least significant bit.
- In representations of binary numbers, the least significant bit is on the right.
- When presenting the dimensions of a matrix, the number of rows is given first (e.g., an $n \times m$ matrix has n rows and m columns).
- In timing diagrams, earliest time is on the left.

3 Installation

Installation of the FSi 10 IBOC digital signal generator consists of: 1) installing the unit in a rack and 2) connecting the FSi 10 to the digital link, audio processing equipment, and the FXi digital FM/IBOC exciter. Refer to the following text to install the FSi 10 and configure the FM system for IBOC transmission.

3.1 FSi 10 Installation

The FSi 10 may be installed in any convenient location in a 19 inch (48.3 cm) rack within reach of the transmitter, STL link, and audio processing equipment. The unit requires 7 inches (17.78 cm) of rack space. Please see the Transmitter Manual for details on physical placement of the FSi 10 in a transmitter rack.

3.2 IBOC System Connections

The FSi 10 is part of an HD Radio broadcasting system. This system consists of several pieces of equipment; the FSi 10, FXi 60/250 and an FMi Transmitter. The information to connect the system is found in the FXi Digital FM/IBOC Exciter/Transmitter manual 597-0541.

3.3 FSi 10 Install Checklist

- Install FSi 10 in the transmitter.
 - Connect 1PPS Out on FSi 10 to 1PPS In on FSi 10
 - Connect GPS Data Out on FSi 10 to GPS Data In on FSi 10
 - A mouse and keyboard must be connected before boot-up to do any editing such as Ethernet IP Address setup, etc.
 - Connect FSi 10 LVDS IBOC Data to FXi 60/250 IBOC Data
 - Connect J3-4(+) and J3-25(-) on FXi 60/250 Exciter to Output 13 (+/-) on the FSi 10.
 - Connect 10MHz Out on FSi 10 to 10MHz Reference on FXi 60/250
 - Connect Main Audio Feed from studio into Studio AES In on FXi 60/250 (This must be AES/EBU format at 32, 44.1, 48, or 96kbps).
 - In a low-level combined system or when your existing FM transmitter can take AES input connect FM AES Out from FXi 60/250 to your FM Audio Processor AES Input. In a high-level combined or separate antenna installation where your existing transmitter requires a composite input, connect the FM AES Out from the FXi 60/250 directly to the AM/FM AES In on the FSi 10.
 - Connect IBOC AES Out from FXi 60/250 to your HD Radio Audio Processor AES Input.
- Note: When utilizing one processor for both FM and HD Radio you can use either the FM AES Out or IBOC AES Out from the FXi 60/250 to drive the AES input on your processor.
- In a low-level combined system or when your existing FM transmitter can take AES input connect the FM Audio Processor AES Out to the AM/FM AES input on FSi 10. In a high-level combined or separate antenna installation where your existing transmitter requires a composite input, connect the FM AES Out from the FXi 60/250 directly to the AM/FM AES In on the FSi 10.
 - Connect the HD Radio Audio Processor AES Out to the IBOC AES In on FSi 10.
 - In a low-level combined system connect the AM/FM AES Out to the AES/EBU input on the FXi 60. In a high-level combined or separate antenna system this output would go to your existing FM transmitter. If your existing FM transmitter requires a composite input, connect the AM/FM AES Out from the FSi 10 to the AES input on your FM Audio Processor and connect the composite output to your existing FM transmitter.
 - If your Studio to Transmitter Link (STL) can support 4kbps of data you can send song artist and title information over the link. Connect the data output from the STL to the IBOC data input on the FSi 10. The input data stream must use the SLIP protocol. This type of data can also be sent via Ethernet or Modem.

4 Front Panel Description

Front panel descriptions are divided into two categories: Display/Indicator Definitions and Control Buttons for the exciter and EASU.

In all windows the following general rules apply:

- Read-only fields have a light blue background
- Read/write fields have a blue-green background
- On data entry screens the Cancel button will not make any entered data permanent. Any screen with a Cancel button will also have an OK button that can be used to make data permanent.
- On data entry screens the Close button only closes the window. Any data that has been specified is already permanent because it was registered as entered.
- On Numeric keyboard screens the valid range of data will be displayed.
- Failures that need attention are displayed in RED.
- Warnings are displayed in Yellow.
- Normal status information is displayed in Green.

4.1 Graphical User Interface Display/Indicator Definitions

Figure 4-1 is the HD Radio™ FM Exciter graphical user interface (GUI) main menu, as configured upon startup. Descriptions of display/indicator fields accessible from this screen are provided in the following subparagraphs.

The first four lines depict the status of the four AES audio ports, Analog Input, Analog Output, Digital Input, and Monitor Output. These lights will blink from black to green as long as there is audio on each port. If silence is detected the light will remain black.

The Analog input and Digital input Fault lights should remain black during normal operation. If the AES stream at either port is not detected the light will turn Red indicating the Fault.

The Digital Up Converter activity monitor will blink from black to green as long as data is exchanged with the DUC. If no DUC data activity is detected this light will remain black.

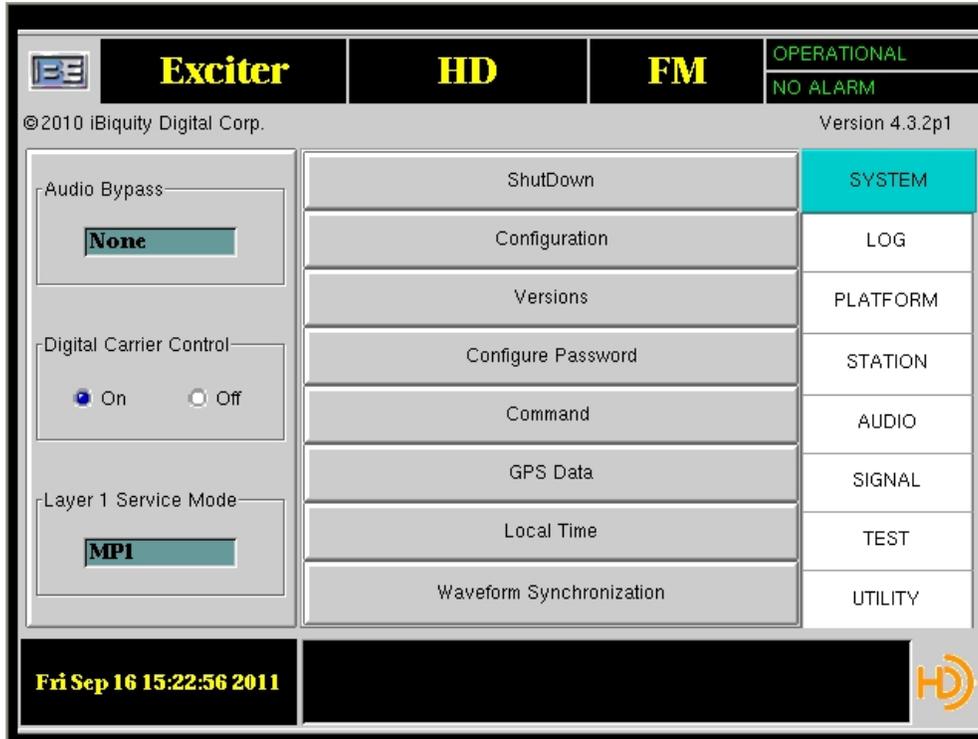

Figure 4-1 Reference Exciter GUI Interface System Tab

4.1.1 Platform Indicator

This identifies the present system platform. When selected a platform menu is displayed as shown in *Figure 4-2*.

To change the exciter platform select the desired setting and press Restart button. The system application will now be restarted as the new platform type. To exit the menu with no changes select Cancel to exit.

NOTE: *The platform selected must be compatible with the hardware in use or errors will occur.*

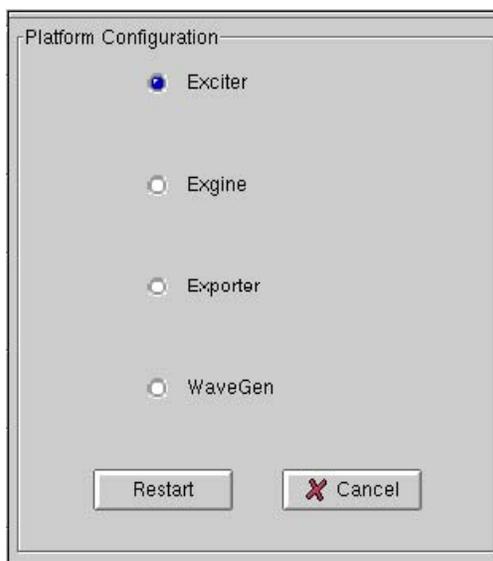

Figure 4-2 Version Properties Screen

4.1.2 Station Information

The Station Call Sign indicator displays the call sign being transmitted with the digital data. When selected, the Station Information screen (*Figure 4-3*) is displayed.

The Station Information screen is subdivided into 4 group boxes: Station Identification, Call Sign, Station Slogan, and Station Message.

The screenshot shows a software interface for station information. It is divided into four main sections:

- Station Identification:** Contains two tabs: "FCC ID" (selected) and "Country Code". Below the "FCC ID" tab is a text field containing "21".
- Call Sign:** Contains two tabs: "Standard" (selected) and "Universal". Below the "Standard" tab is a text field containing "HD" and a checked checkbox labeled "Append '-FM'".
- Station Slogan:** Contains two tabs: "Standard" (selected) and "Universal". Below the "Standard" tab is a text field containing "HD Radio...www.HD-Radio.com" and a checked checkbox labeled "Enable both standard and universal formats".
- Station Message:** Contains a text field with "HD Radio...www.HD-Radio.com" and a dropdown menu currently set to "ISO 8859-1". Below this is an unchecked checkbox labeled "High Priority".

At the bottom of the screen are two buttons: "OK" and "Cancel".

Figure 4-3 Station Information Screen

4.1.3 Station Identification

- **Country Code**

The Country Code tab, when selected, displays a Numeric Keyboard screen similar to *Figure 4-6*. To change the Country Code, enter the desired 2-letter Country Code using the alphanumeric keys. Press Enter to establish the new Country Code and return to the Station Information screen.

- **FCC ID**

The (Federal Communications Commission) FCC ID field, when selected, displays a Numeric Keyboard screen (*Figure 4-6*). To change the FCC ID, enter the desired FCC ID using the number keys. Press Enter to establish the new FCC ID and return to the Station Information screen.

4.1.4 Call Sign

There are 2, mutually exclusive, methods for transmitting a station's call signs: Standard & Universal.

- **Standard**

NOTE: *The Standard Call Sign field is limited to four characters; all characters MUST be upper case.*

The Standard Call Sign field, when selected, displays a Alphanumeric Keyboard screen similar to *Figure 4-5*. To change the Standard Call Sign, enter the desired letters. Selecting shift, type the desired four-character Call Sign using the character keys. Press Enter to establish the new call sign and return to the Station Information screen.

- **Universal**

If a station's call sign is longer than 4 characters, or contains international symbols, the Universal Call sign should be used. The Universal Call Sign supports 2 different character sets: ISO8859-1 and Unicode. Use the drop down box (as shown in *Figure 4-4*) to select the desired character set. The Universal Call Sign field, when

selected, displays an Alphanumeric Keyboard screen similar to *Figure 4-5*. To change the Universal Call Sign, enter the desired letters. Press Enter to establish the new call sign and return to the Station Information screen. If "Append Band" is selected (checked), the current frequency band will be appended to the Universal Call Sign that is displayed at the receiver.

4.1.5 Station Slogan

There are 2 methods for transmitting a Station Slogan: Standard & Universal. Unlike the Call Sign, both methods can be transmitted simultaneously. However, if they are transmitted simultaneously, the entries must be identical. If "Enable both standard and universal formats" is selected (checked) then the Universal Station Slogan entry is grayed out and displays the contents of the Standard Slogan.

4.1.6 Standard Station Slogan

NOTE: The Standard Station Slogan field is limited to 56 characters.

The Standard Station Slogan tab, when selected, displays an Alphanumeric Keyboard screen, similar to *Figure 4-5*. To change the Standard Station Slogan, enter the characters using the Alphanumeric Keyboard. Press Enter to establish the new Standard Station Slogan and return to the Station Information screen.

The screenshot shows a 'Station Information' dialog box with several sections:

- Station Identification:** Contains 'FCC ID' (with '21' in the field) and 'Country Code'.
- Call Sign:** Has 'Standard' and 'Universal' tabs. The 'Universal' tab is active, showing 'HD-Radio' in the main field and a dropdown menu set to 'UNICODE'. Below it, 'Append "-FM"' is checked. The dropdown menu is open, showing 'UNICODE' and 'ISO 8859-1'.
- Station Slogan:** Has 'Standard' and 'Universal' tabs. The 'Standard' tab is active, showing 'HD Radio...www.HD-Radio.com' in the main field. Below it, 'Enable both standard and universal formats' is checked.
- Station Message:** Shows 'HD Radio...www.HD-Radio.com' in the main field and 'ISO 8859-1' in a dropdown menu. Below it, 'High Priority' is unchecked.

At the bottom are 'OK' and 'Cancel' buttons.

Figure 4-4 Universal Call Sign and Station Slogans

- **Universal Station Slogan**

If a station's slogan is longer than 56 characters, or contains international symbols, the Universal Station Slogan should be used. The Universal Station Slogan supports 2 different character sets: ISO8859-1 and Unicode. Use the drop down box (as shown in *Figure 4-4*) to select the desired character set. The Universal Station Slogan tab, when selected, displays an Alphanumeric Keyboard screen similar to *Figure 4-5*. To change the Universal Station Slogan, enter the desired characters and press Enter to establish the new slogan and return to the Station Information screen.

4.1.7 Station Message

The Station Message field is used to transmit messages other than the call sign or station slogan. The Station Message field supports 2 different character sets: ISO8859-1 and Unicode. Use the drop down box (as shown in *Figure 4-4*) to select the desired character set. The Station Message field, when selected, displays an Alphanumeric Keyboard screen similar to *Figure 4-5*. To change the Station Message, enter the desired characters and press Enter to establish the new Station Message and return to the Station Information screen.

Check the "High Priority" box to indicate to receivers that current message has a high priority.

Short Name		WXYZ							
1	2	3	4	5	6	7	8	9	0
Q	W	E	R	T	Y	U	I	O	P
	A	S	D	F	G	H	J	K	L
&	Z	X	C	V	B	N	M		?
:	/	-	\$	[]	@	.	<blank>	*
Shift	Prev Field	Next Field	Back Space	Erase Field	<-	->	Apply	Close	Enter

Figure 4-5 Alphanumeric Keyboard

4.1.8 Frequency

Frequency indicates the carrier center frequency. Select this option to change the carrier frequency. The Numeric Keyboard, *Figure 4-6*, is displayed. To change the frequency, enter the desired frequency using the number keys. Press Enter to establish the new frequency and return to the main menu.

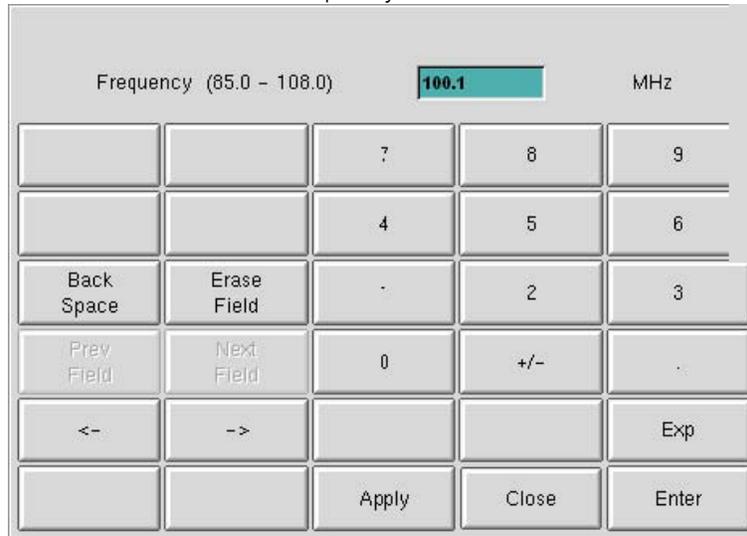

Figure 4-6 Numeric Keyboard

4.1.9 Band

The main menu frequency band indicator displays the exciter waveform selection: AM or FM.

4.1.10 Status Upper Section (Main Screen Upper Right)

The upper section displays current exciter state. Either Operational in Green or Non-Operational in Red.

4.1.11 Status Lower Section (Main Screen Upper Right)

The lower section displays current exciter Alarm state. Either No Alarm in Green or Alarm in Red. The Alarm can be cleared by selecting this area or the Station Interface section, see 4.5.1

4.1.12 Audio Bypass

The Audio Bypass indicator displays None, Bypass A, Bypass B or Bypass A&B. When Audio Bypass is selected, the Audio Bypass selection screen is displayed, (*Figure 4-7*).

NOTE: The EASU Audio toggle switches **MUST** be in the Auto position and Station Interface Outputs 13 and 14 must be connected to the EASU to enable this function.

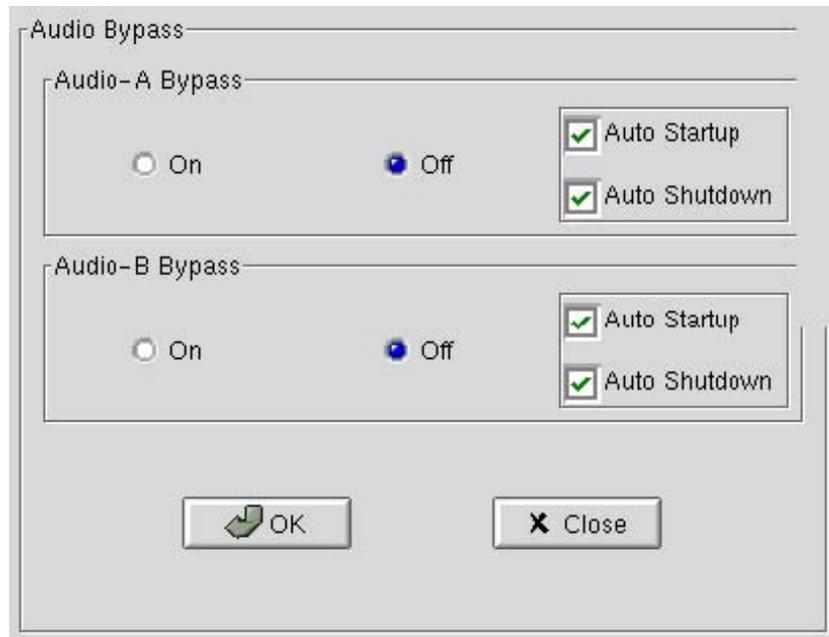

Figure 4-7 Audio Bypass Selection Screen

4.1.13 Audio-A Bypass

When on, Exciter Station Interface Output 13 closes to switch the Exciter Auxiliary Service Unit (EASU) to the Bypass position. When off, Exciter Station Interface Output 13 is determined by the software.

4.1.14 Audio-B Bypass

When on, Exciter Station Interface Output 14 closes to switch the Exciter Auxiliary Service Unit (EASU) to the Bypass position. When off, Exciter Station Interface Output 14 is determined by the software.

4.1.15 Auto Startup

When Auto Startup is selected, the audio bypass switches toggle to the delayed state to begin the audio ramp function (see paragraph 4.6.11). This overrides the Audio Bypass selection. If Auto Startup is not selected, the audio bypass switches toggle to the state defined by the Audio Bypass selection.

4.1.16 Auto Shutdown

When Auto Shutdown is selected, upon an error condition or receipt of a shutdown command, the audio bypass switches toggle to the Bypass state. This overrides the Audio Bypass selection. If Auto Shutdown is not selected, the audio bypass switches remain in the state defined by the Audio Bypass selection.

4.1.17 Digital Carrier Control

This indicator displays whether the digital subcarriers are on or off. All active IBOC digital subcarriers are added or removed by selecting On or Off.

4.1.18 FM Layer 1 Service Mode

The FM Layer 1 Service Mode indicator displays the current service mode of operation. If selected when not in BER mode, the Error Box (Figure 4-8) is displayed. Select OK to return to the main menu.

Note: This is only valid in the Bit Error Rate (BER) mode. See paragraph 4.8.1

Figure 4-8 BER Mode Dialog Box

When the FM Layer 1 Service Mode is selected in BER Mode, the FM Service Mode screen (Figure 4-9) is displayed. Select the primary service mode by placing a check in the desired Service Mode, MP1 through MP11.

Select the secondary service mode with a check in the desired Service Mode, MS1 through MS4.

NOTE: Secondary service modes are not accessible unless the primary service mode is MP5, MP6 or MP7.

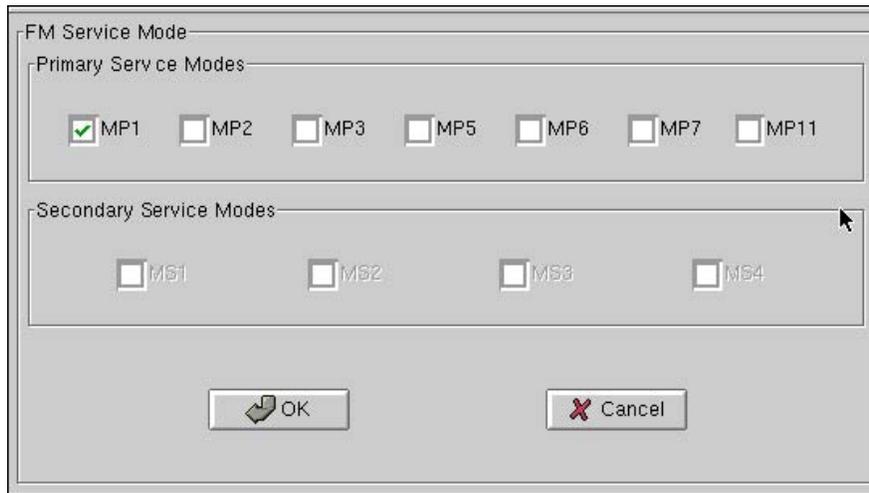

Figure 4-9 FM Service Mode Screen

4.1.19 Date and Time

Date and time displayed are local time. To obtain the Global Positioning System (GPS) and use it for display in the lower-left corner of the main menu, see Sync Local Time below. If the GPS is not connected to an antenna with access to GPS data, this window will display a time/date of 00:00:00 Jan 6, 1980 and increment from that time until the system attains GPS time lock.

When selected, the Local Time insertion screen is displayed, Figure 4-10. This screen is broken up into 4 different group boxes: Date & Time Settings, Time Zone, Daylight Savings Time, and GPS Time Synchronization.

Figure 4-10 Local Time Insertion Screen

Date & Time Settings: This area allows manual entry of local time.

Time Zone: This area allows setting of the local time zone. If the Country/Region selection is None/Other the zone will be set to Universal (UTC) and an offset from UTC can be entered using the "UTC Offset" drop down box. Values from -12 to 12 are valid and are entered using a numeric keypad similar to *Figure 4-6*.

Daylight Savings Time: This area allows the enabling of daylight savings time parameters if Time Zone Info selection is not None/Other. Checking "Enabled" will use daylight savings time based on the zone selected. Unchecking "Enabled" indicates to the receiver that daylight savings time is not to be used in regardless of the "Time Zone Info"/"Zone" selections. Changing the Time Zone Info and/or the DST Enable button will require the system to be restarted in order for the changes to be applied.

GPS Time Synchronization: Select "Sync Local Time" to synchronize the system time to the GPS time. The Status box gives the current status of the GPS.

NOTE: 1PPS from the EASU to the Exciter must be connected to sync to local time.

4.1.20 Exciter Status Bottom Right

4.1.20.1 Status Section

The status section displays current exciter status. Error conditions are displayed in red and warning conditions are displayed in green. Select this area or the System Status Log button to view the status history as shown in *Figure 4-11*.

As seen in *Figure 4-11* several warnings appear. These indicate that the GPS is not time locked. The GPS antenna should be check for proper view of the sky. At times it will take time for lock to be acquired so you may have to wait for GPS lock.

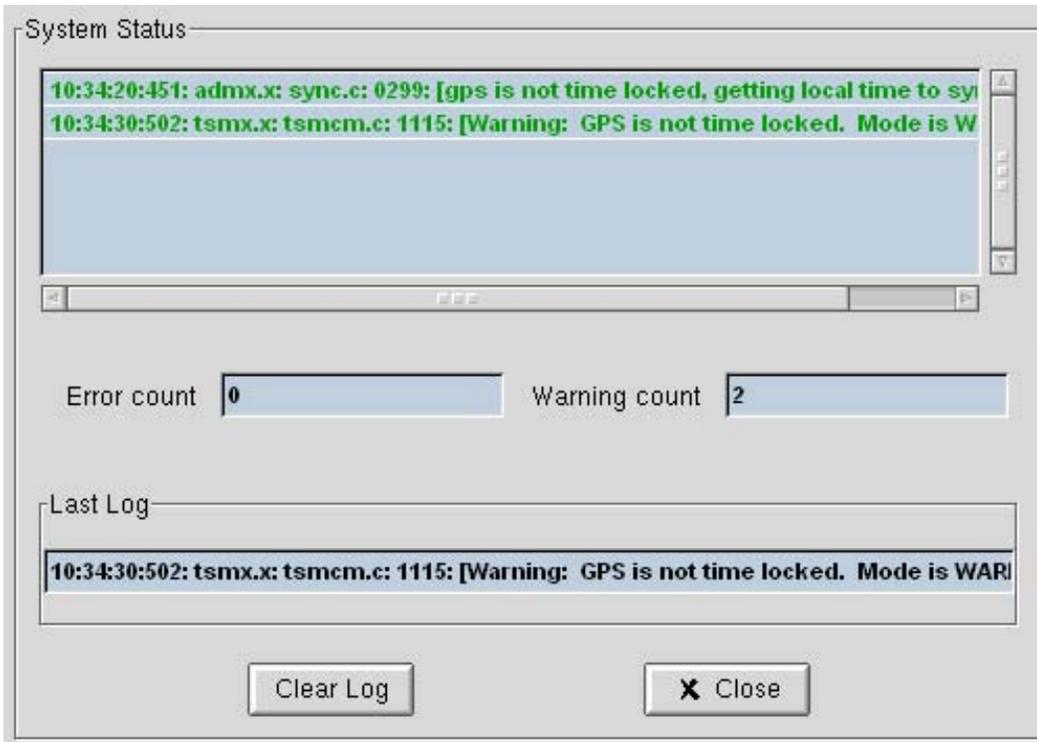

Figure 4-11 System Status Log Screen

4.2 System Tab Control Buttons

Figure 4-1 shows the GUI main menu System Tab screen: This screen is displayed upon startup. Descriptions of control buttons displayed on the System Tab of this screen are provided in the following subparagraphs.

4.2.1 Shutdown

The Shutdown control screen, Figure 4-12 Exciter Shutdown Control Screen is used to shutdown the exciter. If power is to be removed, select Shutdown and press OK. This will halt the OS. Wait until the display indicates OK to power down.

If the OS is to be restarted, select OS Restart and press OK. The system will reboot back to the default program. If the application is to be exited and restarted, select Restart and press OK to exit and rerun the program. If the application is to be exited and a console session started, select Console and press OK to exit and start the session.

NOTE: See paragraph 6.4 and/or 6.5 for detailed shutdown options.

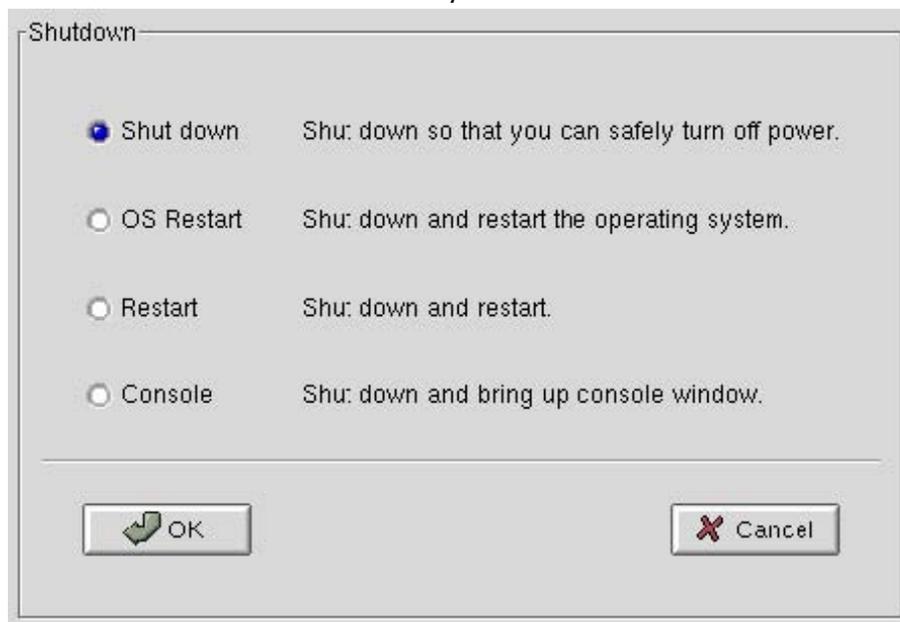

Figure 4-12 Exciter Shutdown Control Screen

4.2.2 Configuration

The System Configuration button provides access to the system configuration screen, Figure 4-13.

4.2.3 Config Channel

To view the rate of the logical channels select View Config. When selected, the Channel Configuration screen will be displayed, Figure 4-14.

4.2.3.1 Channel Configuration

The Channel Configuration screen is used to view the amount of bandwidth given to each service available; Audio, Station information, or Data. These settings are repeated for all logical channels available:

Channel 1 – P1 Channel 2 – P2

Channel 3 – P3 Channel 4 -SIS

4.2.3.2 Carrier Configuration

Carrier Configuration displays the Layer 1 current configuration settings.

4.2.3.3 Mode

Mode displays the Service Mode.

4.2.3.4 Characteristics

The Characteristics group box displays the size of the logical channel PDU, the rate at which the PDU is sent, and the bandwidth (or average rate) of the PDU for each logical channel.

4.2.3.5 Partitioning

The Partitioning group box displays information pertaining to how each logical channel is partitioned between Main Program Audio (MPA), and Advanced Application Services (AAS).

MPA Size allows the selection of the amount of bytes to be used for the Main Program Audio (MPA).

4.2.3.6 Previous

Select Previous Page to scroll through all logical channels.

4.2.3.7 Next

Select Next Page to scroll through all logical channels.

4.2.4 Save Config

Selecting Save Config will create a file of the current system mode configuration files(freq, analog delay...) so that these configurations can be recalled at start-up.

4.2.5 Configuration Selection

Select the number adjacent to Enter Item No. for selected configuration. When selected, the Numeric Keyboard screen, similar to *Figure 4-6*, is displayed. To change the configuration value, enter the desired configuration value using the number keys. Press Enter to establish the new configuration. When a selection is made, the user is prompted to restart the system. See *Figure 4-13* for available choices.

4.2.6 Restart Options

Selecting Load Saved Configuration , the current system mode configuration files will be saved for use upon startup.

Selecting Load Default Configuration will use the default configuration values when restarted, from this screen only.

4.2.7 Restart

Selecting Restart will restart the system. Selecting Close will exit this window.

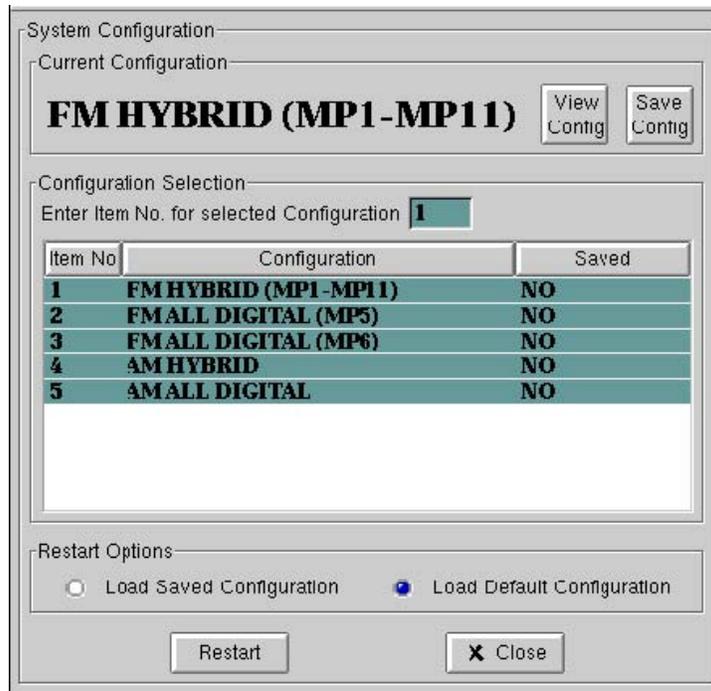

Figure 4-13 System Configuration Screens

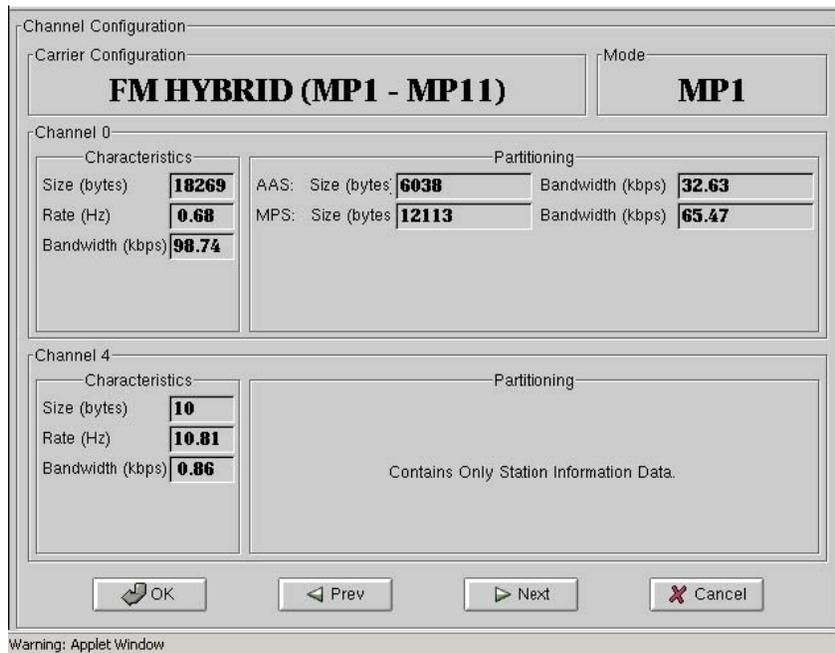

Figure 4-14 Channel Configuration Screen

4.2.8 Versions

When selected a display of the present software/firmware/Motherboard configuration will be shown, *Figure 4-15*. This information will not be valid until after the system has indicated it is Operational.

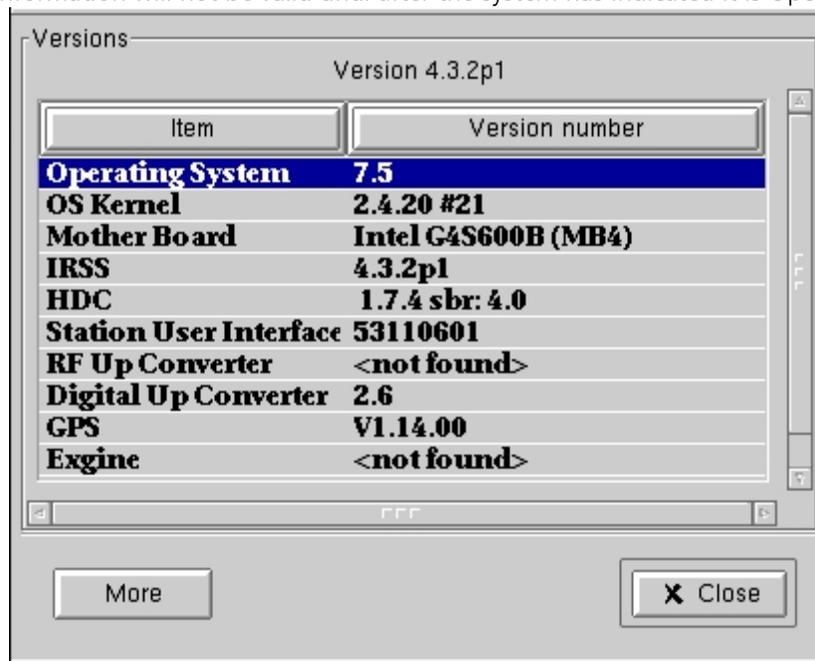

Figure 4-15 Versions Screen

To view additional detailed information, select the More button and the display in *Figure 4-16*.

Figure 4-16 Versions More Screen

4.2.9 Configure Password

When selected the user will be prompted to enter the present password to gain access to the password configure screen, *Figure 4-17*.

Configure Password

New Password: [Masked Password]

Retype Password: [Masked Password]

Timeout in seconds: 3611

OK Cancel

Figure 4-17 Password Screen

The new password can now be entered. Confirm the new password by entering it again in the Retype Password area.

Timeout in seconds value denotes how long, after entering a valid password, you have unlimited access before you are again prompted to enter the password again. If the checkbox is unchecked the access time has no limit and is valid until changed or the exciter is rebooted.

4.2.10 Command

The System Command screen, *Figure 4-18*, is displayed when selected.

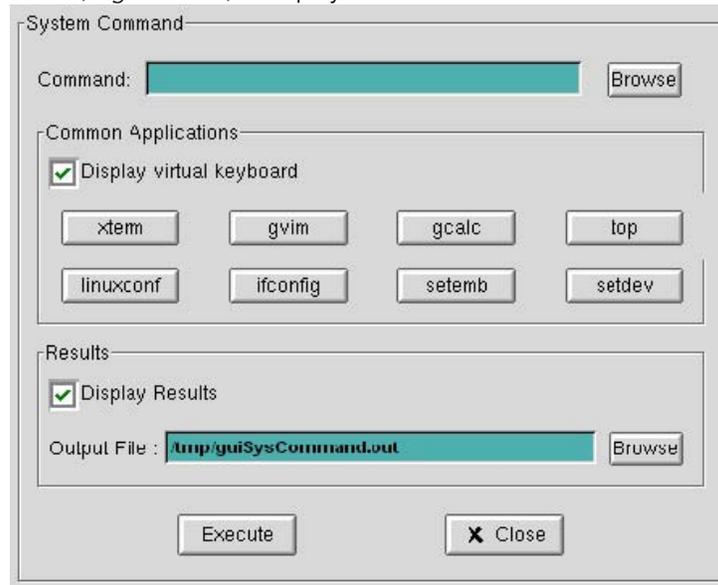

Figure 4-18 System Command Screen

4.2.11 Command/Results

To execute a linux system command (ls, pwd ...), enter the command here. The results of the command can be displayed immediately by placing a check mark in the Display Results box. The results can also go to a file as defined by the file name in the Results/Output File: line. To execute the command select Execute.

If the Display Results option is selected, *Figure 4-20* will now be displayed. Select Close to return to the Exciter Submenu screen.

4.2.12 Browse

This button can be selected to choose a file/directory (for execution or results storage). *Figure 4-19* will appear. Press OK to enter the selection and return to the System Command screen.

4.2.13 Common Applications Display Virtual Keyboard

This button, if selected will display a virtual keyboard (*Figure 4-21*) on the display when the common application is run. This is useful only if a keyboard is not connected to the exciter.

4.2.14 Common Applications Xterm

This button, if selected, will display an Xterm Window, (*Figure 4-22*). The user can now type commands. When done, the user types exit and presses return to close the window and return to the System Command window.

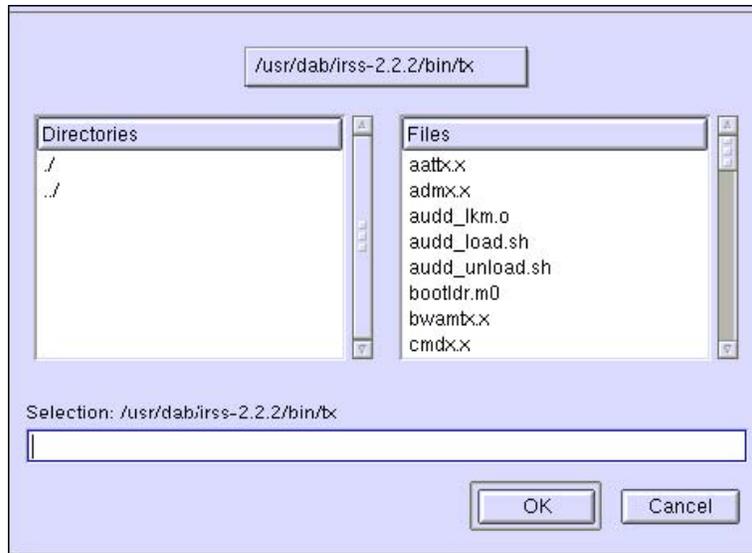

Figure 4-19 Browse Screen

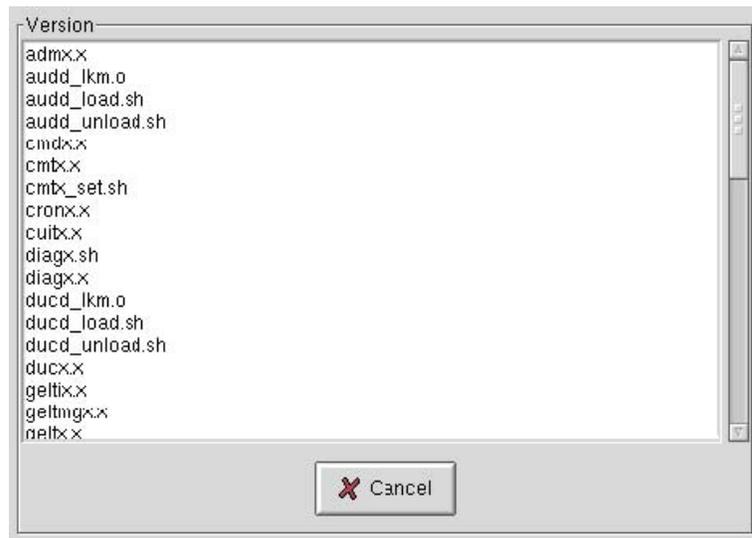

Figure 4-20 Command Results Display

Figure 4-21 Virtual Keyboard

Figure 4-24 Linuxconf Screen

4.2.17 Common Applications gcalc

This button, if selected, will display a graphical calculator application (*Figure 4-25*). The calculator is now displayed. Select file/exit to return to the System command screen.

Figure 4-25 Graphical Calculator Screen

4.2.18 Common Applications Top

This button, if selected, will display a summary of the processor usage (*Figure 4-26*). Press close when finished..

Figure 4-27 ifconfig Screen

4.2.19 Common Applications ifconfig

This button, if selected, will display a summary of the processor network configuration (*Figure 4-27*). Press close to quit and return to the System Command window.

4.2.20 Common Applications setemb

This button, if selected, will set the system to embedded mode. Press close to quit and return to the System Command window. The system is now in Embedded mode, see paragraph 6.1.2 Startup for embedded mode operation description.

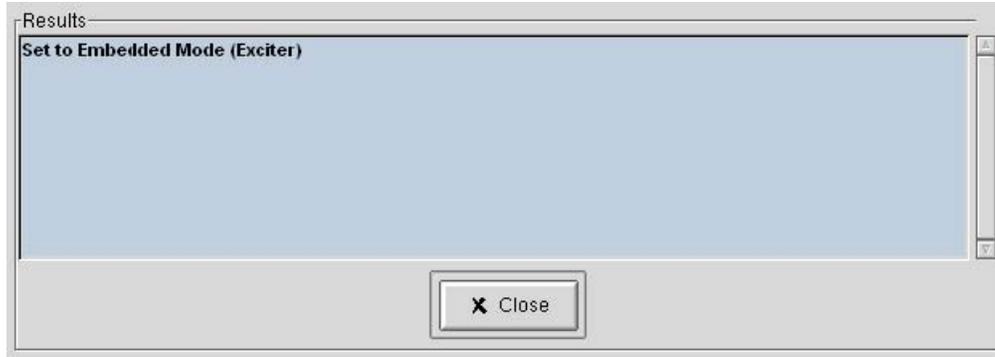

Figure 4-28 Dialog setemb Screen

4.2.21 Common Applications setdev

This button, if selected, will set the system to development mode. Press close to quit and return to the System Command window. The system is now in Development mode.

Figure 4-29 Dialog setemb Screen

4.2.22 GPS Data

The GPS Data button, when selected, displays the GPS Data screen shown in *Figure 4-30*. This screen displays GPS Version, status, and allows setting of the GPS values.

If the GPS mode is in the Not Locked mode (no antenna attached) all the position information can be edited. This information will not be used for transmission unless the system is reset. If the information is changed a warning will be displayed, *Figure 4-31* System Reset Warning Screen, as a reminder.

The screenshot shows a 'GPS Data' window with the following sections:

- Version:** \$VERS, V1.14.00, Sep 30 2003
09:48:52, 8:6/10:10, 380-3001, 00°0F
- Operational Mode:** Warm Up
- Position:**

	Hemisphere	Degrees	Minutes
Latitude	N	39	11.1218
Longitude	W	76	48.3805
Altitude	90.83 (meters)		
- GPS Time:** Day 006 of 1980, 02:10:07 GPS
Figure of Merit = 10 ms < ETE
- Antenna Delay:** Delay 0 (ns)

Buttons at the bottom: OK, Apply, Cancel.

Figure 4-30 GPS Data Screen

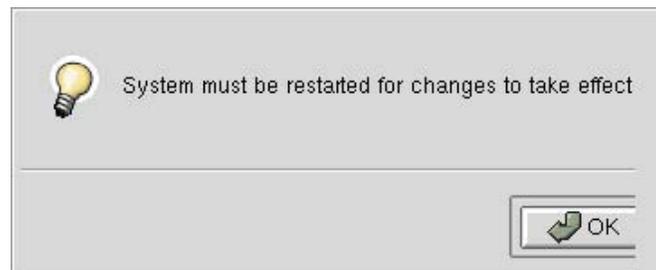

Figure 4-31 System Reset Warning Screen

4.2.23 GPS Antenna Delay

This variable is based on GPS cable type and length. Delay values for recommended cable types are listed in *Table 4-1*.

Table 4-1 GPS Cabling Delays

Cable Type	Delay Value
Belden 9311 (RG-58)	4.36 ns/m (1.33 ns/ft)
Belden 8267 (RG-213)	4.99 ns/m (1.52 ns/ft)
Belden 9104 (RG-59)	4.00 ns/m (1.22 ns/ft)
Belden 9913 (RG-8)	3.90 ns/m (1.19 ns/ft)

To determine the proper delay value, multiply the delay value from *Table 4-1* by the length of cable used. For example, if the antenna system includes 50 ft of RG-58 cable, the total cable delay is:

50 ft x 1.33 ns/ft = 66.5 ns

When entering the data round the value to the nearest nanosecond (ns).

When Antenna Delay is selected, *Figure 4-6*, the Numeric Keyboard screen is displayed, *Figure 4-6*. To change the delay value enter the desired delay value using the number keys. Press Enter to establish the new delay value and return to the GPS Data screen.

4.2.24 Local Time

See Paragraph 4.1.19.

4.3 Log Tab Control Buttons

Figure 4-33 shows the GUI main screen Log Tab. Descriptions of control buttons displayed on the Log Tab of this screen are provided in the following subparagraphs.

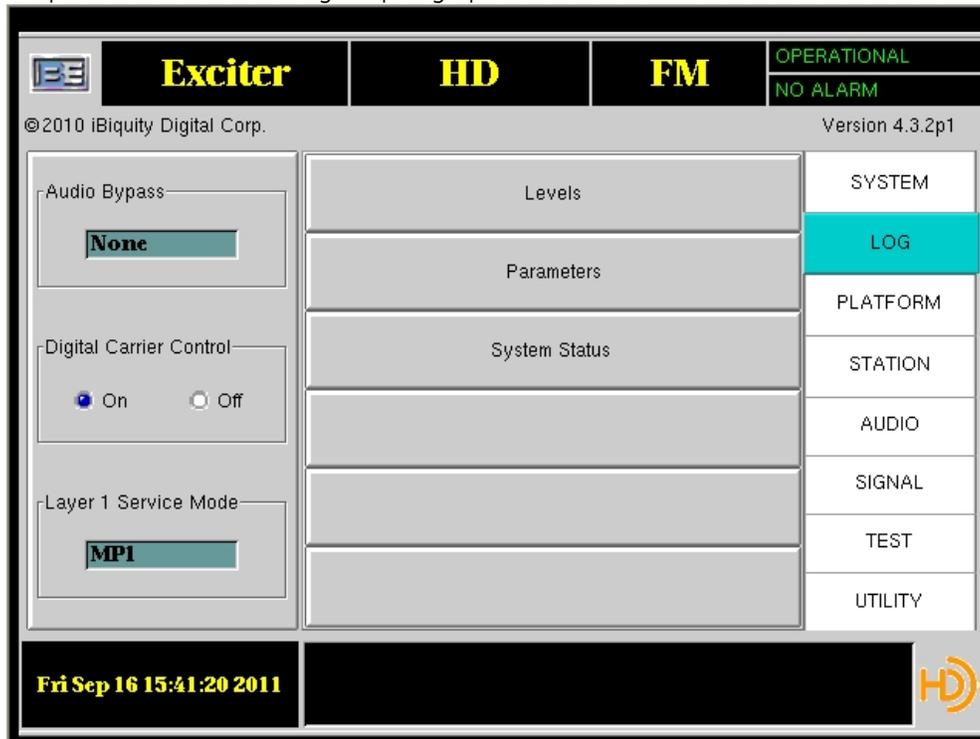

Figure 4-32 Reference Exciter GUI Interface Log Tab

4.3.1 Levels

Select Levels from the Log Tab main menu, to view and update log level information. The Log Levels screen, *Figure 4-33*, is displayed. To set the logging level for an individual process, set the Log Level to a value 0 through 7 (0=Off, 7=Max). To set the description associated with the screen logging of each process (not to a file), increase the number under the Verbose Level column (0=Off, 7=Max) to the appropriate level. This sets the logging stored in file /mnt/data/irss.log. This file is archived to a date associated file. For example: /mnt/data/02-19-03/irss02:33:00.log.

4.3.2 Previous Page

Select Previous Page to scroll backward through exciter processes.

4.3.3 Next Page

Select Next Page to scroll forward through exciter processes.

4.3.4 All Log Levels

To set the log level to the same value for all processes, select All Log Levels. *Figure 4-34* is displayed. Select the level desired for all processes and press Close to enter the new values.

This will log all data with a log level of the selected value or lower.

4.3.5 All Verbose Levels

To set the verbose level to the same value for all processes, select All Verbose Levels to display the screen shown in *Figure 4-34*. Select the desired level and click Close to activate the new level.

This will print all data with a verbose level of the selected value or lower.

4.3.6 Exclusive Level

Exclusive Level, when selected will only print data that is the same level as the level selected (not lower or higher).

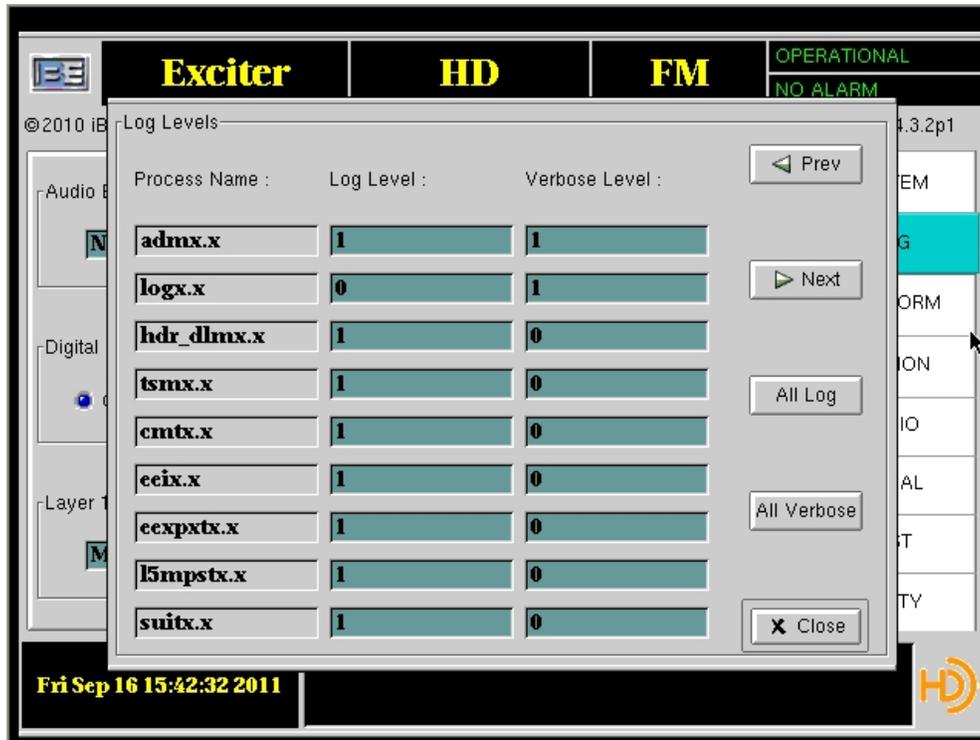

Figure 4-33 Log Level Screen

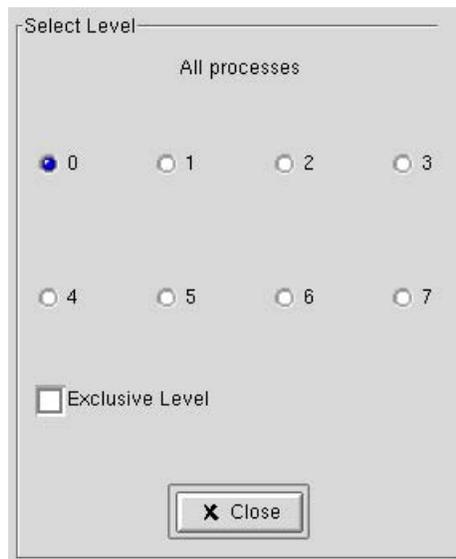

Figure 4-34 Select Level Screen

4.3.7 Parameters

Select Parameters from the Log main menu. The Log Parameters screen (*Figure 4-35*) is displayed. This screen will display the present logging utilization and allow for the setting of warning parameters.

4.3.8 Warning Message Rate

When Warning Message Rate is selected, the Numeric Keyboard screen is displayed (*Figure 4-6*). To set how often the user is warned that the maximum log rates have been exceeded, enter the desired time in seconds. Press enter to use the new value and return to the Log Parameters screen.

4.3.9 Window Size (sec):

When Window Size is selected, the Numeric Keyboard screen is displayed (*Figure 4-6*). To set the duration over which the logging rate is calculated, enter the desired time in seconds. Press enter to use the new value and return to the Log Parameters screen.

4.3.10 ASCII Log Rate (bytes/sec):

ASCII Log Rate displays the instantaneous amount of ASCII logging.

4.3.11 ASCII Log Utilization:

ASCII Log Utilization displays the instantaneous amount of ASCII logging represented as a percentage of the maximum rate.

4.3.12 ASCII Log Max Rate:

When Max ASCII Log Rate is selected, the Numeric Keyboard screen is displayed (*Figure 4-6*). To set the log rate for which, if exceeded, a warning will be issued, enter the desired rate. Press enter to use the new value and return to the Log Parameters screen.

4.3.13 Binary Log Rate (bytes/sec):

Binary Log Rate displays the instantaneous amount of Binary logging.

4.3.14 Binary Log Utilization:

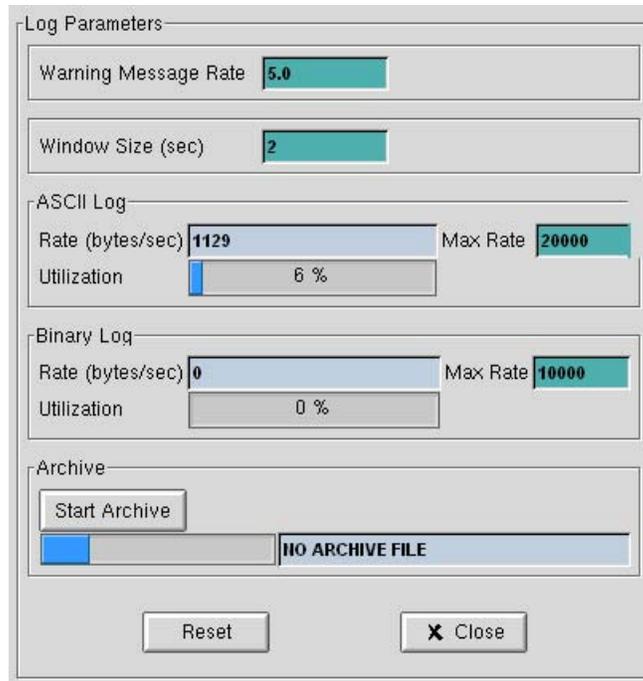

Binary Log Utilization displays the instantaneous amount of Binary logging represented as a percentage of the Maximum rate.

4.3.15 Binary Log Max Rate:

When Max Binary Log Rate is selected, the Numeric Keyboard screen is displayed similar to *Figure 4-6*. To set the log rate for which, if exceeded, a warning will be issued, enter the desired rate. Press enter to use the new value and return to the Log Parameters screen.

4.3.16 Start Archive

When Start Archive is selected, all log files in the /mnt/data path along with any core files in the bin/tx path will be collected and placed in the specified archived file.

The screenshot shows a 'Log Parameters' window with several sections:

- Warning Message Rate:** A text input field containing the value '5.0'.
- Window Size (sec):** A text input field containing the value '2'.
- ASCII Log:**
 - Rate (bytes/sec):** A text input field containing '1129'.
 - Max Rate:** A text input field containing '20000'.
 - Utilization:** A progress bar showing 6% utilization.
- Binary Log:**
 - Rate (bytes/sec):** A text input field containing '0'.
 - Max Rate:** A text input field containing '10000'.
 - Utilization:** A progress bar showing 0% utilization.
- Archive:**
 - A 'Start Archive' button.
 - A progress bar that is mostly empty, with the text 'NO ARCHIVE FILE' displayed on the right side.

At the bottom of the window are two buttons: 'Reset' and 'X Close'.

Figure 4-35 Log Parameters Screen

4.3.17 System Status

See paragraph 4.1.20.1.

4.4 Platform Tab Control Buttons

Figure 4-32 shows the GUI main screen Platform Tab. Descriptions of control buttons displayed on the Platform Tab of this screen are provided in the following subparagraphs.

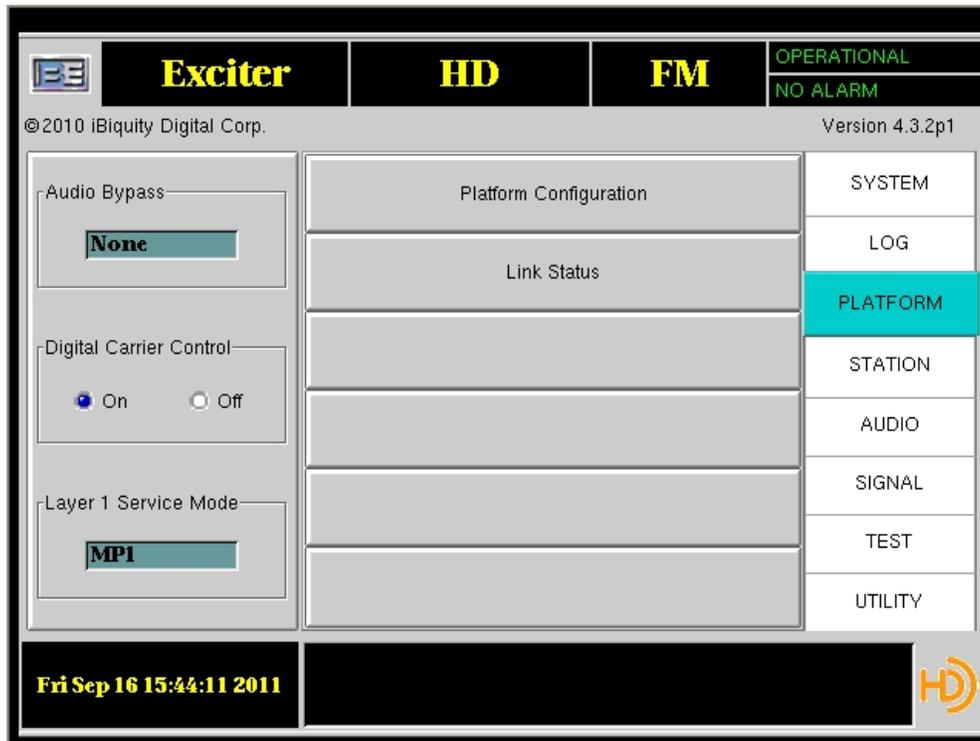

Figure 4-36 Reference Exciter GUI Interface Platform Tab

4.4.1 Platform Configuration

See paragraph 4.1.1.

4.4.2 Link Status

The Link Status window provides status all active TCP/UDP Link connections, *Figure 4-37*.

Each Link (e.g. I2E, E2x) window is divided into 2 panels: a send panel and a receive panel. In both cases, statistics are displayed for all the messages received on the indicated connection. The connection being examined is displayed in the upper left corner. In *Figure 4-38* it is the I2E link. In addition, an error count for a number of different types of standard failures is also displayed.

Each link has its own window. The user can scroll through each link by pressing the "Prev" or "Next" button. The number and types of windows available will depend on the platform type. For example, the E2X window is not displayed on an Exciter platform because it does not exist.

Figure 4-38 shows the GUI main screen Station Tab. Descriptions of control buttons displayed on the Station Tab of this screen are provided in the following subparagraphs.

Link Status

Importer to Exporter (I2E) Link

Protocol **TCP** (Connected)

Figure 4-37 Link Status Activity Monitor Screen 4.5 Station Tab Control Buttons

4.5 Station Tab Control Buttons

Figure 4-38 shows the GUI main screen Station Tab.

Descriptions of control buttons displayed on the Station Tab of this screen are provided in the following subparagraphs.

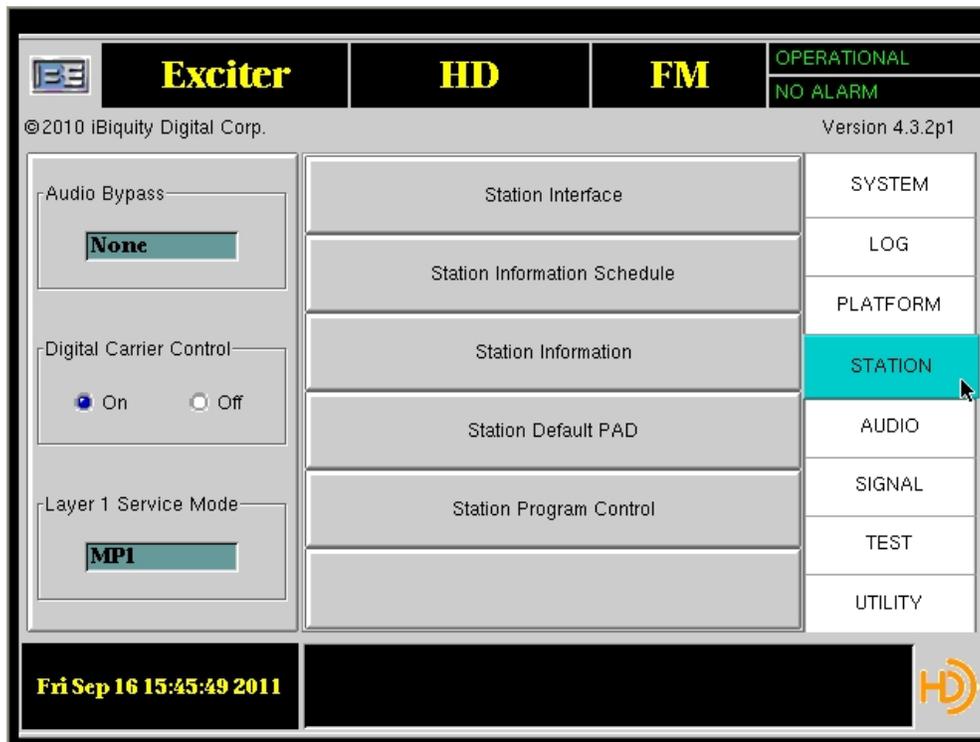

Figure 4-38 Reference Exciter GUI Interface Station Tab

4.5.1 Station Interface

Select Station Interface, to display the Station Interface screen, *Figure 4-39*.

The current state of all 16 inputs is shown in the left column. For inputs 1 through 14, a high-to-low transition will initiate the corresponding action. For inputs 15 and 16, the input must be held low for at least 5 seconds, then, on the ensuing positive edge, the corresponding action is executed. The current status is shown in the right-hand column. To clear any present alarm select Clear State Alarms. To set the Non-operational state back to Operational select Clear State Non-operational. This will place the system back into a operational state until the next error is encountered.

When Start Test is selected, the outputs will all be set to a low state, and a high state will be walked through spending a second in each state. The inputs will still be continuously monitored. When Stop Test is selected, the outputs will return to the values stored prior to entering test mode. When Enable Watchdog is selected, the Watchdog timer on the Station Interface Card (SIC) will be enabled. When enabled, the SIC will monitor the serial port, if there is no activity for 1 second the host processor is assumed to be locked up. The Audio bypass relays will be set to Bypass, the system operational relay will be opened and the exciter will be rebooted.

Press Close to return to the Main Menu.

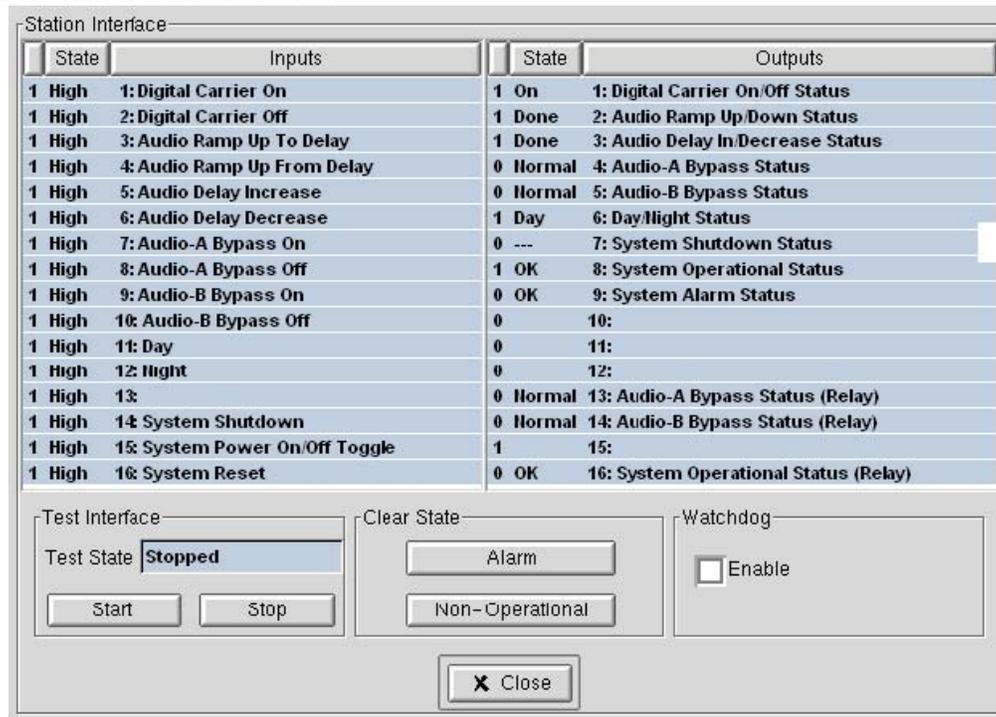

Figure 4-39 Station Interface Display Screen

4.5.2 Station Information Schedule

The Station Information Schedule, *Figure 4-40*, is displayed when selected from the main menu.

Select the block to be changed and the payload selection menu will be displayed, *Figure 4-41*. Select the payload option desired, and press OK to enter the new settings and return to the main menu.

Station Information Schedule		
Block #	Payload 1	Payload 2
0	CALLSIGN STANDARD	STATION ID
1	SLOGAN STANDARD	
2	CALLSIGN STANDARD	STATION ID
3	SLOGAN STANDARD	
4	SLOGAN STANDARD	
5	CALLSIGN STANDARD	STATION LOCATION
6	CALLSIGN STANDARD	STATION ID
7	CALLSIGN STANDARD	STATION LOCATION

Figure 4-40 Station Information Schedule Screen

Care must be taken when selecting payload options as some options are not compatible with other options. For example Slogan Universal requires both payloads, so Payload 2 must be left blank. If an incompatible payload is selected a warning message similar to *Figure 4-42* will be displayed.

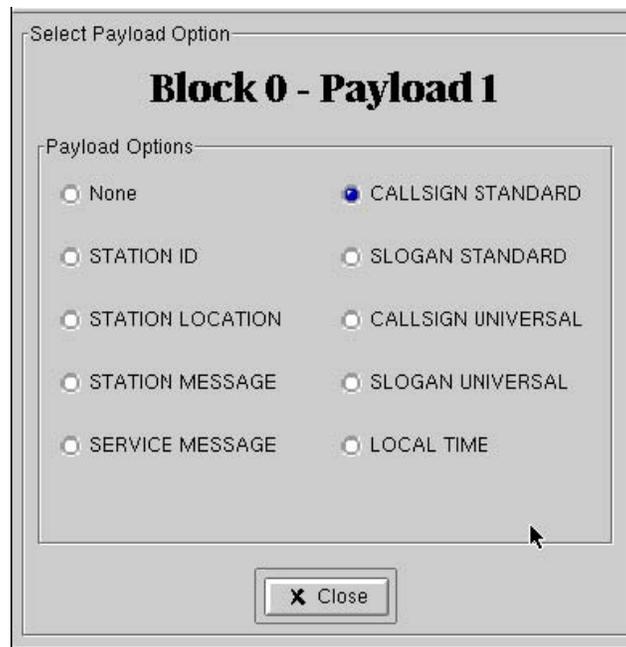

Figure 4-41 Station Information Payload Selection

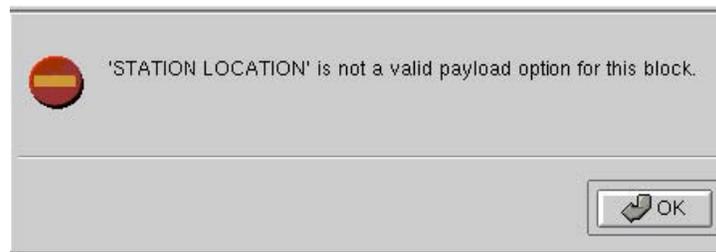

Figure 4-42 Incompatible payload option warning message

4.5.3 Station Information

See paragraph 4.1.2.

4.5.4 Station Default PAD

The Station's default PAD information, *Figure 4-43*, is displayed when selected from the Station main menu. This menu has four tabs: General, Comment, Commercial, and Last Message Sent. Each tab is described in turn.

4.5.5 General

Use this tab shown in *Figure 4-43* to enter the Title, Artist, Album, and Genre information by selecting the desired field and using the alphanumeric keyboard similar to the one in *Figure 4-5*. To include this information as part of the PAD message make sure the "Enable" box is checked. Clearing the Enable box will exclude this information from being sent.

Note: Even though Genre is a text field, the user should select one of the types defined in the IDS standard, if possible.

The image shows a software dialog box titled "Station Default PAD". It has four tabs: "General" (selected), "Comment", "Commercial", and "Last Message Sent". In the "General" tab, there is a checked checkbox labeled "Enable". Below it are four text input fields: "Title" (containing "HD Radio...www.HD-Radio.com"), "Artist", "Album", and "Genre". At the bottom of the dialog are three buttons: "Send", "Update", and "Close".

Figure 4-43 Station Default PAD (General Tab)

4.5.6 Comment

Use this tab shown in *Figure 4-44* to enter the Comment Title and Comment Description information by selecting the desired field and using the alphanumeric keyboard similar to the one in *Figure 4-5*. To include this information as part of the PAD message make sure the "Enable" box is checked. Clearing the Enable box will exclude this information from being sent.

The screenshot shows a software window titled "Station Default PAD". At the top, there are four tabs: "General", "Comment" (which is highlighted in blue), "Commercial", and "Last Message Sent". Below the tabs, there is a section with an "Enable" checkbox, which is currently unchecked. Underneath, there are two text input fields. The first is labeled "Title" and contains the text "Comment Title". The second is labeled "Description" and contains the text "Comment Description". At the bottom of the window, there are three buttons: "Send", "Update", and "Close".

Figure 4-44 Station Default PAD (Comment Tab)

4.5.7 Commercial

Use this tab shown in *Figure 4-45* to enter the Commercial information by selecting the desired field and using the alphanumeric keyboard similar to the one in *Figure 4-5*. To include this information as part of the PAD message make sure the "Enable" box is checked. Clearing the Enable box will exclude this information from being sent.

The screenshot shows a software window titled "Station Default PAD" with four tabs: "General", "Comment", "Commercial" (which is selected and highlighted in blue), and "Last Message Sent". The "Commercial" tab contains the following fields:

- Enable
- Price: **\$10.00**
- Contact URL: **http://www.somedeal.com**
- Valid Until: **Oct** (dropdown), **31** (dropdown), **2011** (dropdown)
- Received As: **00 Other** (dropdown)
- Name of Seller: **Seller Name**
- Description: **Description** (text area)

At the bottom of the window are three buttons: "Send", "Update", and "Close".

Figure 4-45 Station Default PAD (Commercial Tab)

4.5.8 Last Message Sent

Use this tab, shown in *Figure 4-46*, to view the last message sent in ID3 format.

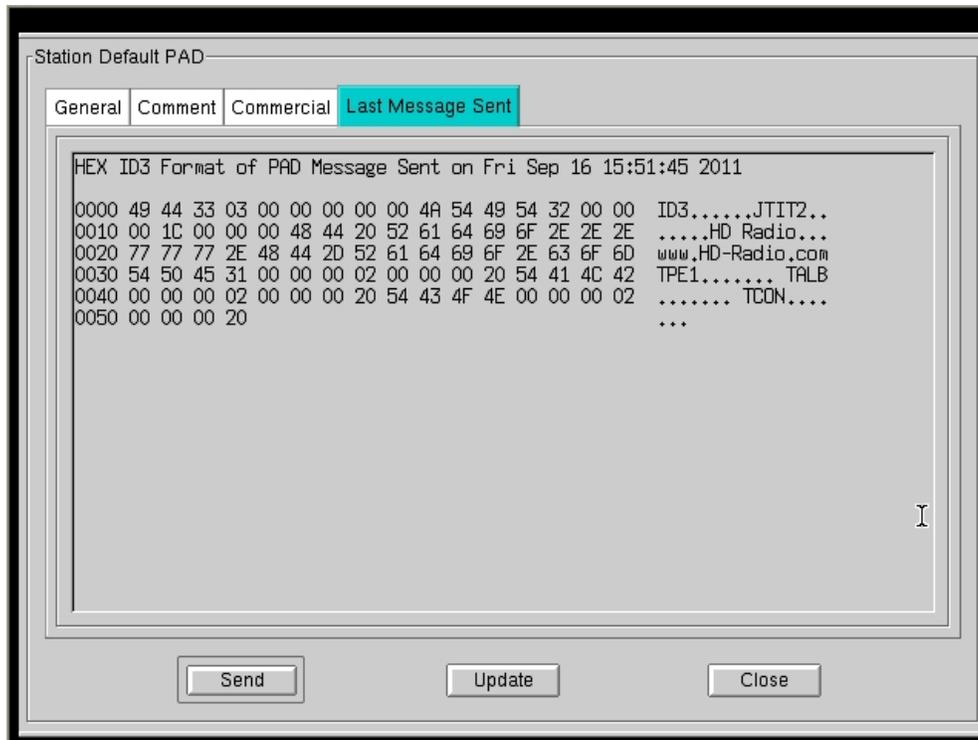

Figure 4-46 Station Default PAD (Last Message Sent Tab)

In addition to the four tabs, the Station Default PAD screen also has four buttons: Send, Update, Advanced, and Cancel.

4.5.9 Send

When pressed, the current information in the General, Comment and Commercial screens, if enabled, will be queued for transmission as indicated by the screen shown in *Figure 4-47*.

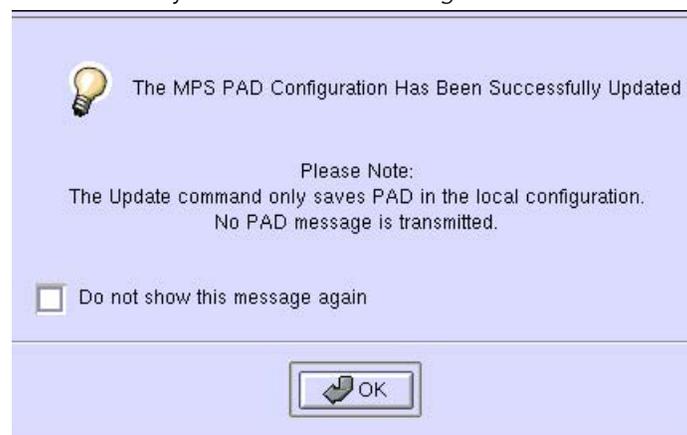

Figure 4-47 PAD Information Sent acknowledgement message.

4.5.10 Update

When pressed, the current information in the General, Comment, and Commercial screens is saved as part of the default configuration for that Service Mode as indicated by the acknowledgement message shown in *Figure 4-48*.

Figure 4-48 PAD Configuration update acknowledgement

4.5.11 Cancel

Use Cancel to return to the main Station screen.

4.5.12 Station Program Control

The station's programming genre selection, *Figure 4-49*, is displayed when the Select Station Program Control is selected.

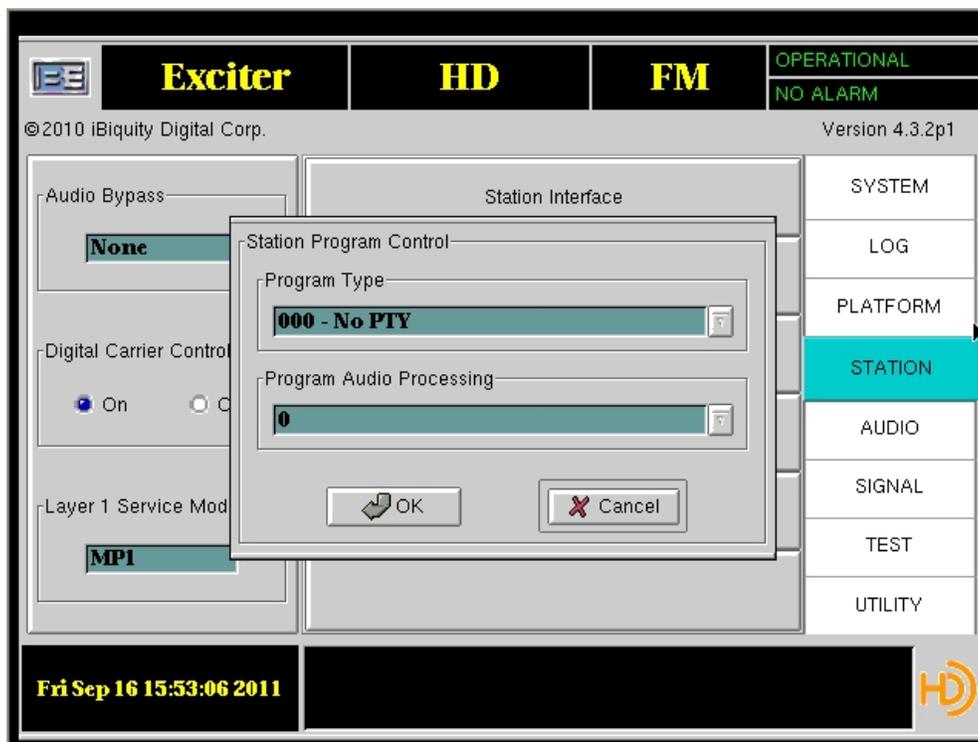

Figure 4-49 Station Program Control screen

This menu allows the user to send a genre type embedded in the main program audio bit-stream. Once “Enable” is checked, the genre information will be sent as part of the main program audio bit-stream. To change the genre, use the pull down menu and select the genre type most appropriate. The Program Audio Processing box is used to set the 5-bit value in the Station Information Guide (SIG) and is application specific.

4.6 Audio Tab Control Buttons

Figure 4-50 shows the GUI main screen Audio Tab. Descriptions of control buttons displayed on the Audio Tab of this screen are provided in the following subparagraphs.

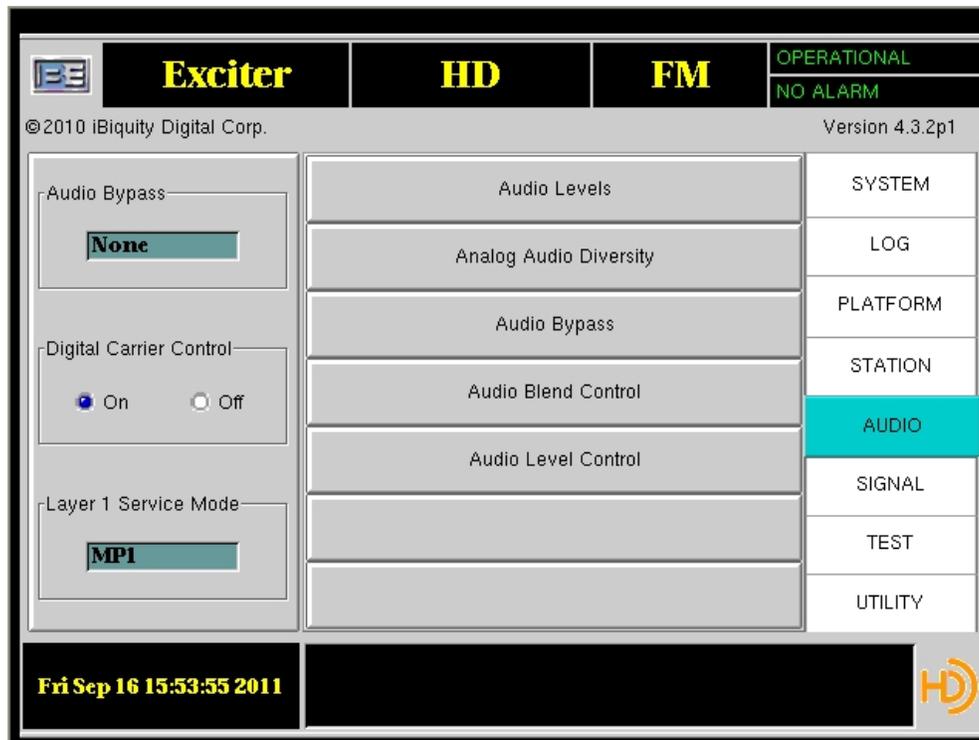

Figure 4-50 Reference Exciter GUI Interface Audio Tab

4.6.1 Audio Levels

This button, if selected, will display a dynamic Audio Monitor, *Figure 4-51*.

4.6.2 Range (dB)

Select this option to change the Minimum value (left most value of audio bars) of the audio Bar graph, the Numeric Keyboard (*Figure 4-6*) is displayed. To change the Range, in dB down from Full Scale, enter the new value using the number keys.

4.6.3 Average (sec)

Select this option to change the time over which the average of audio power is taken to be displayed as the green portion of the audio Bar graph. The Numeric Keyboard (*Figure 4-6*) is displayed. To change the average time, enter the new value using the number keys.

NOTE: *If this number is larger than the peak and/or peak hold numbers they will be changed to equal the Average time.*

4.6.4 Peak (sec)

Select this option to change the time over which the peak of audio power is taken to be displayed as the Yellow portion of the audio Bar graph. The Numeric Keyboard (*Figure 4-6*) is displayed. To change the Peak time, enter the new value using the number keys.

NOTE: If this number is larger than the peak hold number it will be changed to equal the Peak time.

4.6.5 Peak Hold (sec)

Select this option to change the time over which the peak of audio power is taken to be displayed as the Red portion of the audio Bar graph. The Numeric Keyboard (Figure 4-6) is displayed. To change the Peak Hold time, enter the new value using the number keys.

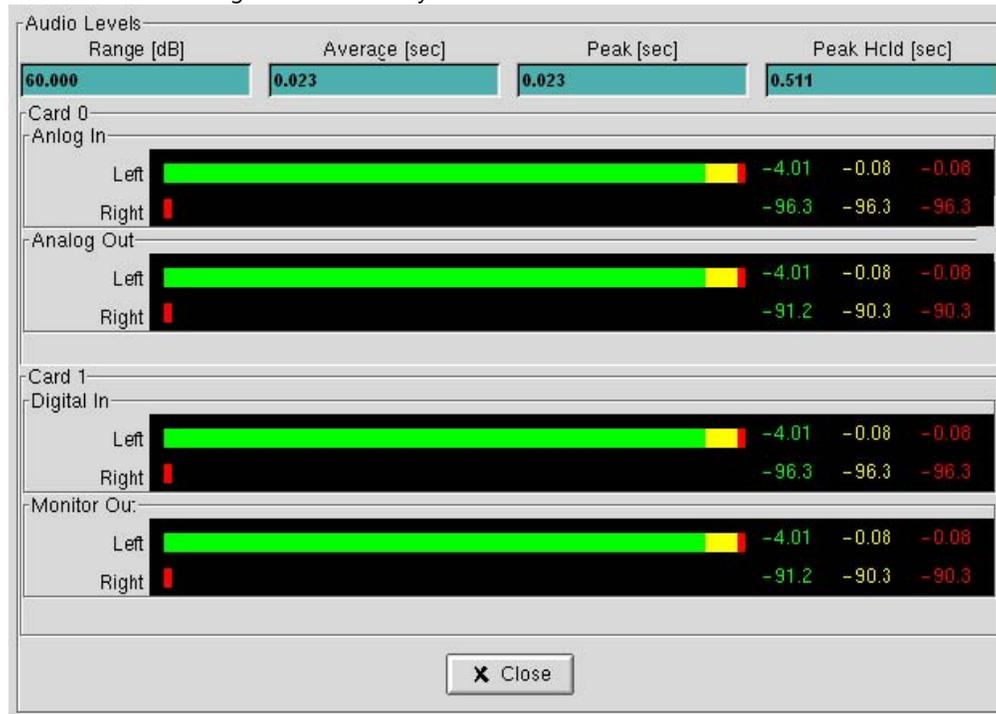

Figure 4-51 Audio Levels Screen

4.6.6 Analog Audio Diversity

This button, if selected, will display the Analog Audio Diversity Screen, *Figure 4-52*.

Figure 4-52 Analog Diversity Delay Screen

4.6.7 Delay

The Delay indicator displays the number of 44.1-kHz audio samples (22.67 us/sample) analog audio is to be delayed if the Analog Audio Diversity Status is 100%.

The Delay field, when selected, displays the Numeric Keyboard screen similar to *Figure 4-6*. To change the delay value, enter the desired Delay Value using the number keys. Press *Enter* to establish the new delay value and return to the Analog Audio Diversity screen.

4.6.8 Increment

The Increment indicator displays the number of 44.1-kHz audio samples the delay value is changed when the up or down arrow buttons are selected.

The Increment field, when selected, displays the Numeric Keyboard screen to *Figure 4-6*. To change the increment value, enter the desired increment value using the number keys. Press *Enter* to establish the new increment value and return to the Analog Audio Diversity screen.

4.6.9 Delay in seconds

The Delay-in-seconds indicator displays the total analog audio delay when the Audio Diversity Delay Status is 100%.

4.6.10 Current Delay in seconds

The Current Delay-in-seconds indicator displays the current analog audio delay in seconds. Depending on the delay and the rate, the current value should either be equal to or converging to the delay value.

4.6.11 Automatic Adjustment Ramp Up

Ramp Up, when selected, begins a delay increase using the rate value from 0 to the desired delay value.

4.6.12 Automatic Adjustment Ramp Down

Ramp Down, when selected, begins a delay decrease using the Rate value from the present delay value to 0.

4.6.13 Rate

The Rate indicator displays the rate at which the total delay can be changed. If the rate is 0 when the delay is changed, it will be executed immediately. If the rate is 100 and the delay is changed, that change will slowly take effect: for every 100 audio samples, 1 extra sample is inserted or extracted. The higher the rate, the longer it will take to achieve the final value.

The Rate field, when selected, brings up the Numeric Keyboard screen (*Figure 4-6*). To change the Rate value, enter the desired rate using the number keys. Press *Enter* to establish the new Rate and return to the Analog Audio Diversity screen.

4.6.14 Audio Monitor

The Audio Monitor indicates/controls the audio stream present at the Exciter Monitor output. The options are:

- Delayed Analog Audio is (same as the analog Audio out) the diversity delayed input analog audio.
- Analog Audio is the input analog audio.
- Digital Audio is the input digital audio.
- AM Mono Audio is the monophonic input analog audio. Any internal band-limit filtering, 5 or 8 kHz, has not been applied.
- Receiver Monitor Audio is the digital audio encoded then decoded.
- Tone Monitor places a 1-kHz full-scale sine wave on the monitor output.

4.6.15 Invert Digital Audio Phase

When this box is checked, the phase of the digital audio stream is inverted.

4.6.16 Audio Diversity Delay Status

The Audio Diversity Delay Status indicator displays the percentage of current diversity delay.

4.6.17 Audio Card 0 Input Level

The Audio Card 0 Input Level indicator displays activity on the audio card 0 input path.

4.6.18 Audio Card 0 Output Level

The Audio Card 0 Output Level indicator displays activity on the audio card 0 output path.

4.6.19 Audio Card 1 Input Level

The Audio Card 1 Input Level indicator displays activity on the audio card 1 input path.

4.6.20 Audio Card 1 Output Level

The Audio Card 1 Output Level indicator displays activity on the audio card 1 output path.

4.6.21 Audio Bypass

See Paragraph 4.1.12.

4.6.22 Audio Blend Control

The Exciter can transmit a control bit to the receiver that indicates not to blend between analog and digital. This could be used in cases of different audio content or non-time alignment. When this bit is set it is up to the receiver to determine which audio stream is used. *Figure 4-53* shows the selection.

Figure 4-53 Audio Blend Control Screen

If the *Enable Audio Blending* Control is selected, blending will occur regardless of the mode or the state of the diversity delay. If the *Enable Automatic Blending only when audio alignment is completed* Control is selected, blending will only be enabled if the diversity delay is completely ramped up. Blending will automatically be disabled when diversity delay is either being applied (Section 4.6.11) or removed (Section 4.6.12) and if the diversity delay is completely ramped down. *Disable Audio Blending* allows the blending to be disabled for certain service modes. *Disable Audio Blending, But Allow Independent Selection* is used when different program material is being transmitted on the digital or analog channels.

4.6.23 Audio Level Control

The exciter can transmit control information to the receiver to indicate adjustments between the analog and digital audio. When selected the screen in *Figure 4-54* is displayed. To change the recommended level adjustment, enter the desired value in the New Audio Control Value text box using the numeric keyboard. Press "Enter" to establish the new value and return to the Audio screen.

Figure 4-55 shows the GUI main screen Signal Tab. Descriptions of control buttons displayed on the Signal Tab of this screen are provided in the following subparagraphs.

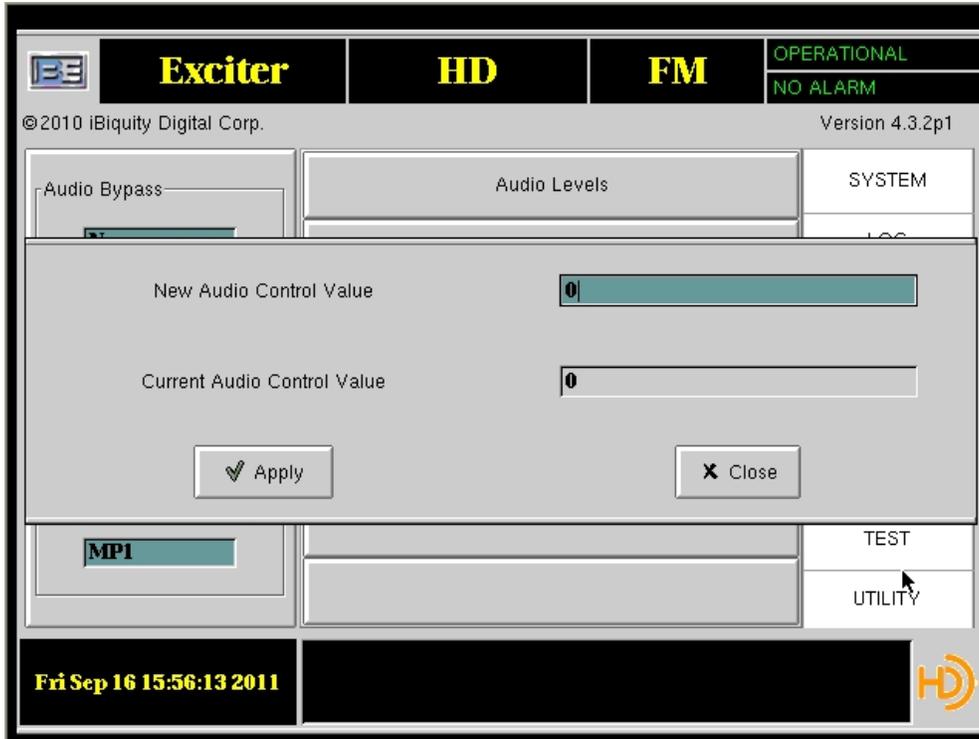

Figure 4-54 Audio Level Control

4.7 Signal Tab Control Buttons

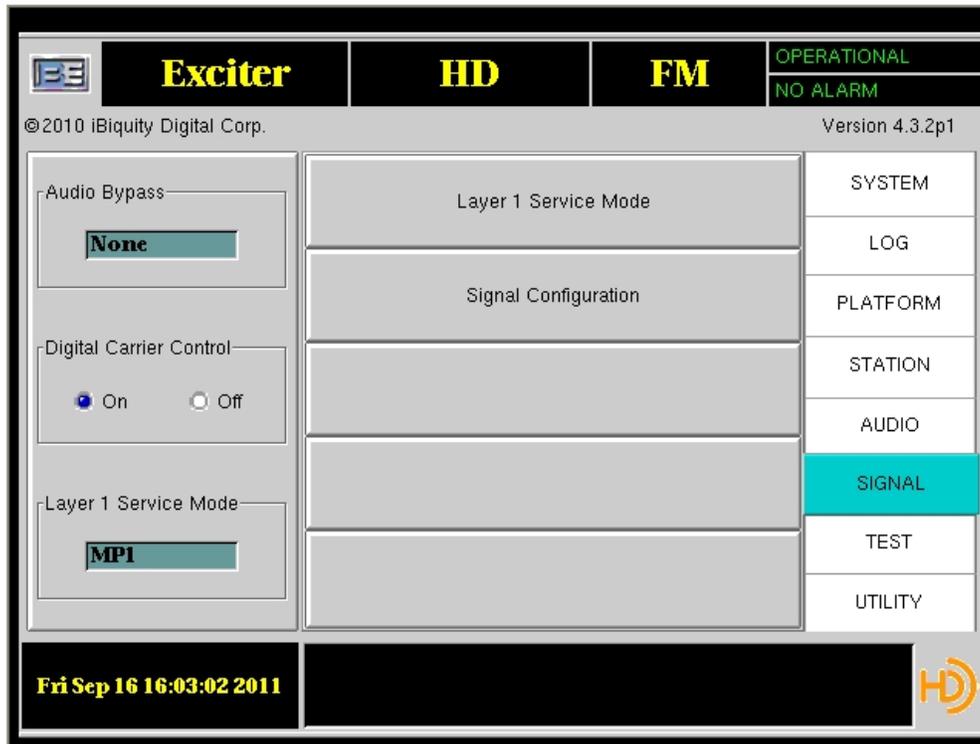

Figure 4-55 Reference Exciter GUI Interface Signal Tab

4.7.1 Frequency

See paragraph 4.1.8.

4.7.2 Layer 1 Service Mode

See paragraph 4.1.18.

4.7.3 Signal Configuration

Figure 4-56 shows the signal configuration screen. Descriptions of control button and value selections displayed on this screen are provided in the following subparagraphs.

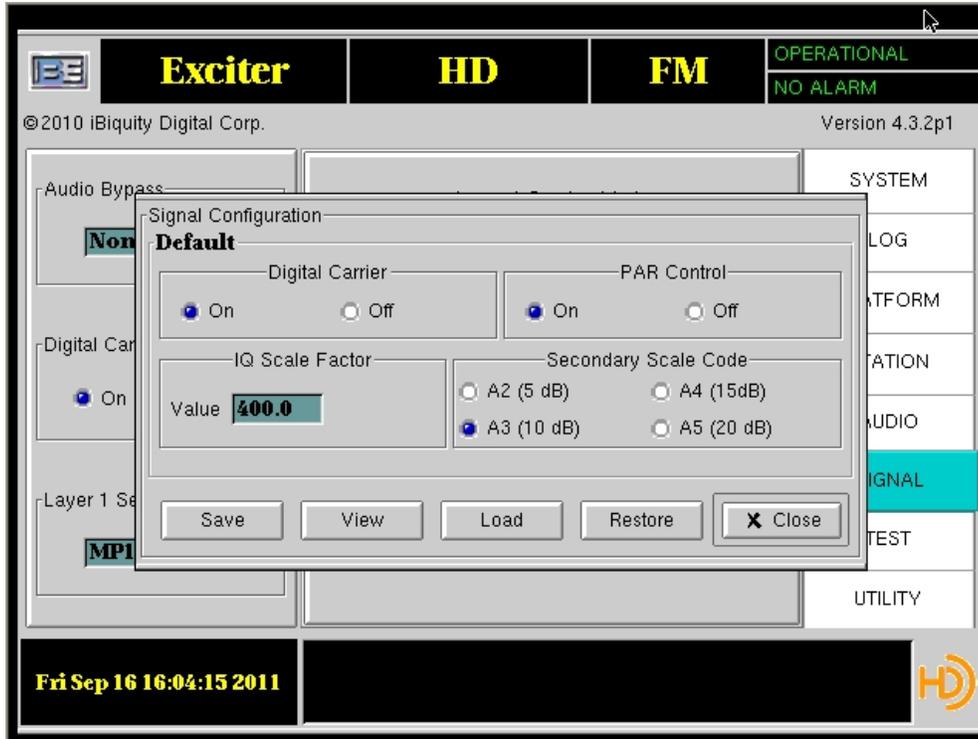

Figure 4-56 Signal Configuration Window

4.7.4 Digital Carrier Control

See paragraph 4.1.17.

4.7.5 PAR Control

Peak-to-Average Ratio (PAR) Control enables/disables the peak-to-average ratio limiting of the digital subcarriers. Care should be exercised when setting PAR to Off. This, in combination with I/Q Scale Factor and waveform type, can cause D/A overflows resulting in spectral distortion.

When a PAR On or Off selection is made, the PAR Dialog Box (*Figure 4-57*) is displayed, warning of a potential problem. From the Dialog Box, select OK to display the Numeric Keyboard screen (*Figure 4-6*). With PAR On, use a scale factor of 400. With PAR Off, the maximum scale factor is 300. To change the I/Q Scale Factor, enter the desired I/Q Scale Factor using the number keys. Press *Enter* to establish the new I/Q Scale Factor and return to the main menu.

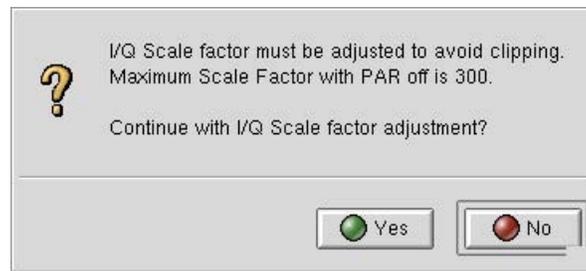

Figure 4-57 PAR Dialog Screen

4.7.6 I/Q Scale Factor

This factor is used to set the level of the composite signal prior to the last D/A. Care should be taken when adjusting this value. This, in combination with PAR Off, can cause D/A overflows resulting in spectral distortion.

When Scale Factor is selected, the Numeric Keyboard screen is displayed, similar to *Figure 4-6*. With PAR On, a scale factor of 400 is acceptable for all waveform types. With PAR Off, the maximum scale factor is 300. To change the I/Q Scale Factor, enter the desired I/Q Scale Factor using the number keys. Press *Enter* to execute the new I/Q Scale Factor and return to the main menu.

4.7.7 Secondary Scale Code

The Secondary Scale Code (level of secondary subcarriers below the primary subcarriers) is set by selecting the desired Secondary Scale Code, A2 through A5.

4.7.8 Presets

The 5 buttons at the bottom of the Signal Configuration menu allow for the management of the available preset configurations. Once the desired signal configurations are set, press *Save* and a dialog box similar to *Figure 4-58* is displayed. Select the desired preset, enter the desired name and hit *OK*.

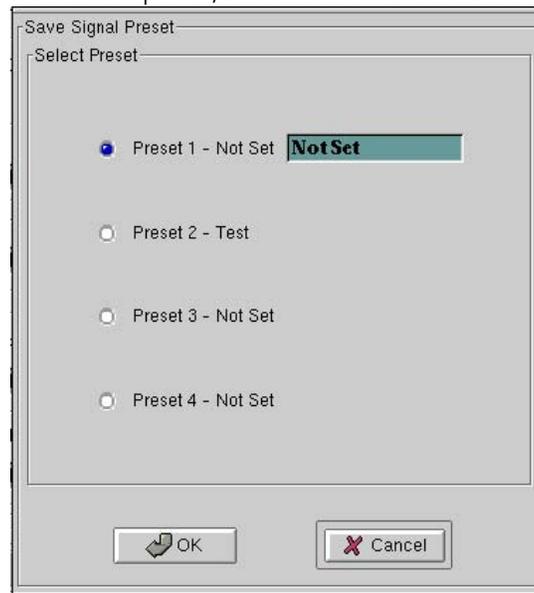

Figure 4-58 Save Signal Preset Dialog box

To view the setting for all presets select *View* and a display box similar to *Figure 4-59* will be displayed.

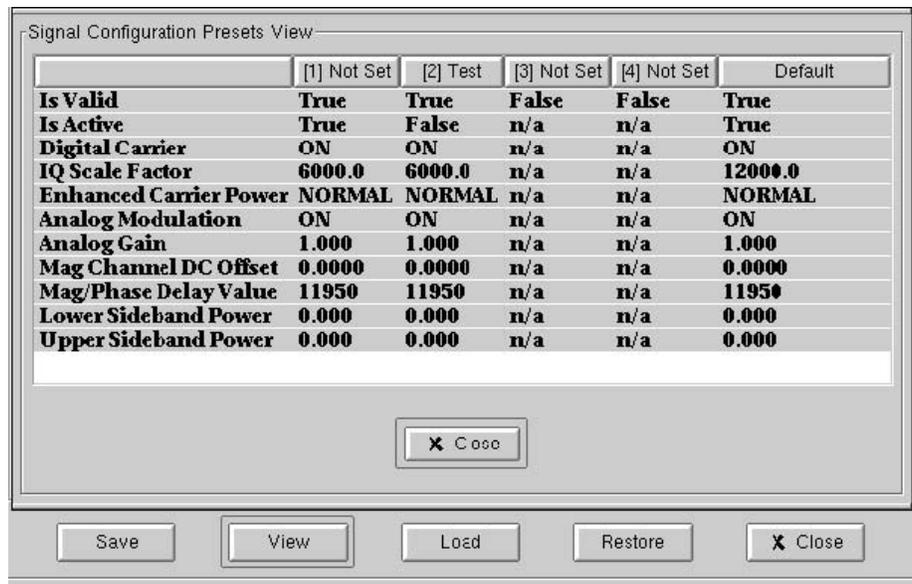

Figure 4-59 Signal Preset View Window

To load a preset simply press *Load* and a dialog box similar to *Figure 4-58* will be displayed. Select the desired preset and hit OK to return to the Signal Configuration menu. To restore the signal configurations to the factory default parameters select *Restore*. Finally to return to the main menu press *Close*.

4.8 Test Tab Control Buttons

Figure 4-60 shows the GUI main screen Test Tab. Descriptions of control buttons displayed on the Test Tab of this screen are provided in the following subparagraphs.

NOTE: All functions under the Test Tab REQUIRE a password to be accessed.

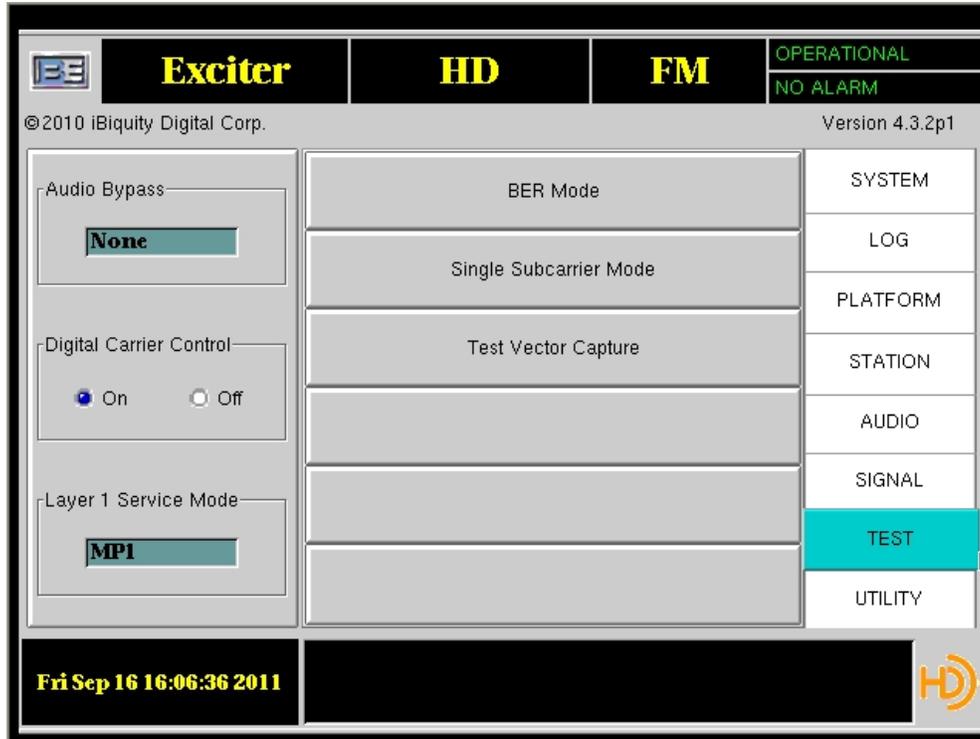

Figure 4-60 Reference Exciter GUI Interface Test Tab

4.8.1 Bit Error Rate Mode

The Bit Error Rate (BER) mode control selects either normal audio mode or Layer 1 BER mode (no digital audio) (Figure 4-61).

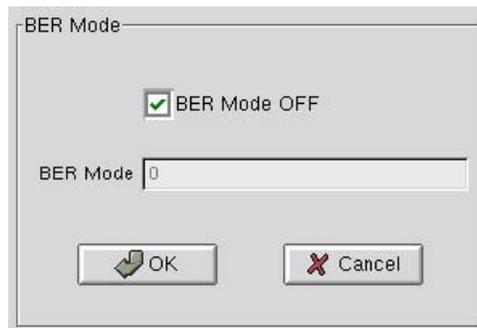

Figure 4-61 Bit Error Rate Mode Screen

BER Mode 1 sets the exciter to transmit a bit pattern that can be checked at the receiver Modem output. BER Mode 2 sets the exciter to transmit all zeros that can be checked at the receiver Viterbi decoder output. BER Mode 3 sets the exciter to transmit a PN (Pseudo Noise) sequence that can be checked at the receiver Viterbi decoder output.

In BER Mode, the FM Layer 1 service mode can be selected. To exit BER Mode, return the Layer 1 service mode to MP1 and select BER Mode Off.

4.8.2 Single Subcarrier Mode

The Single Subcarrier Mode screen, *Figure 4-62*, is displayed when selected from the main menu,. This screen provides digital carrier selection for test purposes.

The subcarrier number refers to the one subcarrier that will be transmitted. The value -546 corresponds to the lowest frequency subcarrier and the value 546 to the highest frequency subcarrier.

When Single Subcarrier Mode is selected, the numeric keyboard (*Figure 4-6*) is displayed. To change the Subcarrier Number, enter the desired number using the number keys. Press *Enter* to establish the new Subcarrier Number and return to the main menu.

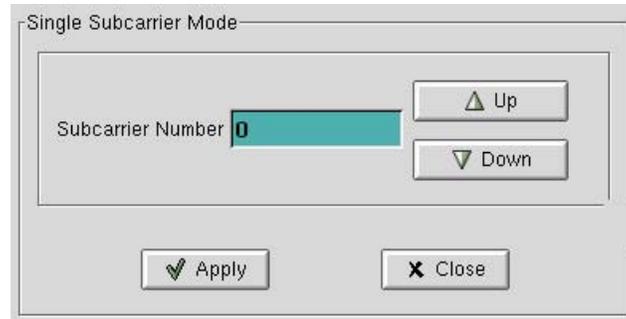

Figure 4-62 Single Subcarrier Selection screen

4.8.3 Test Vector Capture

The Test Vector Capture screen, *Figure 4-63*, is displayed when selected from the GUI Test Menu. This screen provides the ability to capture IF modulated IQ samples over a number of L1 Frame times. This functionality requires specialized knowledge of other system configuration elements which must be correctly set and is use for iBiquity test purposes. Without the correct configuration no data can be captured and this screen has no effect.

Figure 4-64 shows the GUI main screen Test Tab. Descriptions of control buttons displayed on the Test Tab of this screen are provided in the following subparagraphs.

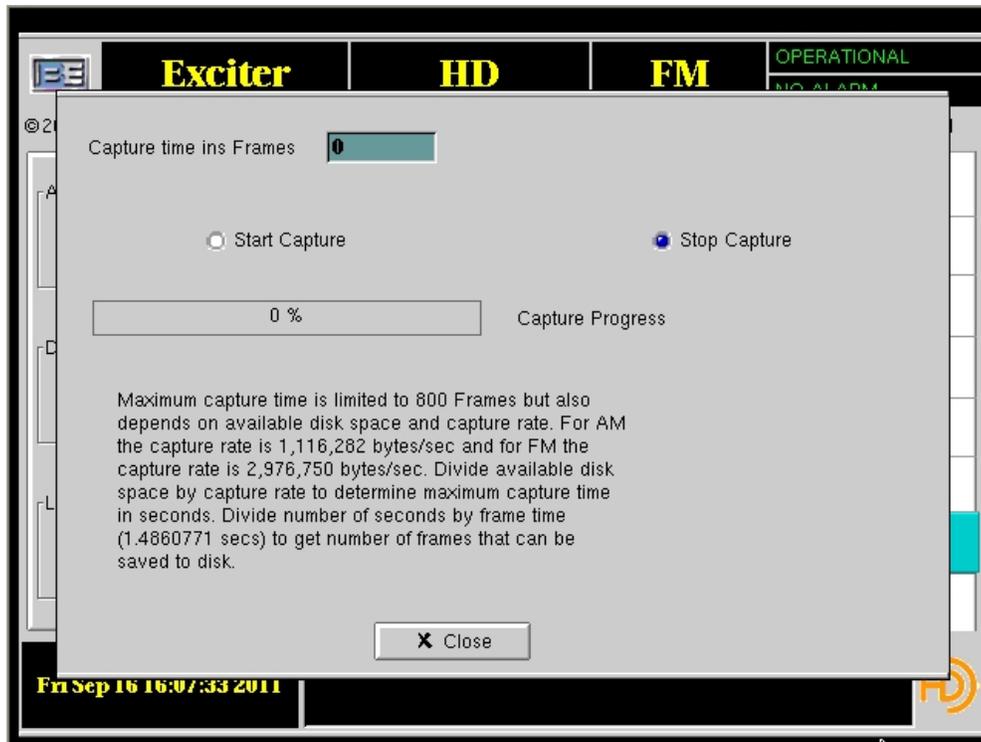

Figure 4-63 Test Vector Capture Screen

4.9 Utility Tab Control Buttons

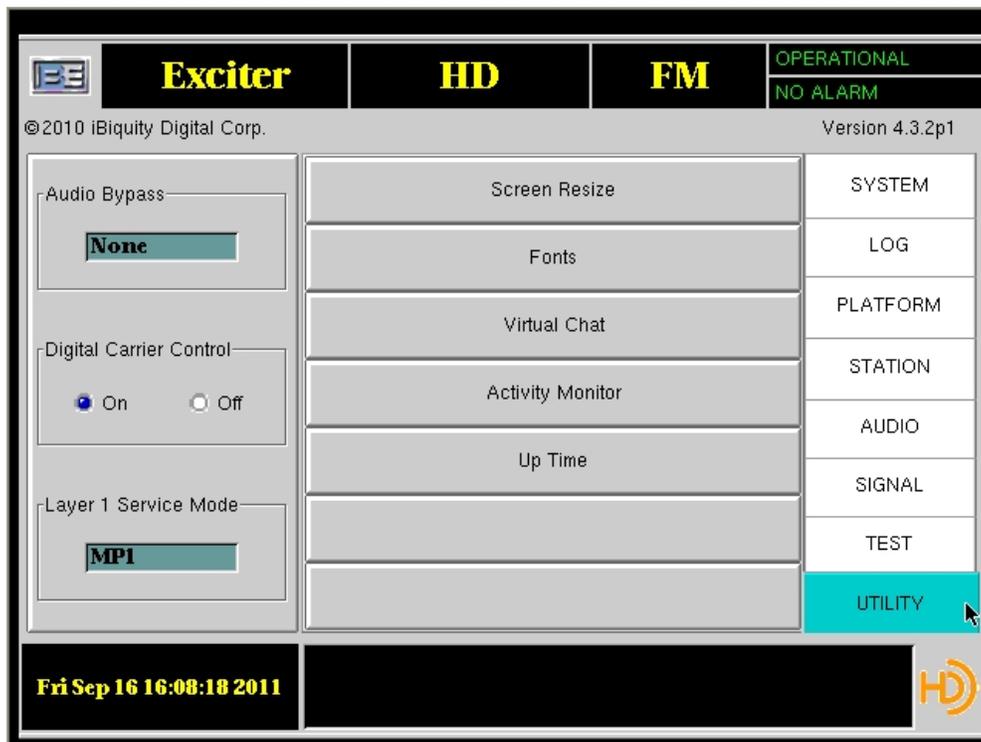

Figure 4-64 Reference Exciter Gui Utility Tab Screen

4.9.1 Screen Resize

The Screen Resize window allows the user to change the dimensions of the display, *Figure 4-65*.

4.9.2 Width Value

This displays the present value of the screen width. This can be raised or lowered using the + or – buttons.

4.9.3 Height Value

This displays the present value of the screen height. This can be raised or lowered using the + or – buttons.

4.9.4 Test

When selected, Test will display a test screen, *Figure 4-66*. Verify that the entire border is visible and select OK when complete.

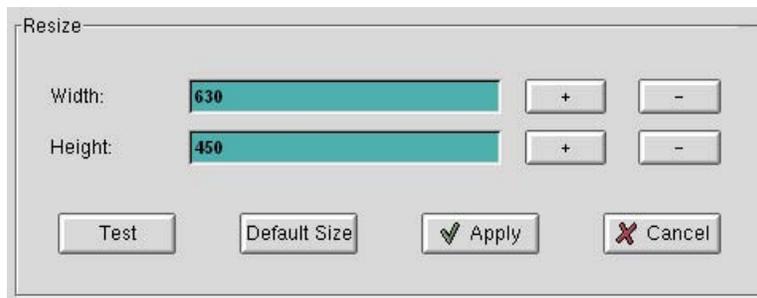

Figure 4-65 Screen Resize Screen

Figure 4-66 Screen Size Test Screen

4.9.5 Default Size

When selected, both the height and the width values will be reset to default settings.

4.9.6 Apply

When selected, the user will be prompted to reboot the system to make use of the new screen settings, *Figure 4-67*. Selecting Yes will proceed with the reboot and NO will cancel the action and return to the Exciter Main screen.

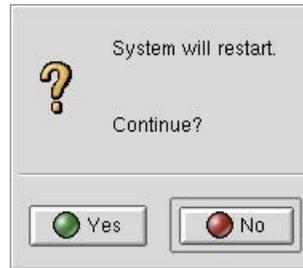

Figure 4-67 Apply Reboot Screen

4.9.7 Cancel

When selected, the user will be returned to the Exciter Main screen.

4.9.8 Fonts

This button, if selected, will display a System Fonts screen, *Figure 4-68*.

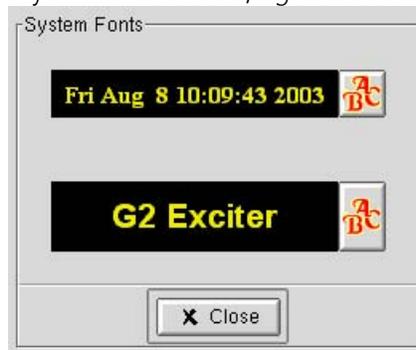

Figure 4-68 System Fonts Screen

The upper section if selected allows the user to select the font used on all small data presentation areas, *Figure 4-69*.

The lower section if selected allows the user to select the font used on all large data presentation areas, *Figure 4-69*.

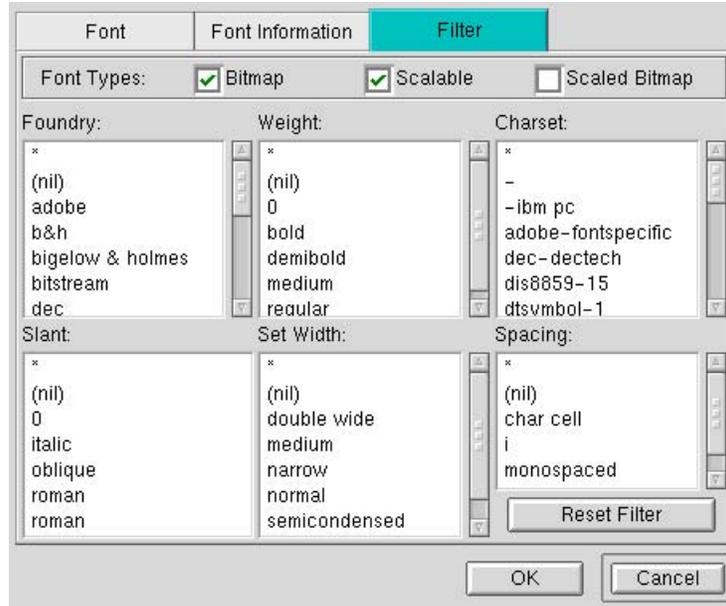

Figure 4-69 PickaFont Screen

4.9.9 Virtual Chat

The Virtual Chat Screen, *Figure 4-70*, allows direct communication between 2 users logged in to the same exciter. If a user is at the exciter and a second user has logged in remotely, see paragraph 6.6, using Virtual Chat they can communicate directly. By entering the information to be sent in the bottom window and pressing Send the message will be relayed to the other user. All communications will be displayed in the upper window.

Figure 4-70 Virtual Chat Screen

4.9.10 Up Time

When selected, the screen shown in *Figure 4-71* displays information about the length of time the exciter has been operational. Two columns are displayed: Calendar Time and Elapsed Time. Calendar Time represents the date and time the last event occurred. The Elapsed Time displays the total time in years, days, minutes, and seconds from the last event.

The events displayed are:

1. OS Start – The last time the OS was restarted.
2. System Start – The last time the application was started.
3. Last System Shut-down – The last time the system was shutdown.
4. Last System Error – The last time a warning or system error occurred.

Up Time

	Calendar Time	Elapsed Time
OS Start	Sep 16, 2011 13:42:11	0000 y, 000 d, 02:27:39
System Start	Sep 16, 2011 13:43:28	0000 y, 000 d, 02:26:22
Last System Shutdown	none	none
Last System Error	none	none
Last System Warning	Sep 16, 2011 13:44:17	0000 y, 000 d, 02:25:33

X Close

Figure 4-71 Up Time Information Screen

5 WAVEFORM GENERATION PLATFORM

This platform type is used when “Canned” data is to be sent through the exciter. It is a different platform type because it can use significantly less hardware. The only hardware needed is a DUC and a RUC. All other hardware, such as audio cards and station interface cards, are not used. However, if the hardware is present it is simply not used.

When the system is started in the platform type *WaveGen*, the screen shown in *Figure 5-1* is displayed. All the tabs and buttons, except those displayed in the Waveform Generator group box, work the same as in the Exciter platform type. Please refer to the appropriate section for a description of the usage.

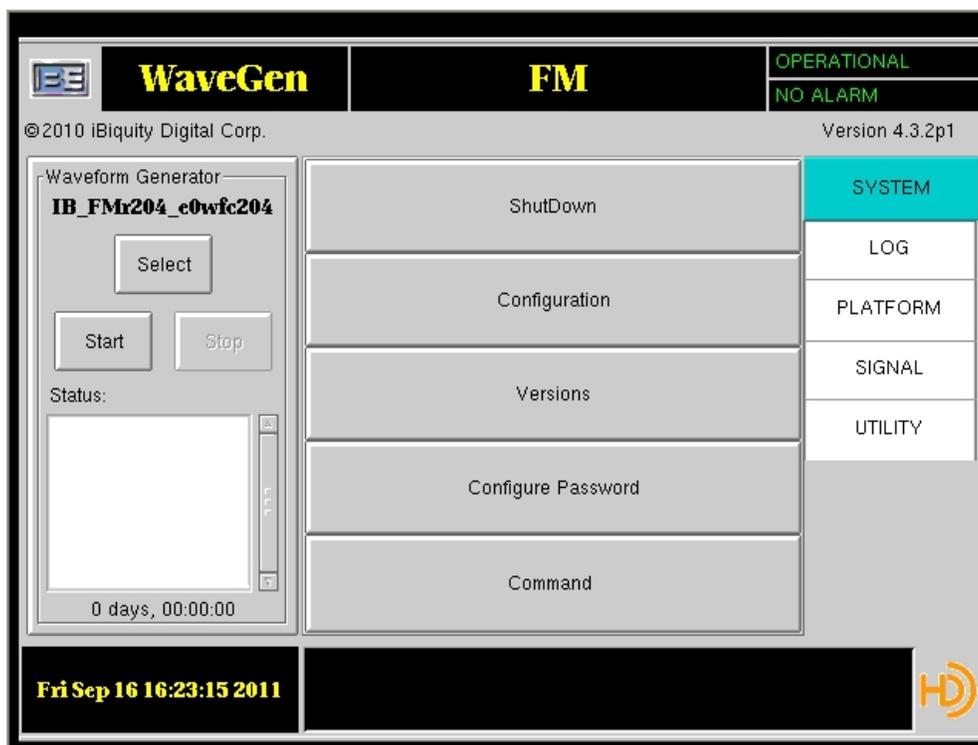

Figure 5-1 Waveform Generation Main Screen

To begin sending canned waveform data, first press the Select button and the screen shown in *Figure 5-2* is displayed. Use this screen to enter the name of the file containing the waveform data or select browse to select an available file, *Figure 5-3*. Select OK when the desired file is found. Select Close to close the Select window.

Figure 5-2 Waveform Generation File Selection Window

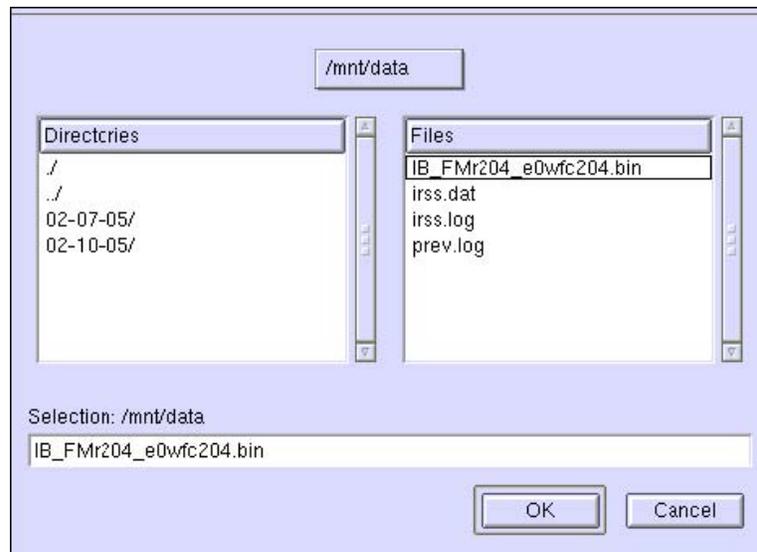

Figure 5-3 Waveform Generation File Browse Window

To start the sending of the waveform data, simply press Start. At this point the information in the Status field will begin to be updated, *Figure 5-4*. The status displays which symbol number, in hex, has been transmitted.

In addition, the amount of time the waveform file has been playing is also displayed. When the end of file is reached, the output is automatically restarted from the beginning of the file. Select *Stop* to stop the transmission of waveform data.

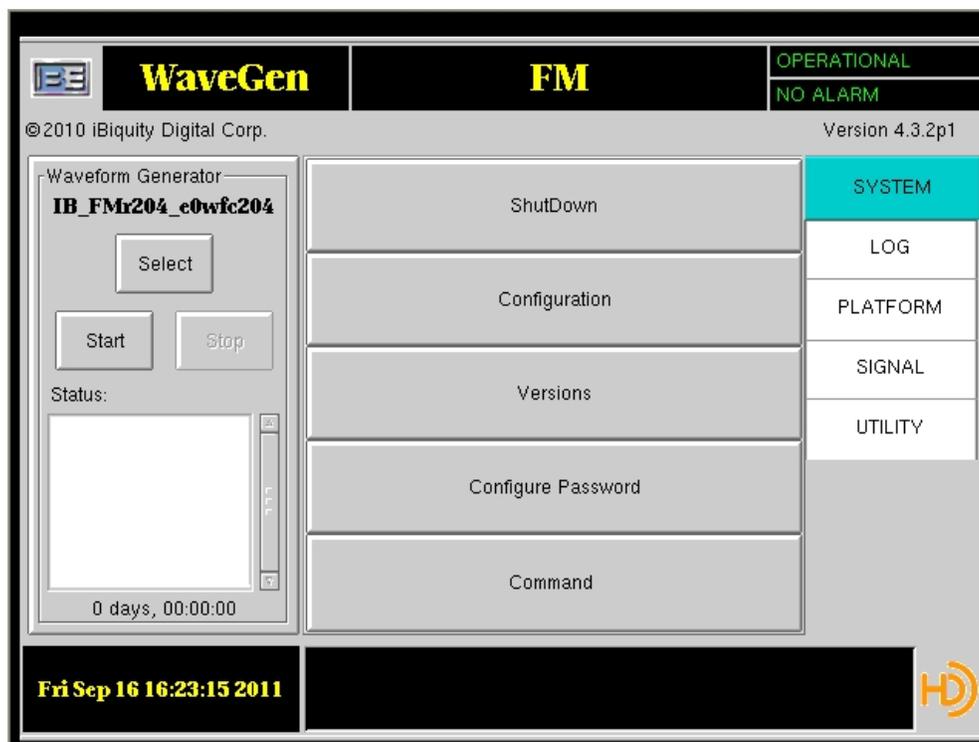

Figure 5-4 Waveform Generation Screen with Status Information

5.1 External Ethernet Hard Drive Support

The exciter supports the ability to stream test vectors from an external Snap Server. A Snap Server is a Snap Appliance external Ethernet based Server/Hard Drive solution. It must be connected via static IP (and Ethernet cross-over cable) to the exciter. A picture of a Snap Appliance Snap Server is shown in *Figure 5-5*.

Figure 5-5 Snap Appliance Snap Server 1100

When the Snap Server device is used to “stream” (real-time) waveforms (Waveform Generator Test screen) to an iBiquity IBOC Exciter, the following restrictions should be enforced:

- 1) Local Exciter 1-on-1 configuration should be used.
- 2) Up to 6 day runs have been tested and supported. If the plan is to run for more that 6 days, the recommended procedure is to copy the test vector file to the Exciter local hard drive (/mnt/data).

3) No IRSS application recovery tests have been performed on removing power or Ethernet cabling to the Snap Server Device DURING the “streaming” process. Use at your own risk on such sequences. When iBiquity IBOC Exciters are configured to be off the network (setmode away), a mount point is available for a locally connected Snap Server using a static IP (10.10.10.99) and local mount point (/mnt/vector_server). The locally connected Snap Server will be automatically mounted at boot time (if available) starting with Linux OS noted in the “Platform” section. If the Snap Server becomes available after boot time, ANY of the following Linux commands (when executed as root) will mount it:

```
reboot
mount -a
mount /mnt/vector_server
mount_test_vectors -m
mtv -m
```

Note: This configuration uses a “hard” mount to increase the priority and reliability of data transfers from the Snap Server (for real-time streaming). Caution should be used when removing power or the Ethernet cable without un-mounting the Snap drive. Processes on the Linux side may become blocked (locked up) otherwise.

6 Operating Procedures

This section contains HD Radio™ FM Exciter operating procedures.

6.1 Startup

Startup can be executed as embedded or non-embedded. The non-embedded startup requires manual entering of system configuration information from the keyboard, as described in paragraph 6.1.1. To have the exciter run the latest software upon power up with no user intervention, use embedded startup as described in paragraph 6.1.2. Perform the appropriate startup procedure to initialize the exciter.

NOTE . All Set commands must be executed as Root user to have effect.

6.1.1 Startup NonEmbedded

Perform the following procedures to initialize the exciter and EASU in **non-embedded** mode:

Set primary power on the exciter and EASU to On.

If the system is in the embedded mode, open an xterm window and type the following:

For general non-embedded operation	setdev	Press Return
To Set the IP address to 10.10.10.10	setaway	Press Return
To set local network settings for MD type	setmode MD	Press Return
Or to set local network settings for NJ type	setmode NJ	Press Return

The system must be rebooted for the change to take effect. Once the system boots up completely, login as root with the appropriate password.

Type: `start` Press Return

The following information is displayed:

```
/usr/dab
run ./init_loader.x ...
Executing Kernel: 2.4.20
Available baselines Kernel (built from)
0) /usr/dab/irss-x.x.x 2.4.20 (default)
Type: 0 and press Enter
```

The system initializes and the main menu is displayed. When the frequency (paragraph 4.1.8) is displayed, the system is ready for operation.

6.1.2 Startup Embedded

Perform the following procedures to initialize the exciter and EASU in **embedded** mode.

Set primary power on the exciter and EASU to On.

To set for embedded operation	setemb	Press Return
To Set the IP address to 10.10.10.10	setaway	Press Return
To set local settings for MD type	setmode MD	Press Return
Or to set local settings for NJ type	setmode NJ	Press Return

The system must be rebooted for the change to take effect. Press Return the default program is run without login on subsequent start-up.

6.2 Audio Diversity Blend Delay Adjustment

On a calibrated receiver, set the Audio Mode to Split Analog/Digital. On the exciter:

1. select Analog Audio Diversity, *Figure 4-52*.
2. set Delay to 400000
3. set Increment to 1024
4. set Rate to 0. Monitor the audio from the receiver while using the up/down arrow keys until proper alignment of the digital and analog audio streams is achieved. Close all adjustment windows and the values will be saved for subsequent startup.

6.3 Log Levels

To set the hard-drive logging level, press Log Levels. The screen in *Figure 4-33* is displayed. To set the logging level for an individual process, set the Log Level to a value 0 through 7 (0=Off, 7=Max). To set the description associated with the screen logging (not to a file) of each process, increase the number under the Verbose Level column (0=Off, 7=Max) to the appropriate level. This sets the Log Level stored in file /mnt/data/irss.log. This file is archived to a date associated file ex: /mnt/data/03-0203/irss02:33:00.log.

The size and number of these files can be set by editing /usr/dab/irss-x.x.x/cfg/com/logx.cfg

Excerpt from logx.cfg

```
logFilePath=".";
logFileName="irss";
logAsciiFileSize=%d : 10000000;
logBinFileSize=%d : 209715200;
logSentCycleFlag=%d : 0;
logArchiveDay=%d : 2;
logArchFileCount=%d : 5;
```

To increase the size of each file, change logAsciiFileSize.

To increase the number of days to hold data files, change logArchiveDay.

To increase the number of files stored each day, change logArchFileCount.

Exercise caution when setting these file sizes and log levels: excessive data can lead to a full disk.

6.4 Shutdown Procedure Nonembedded

Select Shutdown.

If power is to be removed, type *halt*. This will stop the OS. Wait until *OK* is displayed to turn power off.

If the OS is to be restarted, type *reboot*. The system reboots to the login prompt.

If the application is to be restarted, type: *start* to restart the program.

6.5 Shutdown Procedure Embedded

Select Shutdown.

If power is to be removed, select *Shutdown* and press *OK*. This will halt the OS. Wait until the display indicates *OK* to power down.

If the OS is to be restarted, select *OS Restart* and press *OK*. The system will reboot back to the default program.

If the application is to be exited and restarted, select *Restart* and press *OK* to exit and rerun the program.

6.6 Remote GUI Control

When the Exciter operating system is running, control can be remotely established using a standard web browser such as Internet Explorer. A network connection to the exciter must be established either by Ethernet or modem (see Paragraph 6.7).

Once a network connection is established, with the web browser on a standard PC, type the IP address or machine name in the Address field. The VNC Authentication screen is displayed, *Figure 6-1*.

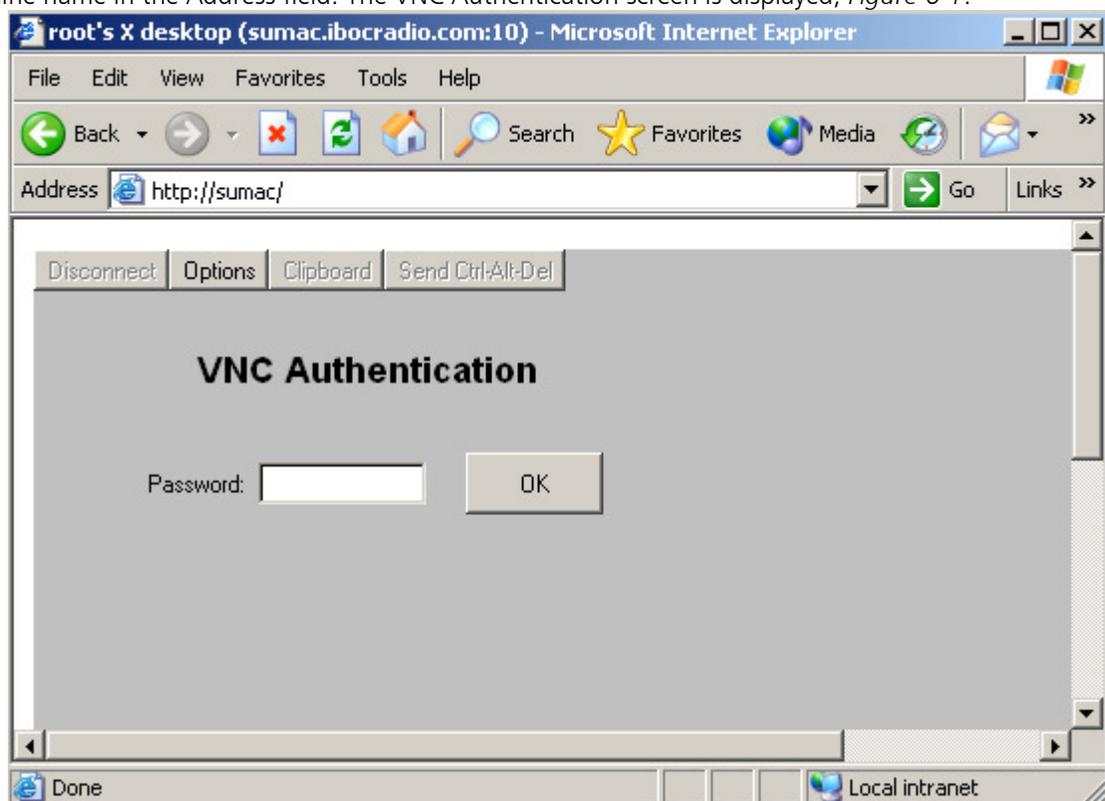

Figure 6-1 VNC Authentication Screen

Type *password* for the password and select *OK*. The Exciter Main Menu is displayed in the web-browser as shown in *Figure 6-2*. The Exciter can now be controlled from the remote location, just as if you were at the console, without limitation.

Note: Any number of connections to the same exciter is permitted (i.e. there is no lock-out for multiple users).

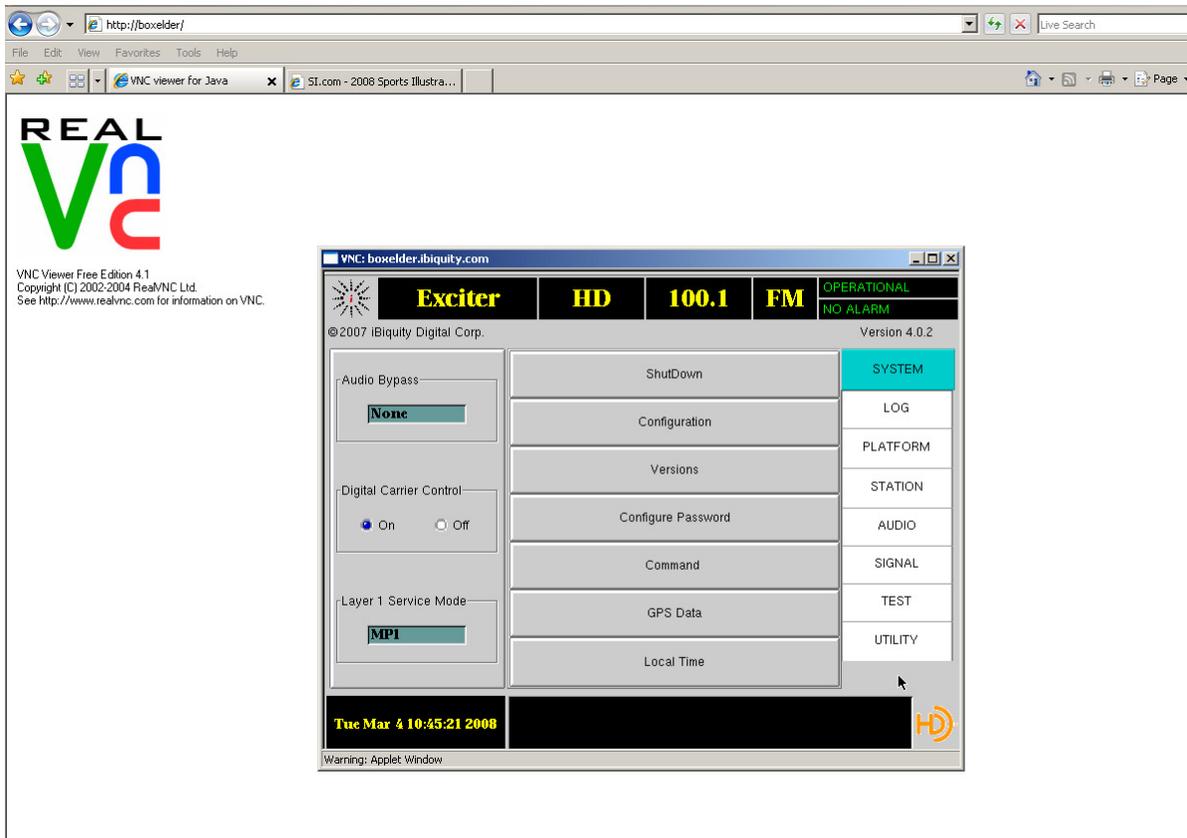

Figure 6-2 Remote Exciter Main Menu Access Screen

Access any X-windows applications and/or a console by using the System Command function, see paragraph 4.2.10.

6.7 Telco Dialup

The capabilities described in Paragraph 6.7 are available via modem connection. Perform the following procedures to access the Exciter OS via dialup connection.

Note: The MODEM will only answer when in the setemb mode.

On standard PC with Windows 95, 98, 2000, NT, or XP OS, set up a Dial-up Networking (DUN) account using the Windows OS Dial-up Networking Wizard.

Connect the Exciter Telco modem input jack to an analog phone line.

The exciter by default will answer on the first ring. To change the ring to be answered on to 5, edit file etc/mgetty+sendfax/mgetty.config adding the following, left justified, anywhere in the file:

rings 5

The exciter must now be rebooted for the change to take effect.

Connect the Windows PC modem to another analog phone line. From the Windows PC, use the newly created DUN account to dial into the exciter.

Once the connection is established, use a web browser as described in Paragraph 6.6, and type <http://10.0.0.1> in the address field. The VNC Authentication screen should now displayed *Figure 6-1*.

Note: Once the DUN connection is made, any TCP/IP-based client application can be run on the Windows PC to interact with the exciter (e.g. telnet, ftp, Exceed, ssh, etc.).

Note: The DUN connection assigns IP addresses to both the exciter and Windows PC. The IP address assigned to the Exciter is 10.0.0.1 and the IP address assigned to the Windows host is 10.0.0.2.

6.8 Console User Interface

All the capabilities described in Paragraph 3 can be invoked through the Console User Interface for the exciter, `cuitx.x`. For complete use and syntax go to the proper directory and view the help file:

```
cd /usr/dab/irss-x.x.x/bin/tx
```

```
./cuitx.x -h | more
```

Press the space bar to walk through the file.

Additionally any `cuitx` function can be set on a schedule utilizing the `cronx` feature. The following is an example of a script, `tgldab.sh`, that toggles the digital carriers on/off:

```
#read the dab state and write it to the variable flag
flag = `./cuitx.x -getL1Stat | grep "digital carrier control" | awk '{ print $5 }`
#toggle the dab state, if on turn dab off if dab off turn it on.
if [ "$flag" == "ON" ]
then
./cuitx.x -dab 0
Else
./cuitx.x -dab 1
fi
```

This script can be invoked on a schedule by executing the following command.

```
./cronx.x ./tgldab.sh 10
```

This will execute the script `./tgldab.sh` every 10 seconds. When you no longer want the script to run type:

q to quit.

Note: *You must type q to quit do not press `ctl-c` this will cause errors on the exciter display.*

7 Software Upgrade

7.1 Software Upgrade Overview

CAUTION: This process removes all user software/data from the hard drive.

Obtain the proper version and place the CD into the rear CDROM and reboot the FSi 10. The iBiquity Digital Reference Platform Install screen is displayed.

The upgrade advances without interdiction.

After approximately 9 minutes, the CD should eject and the FSi will reboot.

NOTE: All network configuration (name, ip number...) is saved and need not be reset.

NOTE: A mouse and keyboard must be connected before boot-up to do any editing such as Ethernet IP Address setup, etc.

7.1.1 Software Upgrade Detail

The update software for the FSi 10 is contained on a single CD-ROM that is placed in the FSi 10 CD-ROM drive. The internal hard drive will be overwritten except for IP address if you have configured the exciter for Ethernet connectivity.

1. Make sure transmitter is off.
2. Turn **On** the FSi 10, if not already On. Allow FSi 10 to fully boot to the Main Screen. The Main Screen shot may be different from below depending on the Version currently installed.

The screenshot displays the main interface of the G2 Exciter software. At the top, the station call sign 'WXYZ' and frequency 'FM' are shown in large yellow letters on a black background. To the right, the status is 'OPERATIONAL' and 'NO ALARM' in green. Below this, the copyright '©2005 Ibiquity Digital Corp.' and 'Version 2.2.2' are visible.

The interface is divided into several sections:

- Left Panel:** Contains three control sections:
 - Audio Bypass:** A dropdown menu currently set to 'None'.
 - Digital Carrier Control:** Two radio buttons, 'On' (selected) and 'Off'.
 - Layer 1 Service Mode:** A dropdown menu currently set to 'MPI'.
- Center Panel:** A vertical list of menu items: ShutDown, Configuration, Versions, Configure Password, Command, GPS Data, and Local Time.
- Right Panel:** A vertical list of menu items: SYSTEM (highlighted in green), LOG, PLATFORM, STATION, AUDIO, SIGNAL, TEST, and UTILITY.
- Bottom Panel:** A black bar with yellow and green text showing the date and time: 'Thu Feb 17 16:19:29 2005' and a warning: ':59:401: tsmx.x: tsmcm.c: 1366: [Warning: GPS is not time locked'.

Figure 7-1 Main Screen of Software to be updated

1. The software defaults to a delay that should be close to optimum. You will need to readjust the Analog Audio Diversity Delay on your actual system due to delays such as processing delay. Write the current delay down in case of needing to revert to the previous version.

Audio Diversity Delay _____

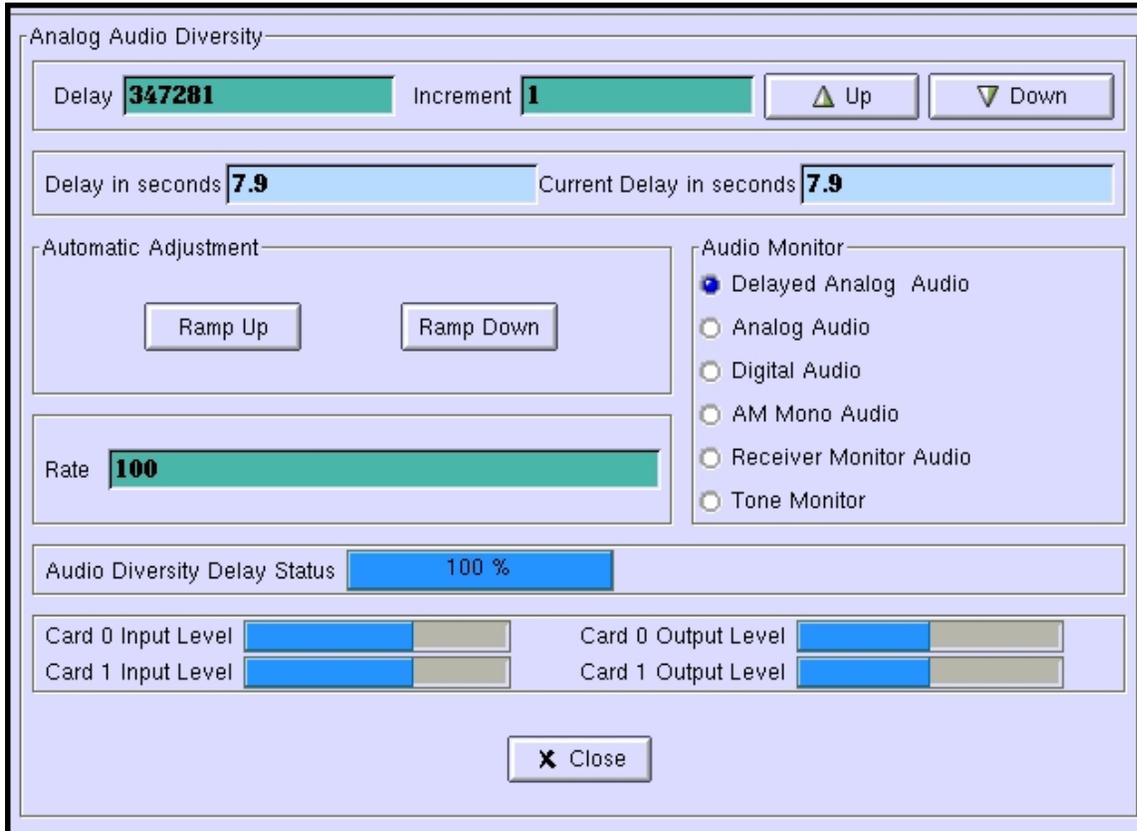

Figure 7-2 Analog Audio Diversity Screen

2. Please record any other parameters or settings that you may have adjusted from the default settings such as Station Call Sign. _____

3. Open CD ROM drive on back of FSi 10 (push button on CD tray) and place BE software CD in tray.
4. Ensure the CD is snapped onto spindle of CD ROM drive.
5. Press **OS Restart** on **Shutdown** menu and then **OK**.

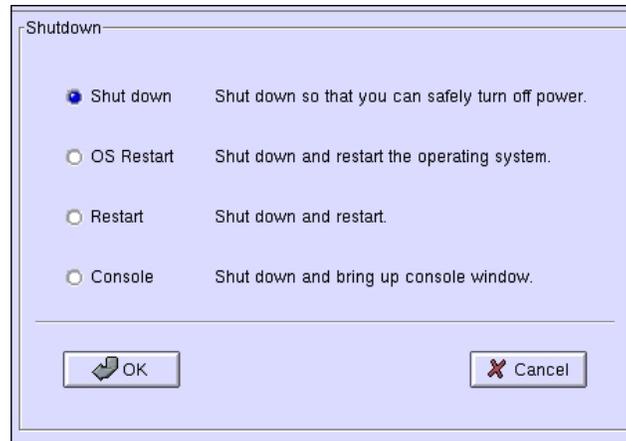

Figure 7-3 Shutdown Screen

6. The FSi 10 should automatically start reboot process.
7. Software will automatically load in about 15 minutes.
8. CD will automatically eject when finished.
9. Exciter will automatically reboot and start up the exciter program. This will take approximately 5 minutes.
10. In the FSi 10/FXi system the frequency is controlled by the FXi. No frequency is entered into the FSi 10.
11. Unit should be running with no errors (errors show in red) on the System Status Log screen. If errors show up, please try to reinstall again starting at step 5. If errors persist, please call BE Customer Service. Green warnings are OK.

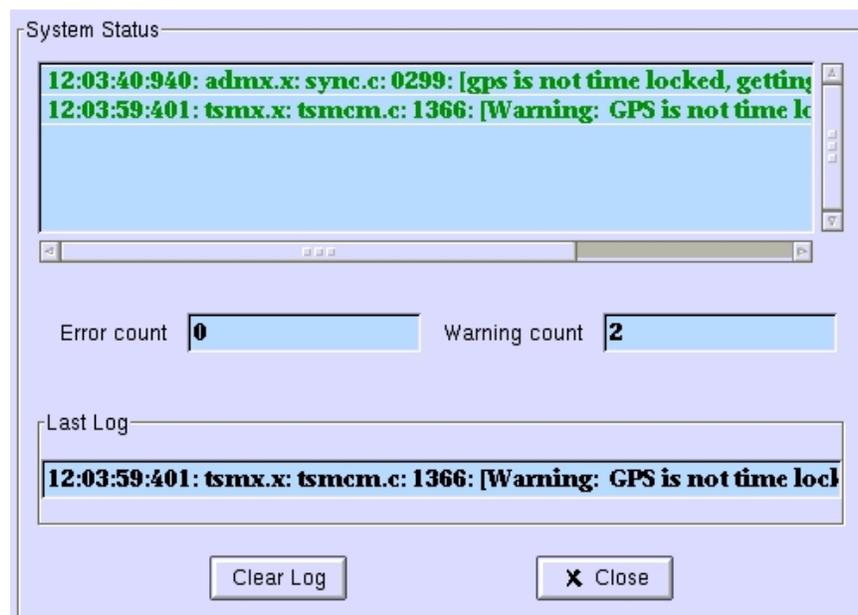

Figure 7-4 System Status Screen

1. Re-input values previously recorded.

If alarm display is flashing red, this is generally due to GPS not being locked. To eliminate the flashing alarm display press the “Station Interface” on the Station Tab.

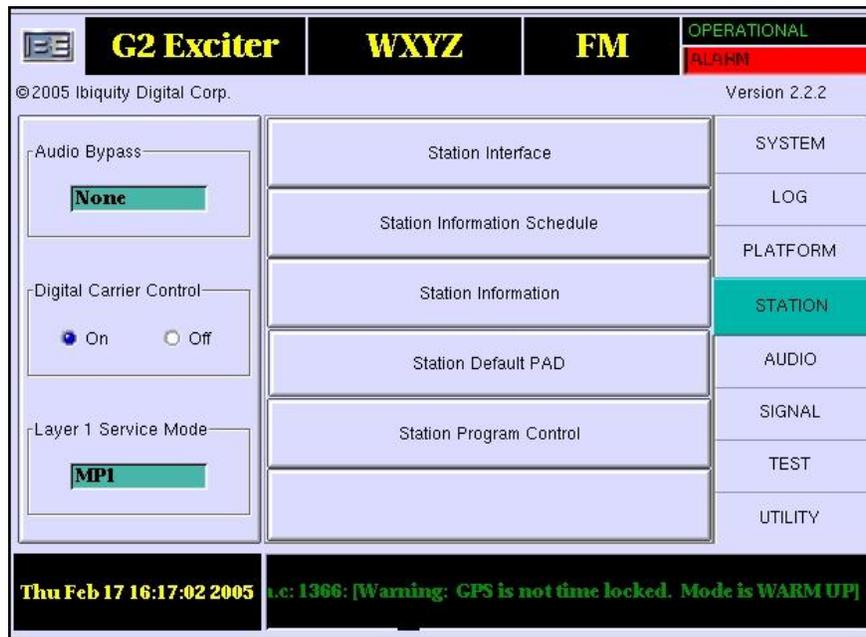

Figure 7-5 Main Screen Station Tab

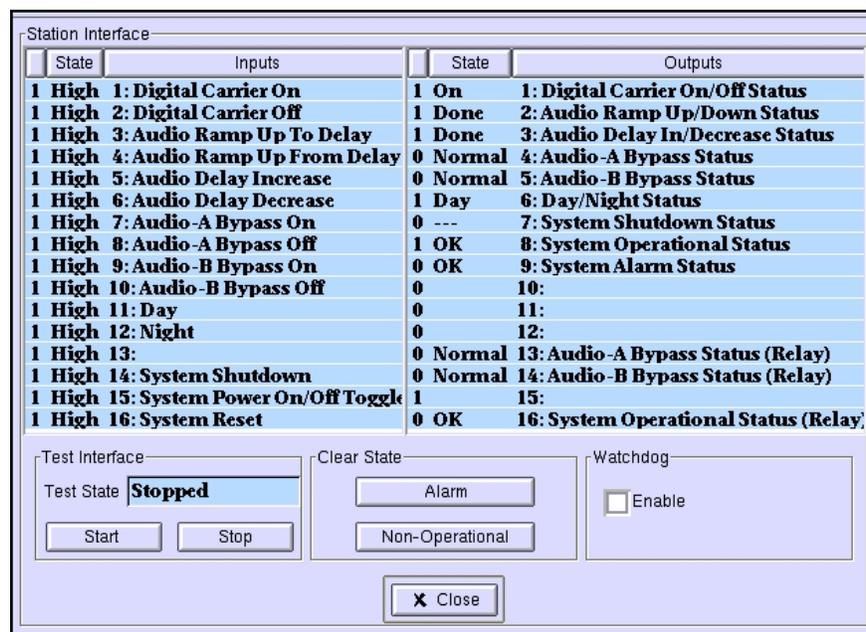

Figure 7-6 Station Interface

1. Press “Clear State - Alarm”. The flashing red Alarm will display “No Alarm”.

OPERATIONAL

NO ALARM

1. Transmitter is ready to be turned on.
2. Remove CD and close tray.

7.2 Touch Screen Configuration

The iBiquity Linux OS supports 3 touch screen configurations within the Mother Board 4 configuration (MB4 - Intel G45600-B 865G ATX):

- 1) OmniVision touch screen (DEFAULT)
- 2) 3M Dynapro touch screen with 3M touch driver for 3M part RES4-232-BRD controller (old controller)
- 3) 3M Dynapro touch screen with TouchWare driver for SC402S serial controller (new controller)

Notes:

iBiquity Linux OS 6.8 was the 1st OS that supports MB4 with only configuration #1 listed above.

iBiquity Linux OS 7.0 added support for configuration #2 listed above.

iBiquity Linux OS 7.2 added support for configuration #3 listed above.

Upon OS installation on a MB4 configuration, the touch screen configuration will have to be manually configured if the configuration is not #1 listed above to ensure the pointer on the touch screen is tracking properly. This consists of configuring the correct Linux OS kernel driver and associated 'X' Windows configuration file. A "touch-screen-test.sh" script is available to manually test the configurations above. Once the settings have been verified, no further configuration will be necessary since the configuration settings will be save to the local hard drive and persist thru future iBiquity Linux OS upgrades. Only a hard drive change, or change to the actual touch screen/controller configuration will require this process to be performed again.

To properly configure the touch screen configuration:

- 1) Log in using user name and password (root/password). This must be done in console mode, with no application running (which is the default configuration upon a new iBiquity Linux OS install).
- 2) Enter: >> touch-screen-test.sh
- 3) Follow the on screen directions. This script will loop thru the above 3 configurations, setting up the proper touch screen configuration, enter 'X' Windows, and ask the user to test the touch screen and see if the cursor follows manual touches. If so, the test ends, and the configuration has been saved. If the cursor does not follow the manual touches, the next touch screen configuration is entered, and the manual touch screen test continues (until a successful configuration is found).

If the configuration is known, the "touch-screen-test.sh" script can be used to directly configure the touch screen:

- 1) Log in using user name and password (root/password). This must be done in console mode, with no application running (which is the default configuration upon a new iBiquity Linux OS install).
- 2) Configure the touch screen directly:
 - a. For the default OmniVision touch screen:

- >> touch-screen-test.sh -default
- b. For the 3M Dynapro touch screen with 3M touch driver (old controller):
 - >> touch-screen-test.sh -3Mmmm
- c. For the 3M Dynapro touch screen with 3M TouchWare driver (new controller):
 - >> touch-screen-test.sh -3Mtwd

In addition, for the 3M Dynapro touch screen with 3M TouchWare driver (new controller), a calibration utility is available:

- 1) Log in using user name and password (root/password). This must be done in console mode, with no application running (which is the default configuration upon a new iBiquity Linux OS install).
- 2) Execute the calibration utility:
 - >> touch-screen-test.sh -3Mtwdcalibrate
 Follow the onscreen directions which consist of touching 2 target areas within the "X" Windows System to calibrate the pointer tracking device.

The following command provides addition help for this script: >> touch-screen-test.sh -h

7.3 Operational Software Upgrade From CDROM

Obtain the proper version and place the CD into the rear CDROM. Login to the exciter as root and type:

```
farmer -cdrom -f
```

When prompted, enter the mode (*tx*) and select the proper load. If the load does not match the OS (Kernel), a warning is displayed. The warning can be ignored and the load continued. Carefully select the appropriate OS on boot up (see paragraph 4.1.1).

To eject the CD type: *eject*

7.4 Operational Software Upgrade From iBiquity Network

Login to the exciter as root and type:

```
farmer
```

When prompted, enter the mode (*tx*) and select the proper load. If the farmer detects that the load does not match the OS(Kernel), a warning will appear. The warning can be ignored and the load continued.

Carefully select the appropriate OS on boot up (see paragraph 4.1.1).

7.5 File Transfer (Waveform files) from CDROM

Login to the exciter as root.

Insert CD into the drive then mount the CDROM

```
Type: mount /dev/cdrom /mnt/cdrom
```

To mount the data partition of the drive:

```
Type: mount /mnt/data skip if application is running.
```

Files can now be copied example: cp /mnt/cdrom/filename.ext /mnt/data/*

8 AES Bypass Configuration

8.1 Introduction

In the FSi 10/FXi 60/250 system used to generate the HD (IBOC) signal, audio is routed through both the FXi and FSi components before being applied to the Main FM transmitter. This is done to provide delay synchronization of the Analog and Digital Audio AES audio streams. The process of creating the HD signal takes approximately 9 secs, so the Analog FM signal must be delayed to create synchronization of the HD and Analog FM signals at the HD radio receiver. The failure of one of either the FSi or FXi could cause the Main FM transmitter to not have audio applied. With the addition of an external AES router and AES distribution Amp, the FSi 10/FXi 60/250 HD (IBOC) generation system can be bypassed to ensure audio continues to be delivered to the main Analog FM transmitter. The AES router in this system is controlled by software in the FXi to act upon any serious errors that occur in either the FXi or FSi. If either unit fails, the AES Router will be switched to the bypass mode so that the audio to the main FM transmitter will not be going through the FXi (IBOC card sample rate converter) or the FSi (audio delay function).

Please Note: When a fault occurs and the bypass becomes active there will be an abrupt loss of ~9 seconds of audio on the main Analog FM transmitter because the signal being applied is no longer being delayed by the FSi 10.

Most faults are latched in the FXi and the AES Bypass System will not switch back unless the Fault is manually cleared in the FXi. This can be done remotely by using the external Fault reset on J3-13 of the FXi or locally using the Diagnostics Fault Reset button. Similarly the FSi 10 can be remotely reset, which if it restarts correctly will cause the AES bypass A to be turned off and audio routed through the FSi/FXi HD system normally.

The Audio Bypass A switch will simulate what occurs when the FSi-10 indicates it has faulted, thus forcing an AES bypass to occur. Select Audio Bypass A On and then OK and the external AES router will bypass the HD system. Select Audio Bypass Off and then OK and the external AES router will then reroute the audio through the HD system.

8.2 AES Bypass Part Numbers

Three different versions of the AES Bypass system are available depending on the type of Audio Processing used in the system. These are:

979-0552 ...KIT, HD, AES BYPASS SYS., DUAL, DMS-III

979-0552-001 ... KIT, HD, AES BYPASS SYS., OMNIA, DMS-III

979-0552-002 ... KIT, HD, AES BYPASS SYS., ORBAN, DMS-III

The first is the more generic system using two separate processors, one for the HD AES and one for the Analog FM AES. The next two are systems for specific single input processors that provide two outputs that are processed optimally for HD and Analog FM. They differ in the way the External AES synchronization inputs are connected. If your system is configured differently than these please call BE Customer Service to discuss your options.

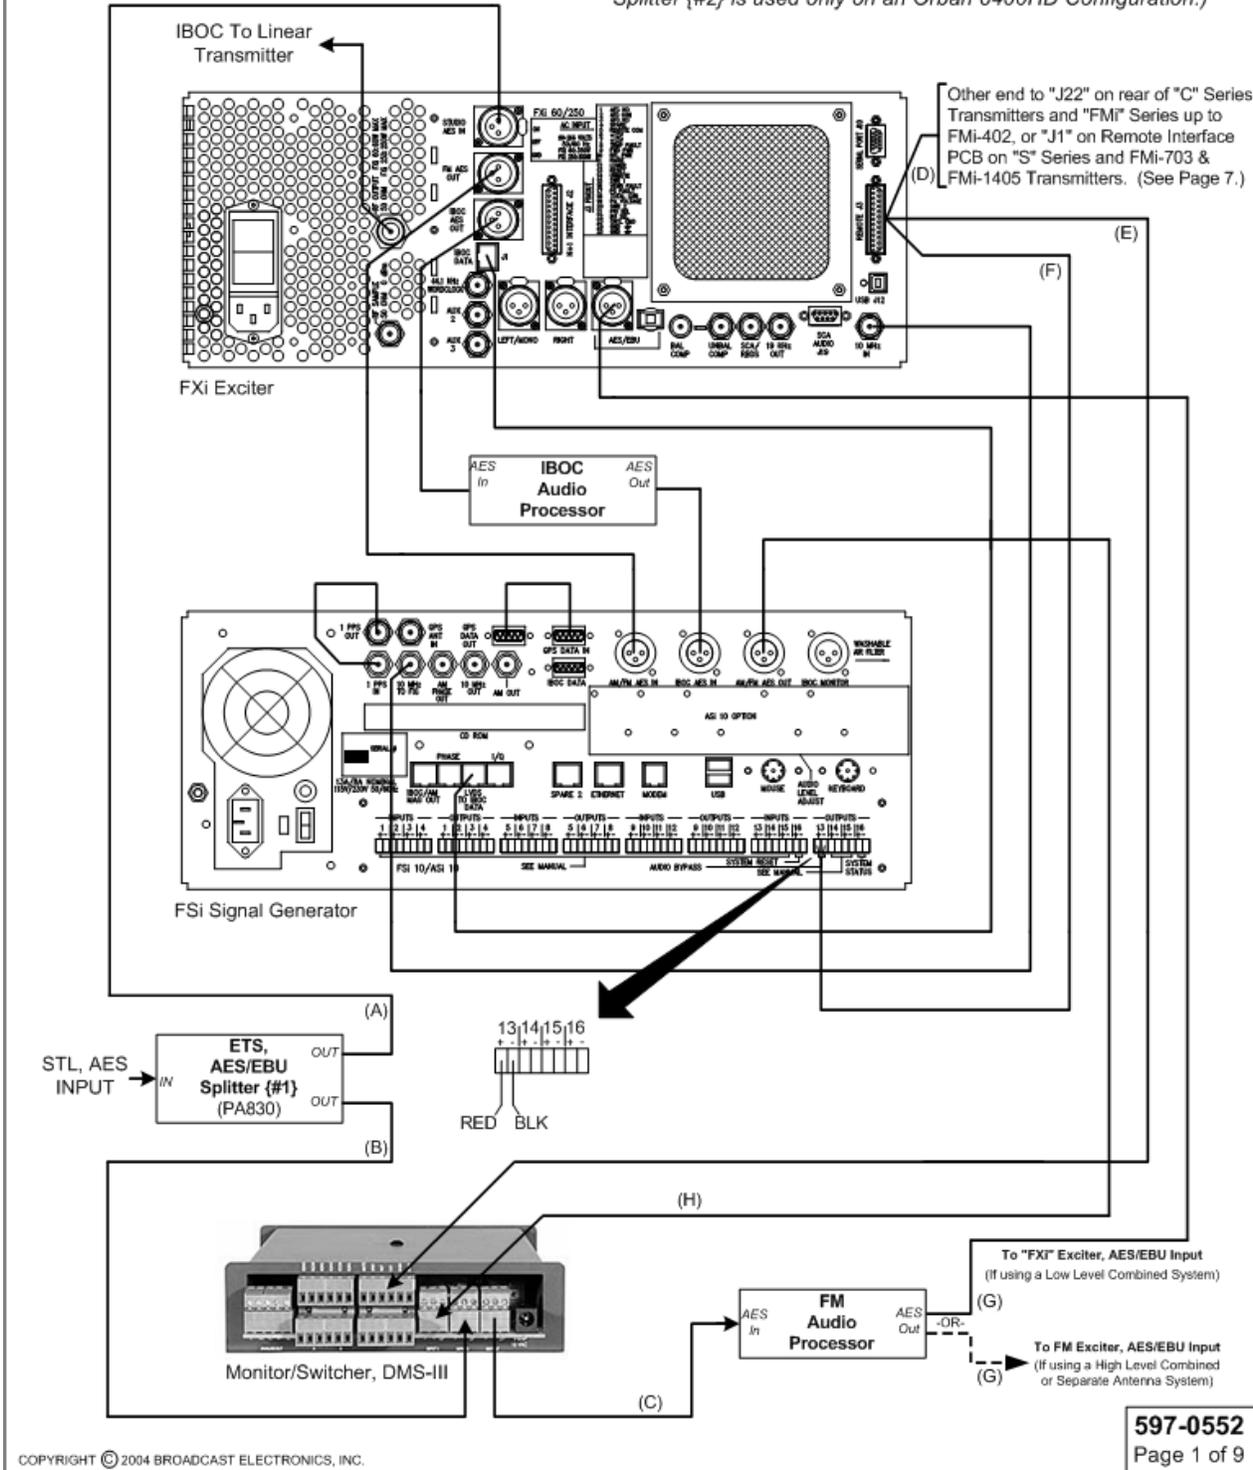

The following pages describe the bypass system interconnect.

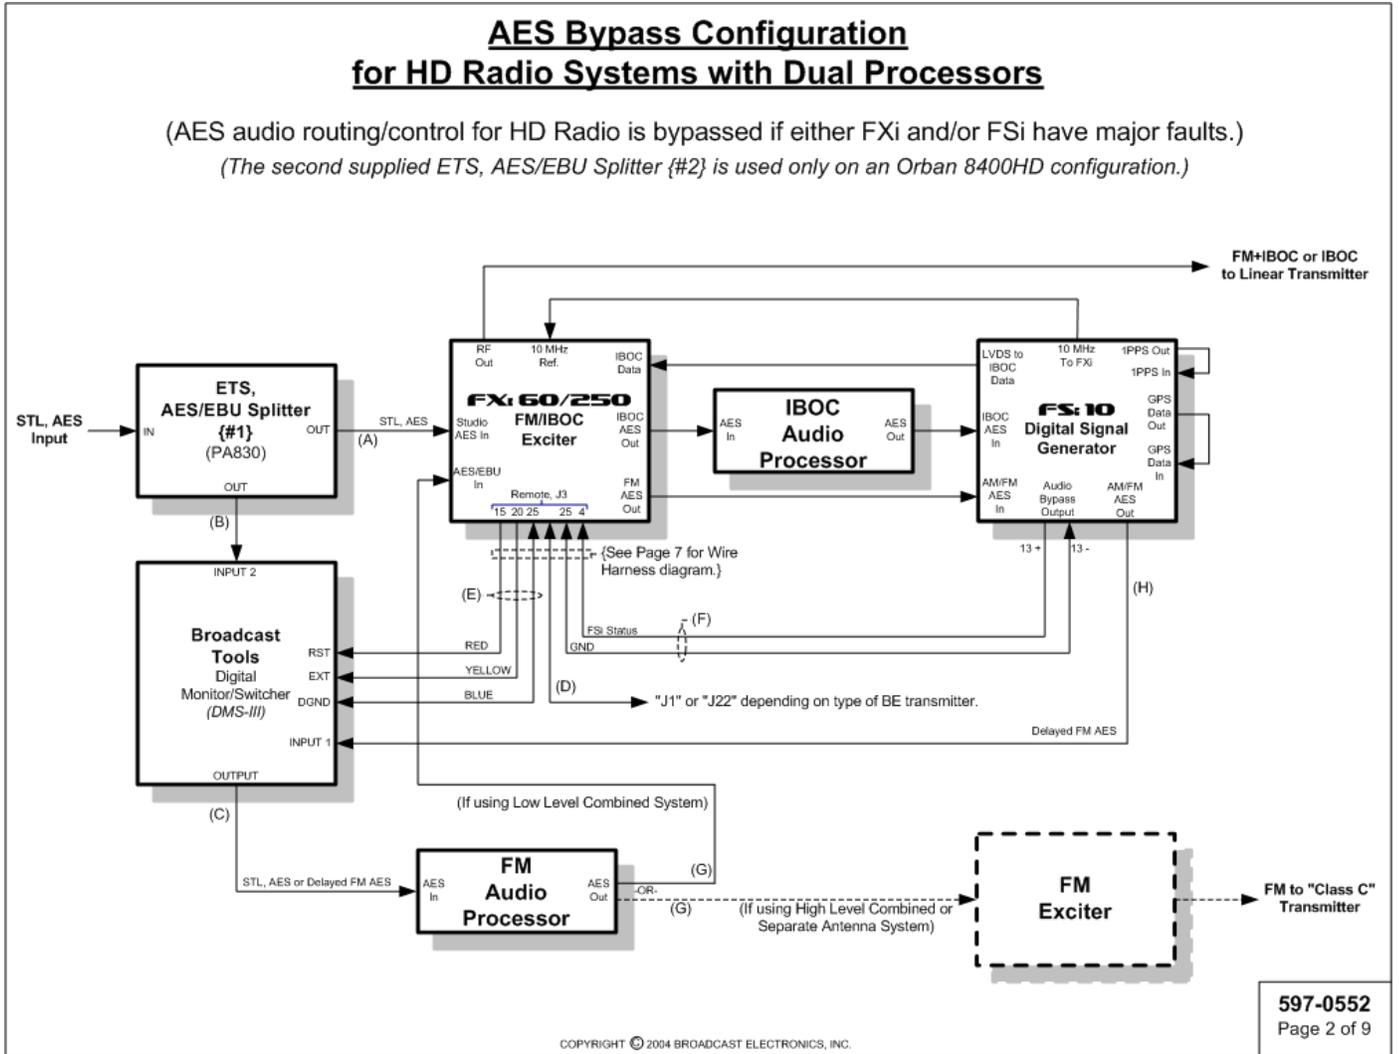

8.3 AES Bypass System Configuration, Dual Processor

AES Bypass Configuration for HD Radio Systems with Dual Processors

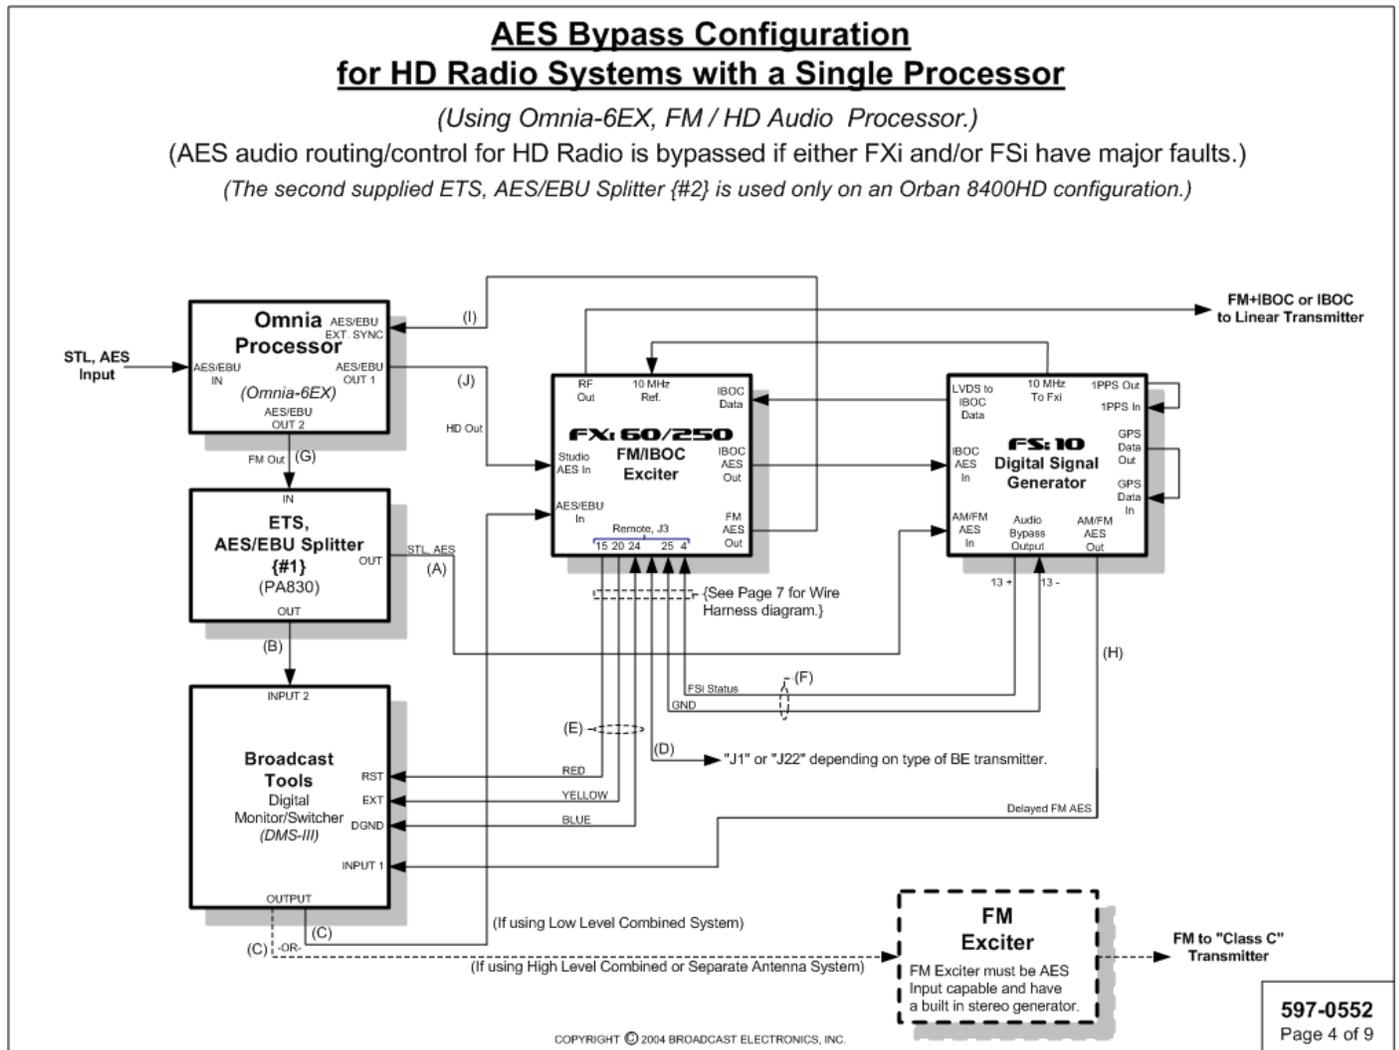

Connect cables to rear of FXi, FSi and AES Bypass Switcher as shown. Some cables are already supplied with the FSi-10 in the Accessory Kit, 979-0543. Remaining cables are included in this Kit, 979-0552. These are labeled as A, B, C, D, E, F, G & H in the diagram below. Also, refer to associated block diagram on page 2. (The second supplied ETS, AES/EBU Splitter {#2} is used only on an Orban 8400HD Configuration.)

8.4 AES Bypass System, Dual Processor, Block Diagram

8.6 AES Bypass System, Single Processor, Block Diagram – Omnia 6EX

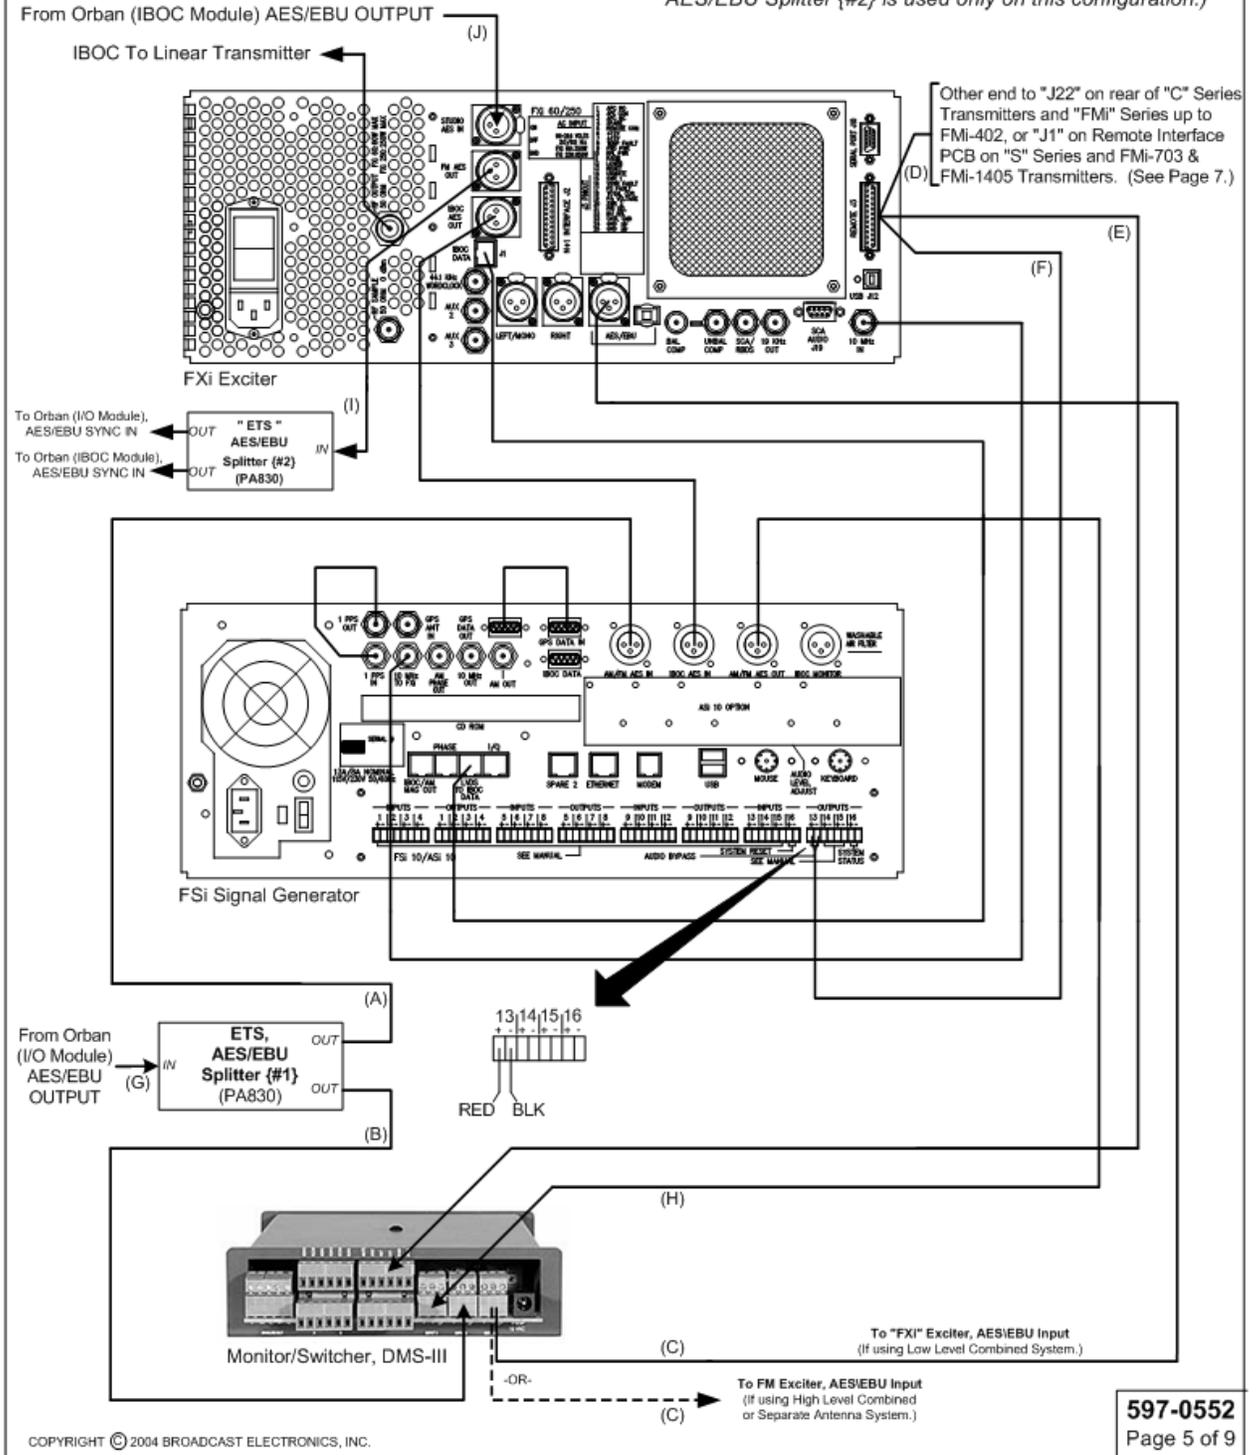

8.7 AES Bypass System Configuration, Single Processor - Orban 8400HD

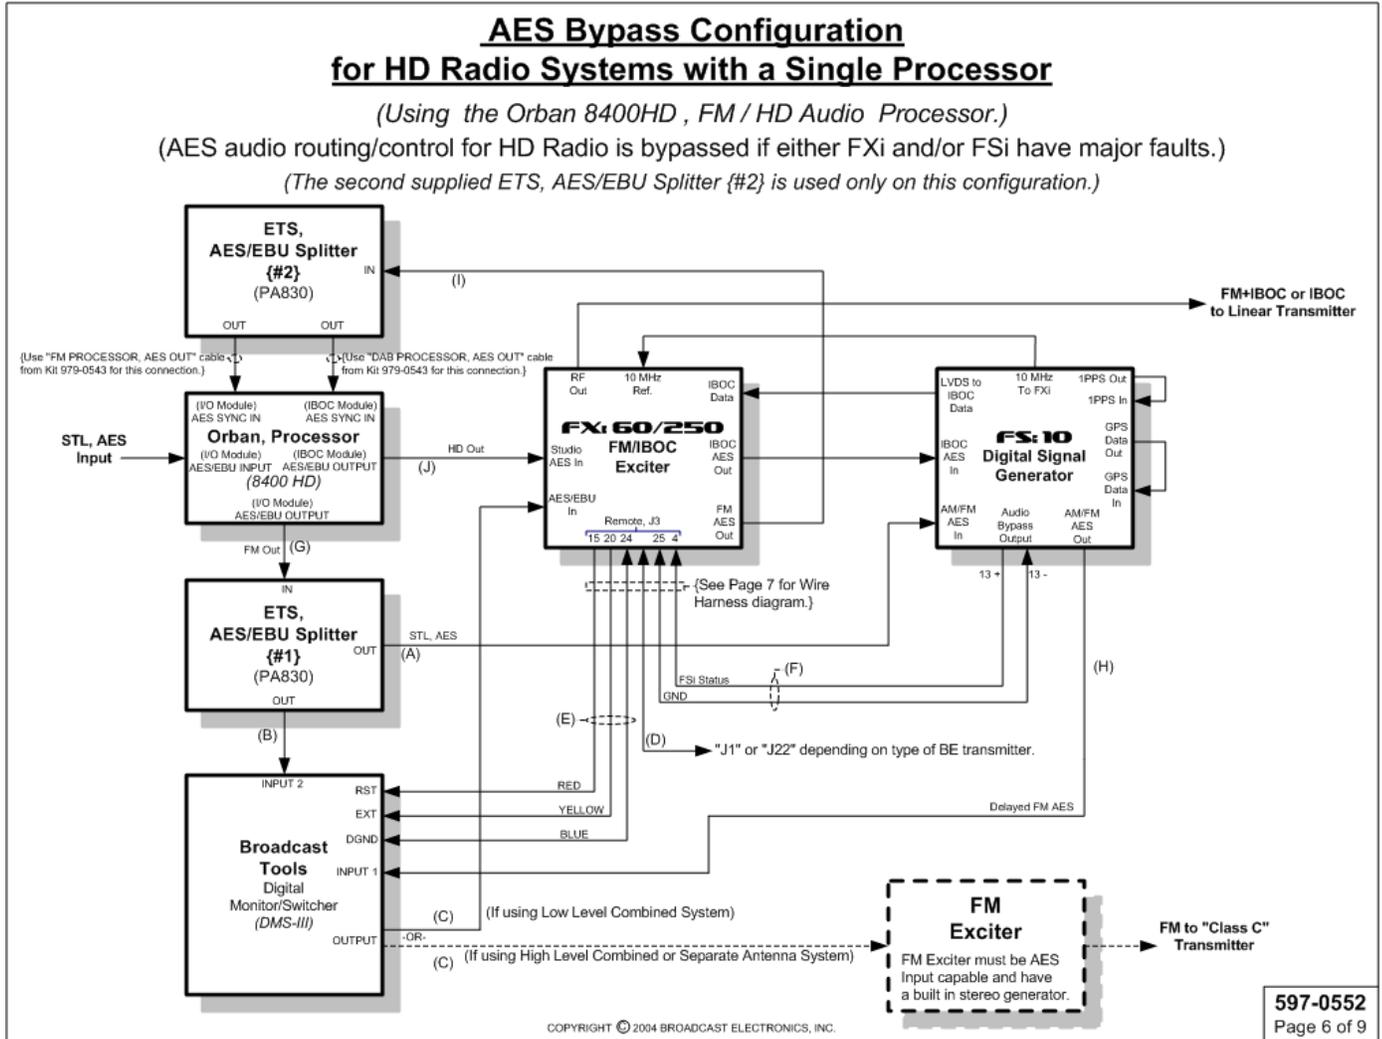

AES Bypass Configuration for HD Radio Systems using an Orban, 8400HD Audio Processor

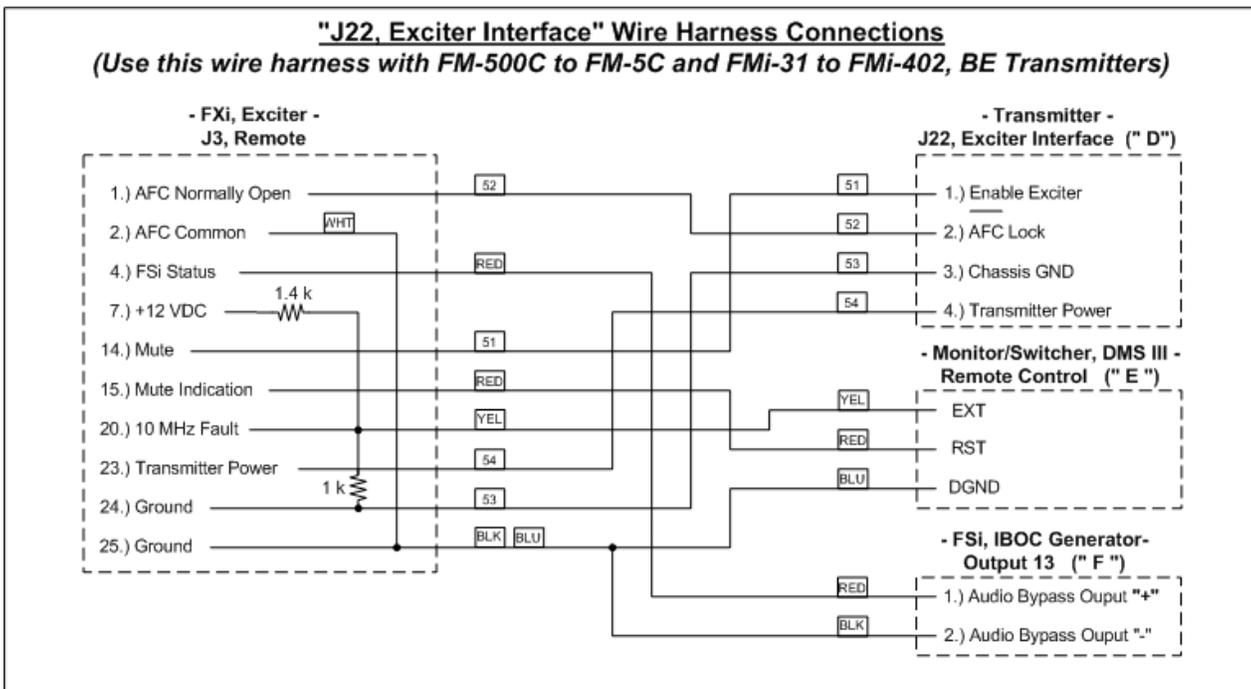

Connect cables to rear of FXi, FSi and AES Bypass Switcher as shown. Some cables are already supplied with the FSi-10 in the Accessory Kit, 979-0543. Remaining cables are included in this Kit, 979-0552. These are labeled as A, B, C, D, E, F, G, H, I and J in the diagram below. Also, refer to associated block diagram on page 6. *(The second supplied ETS, AES/EBU Splitter #2) is used only on this configuration.)*

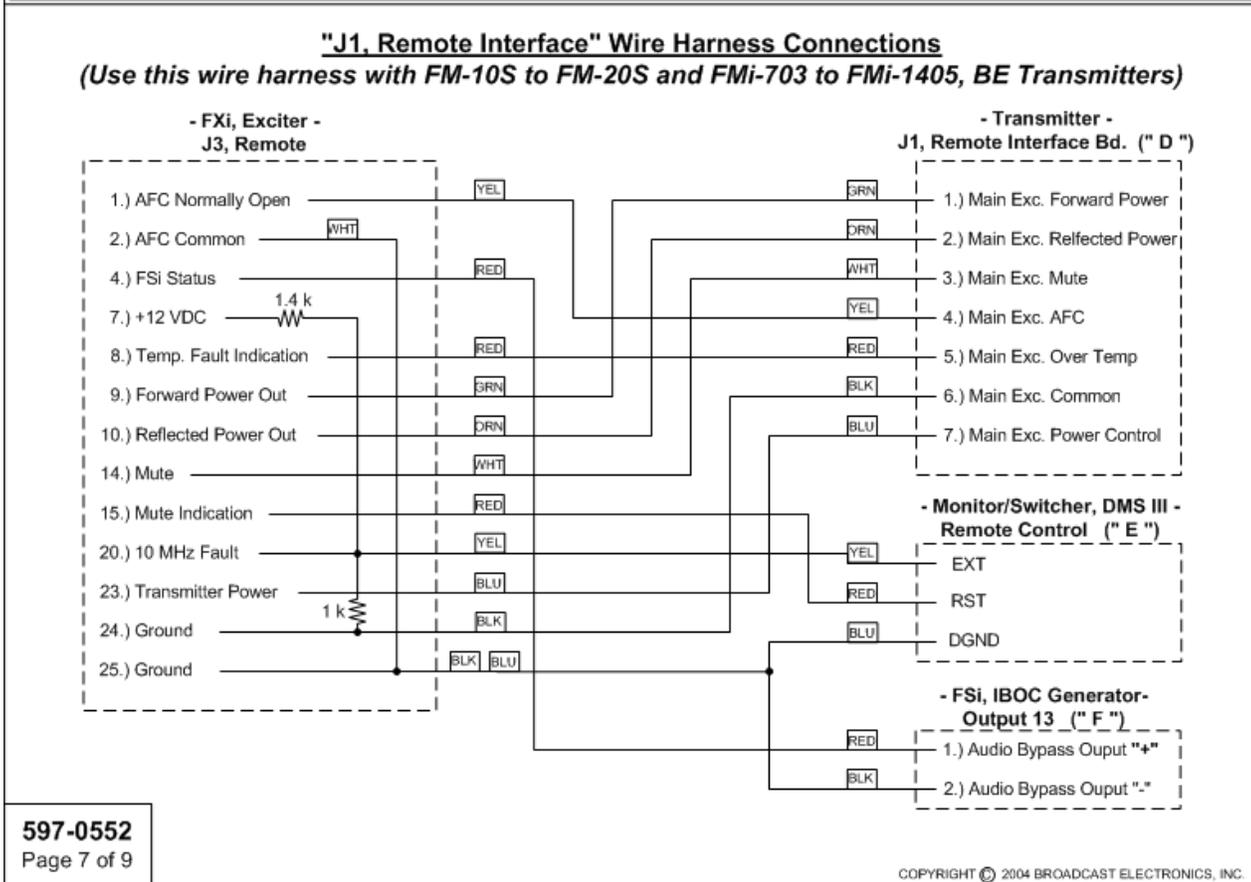

8.8 AES Bypass System, Single Processor, Block Diagram – Orban 8400HD

8.9 AES Bypass System, Wire Harness Connections

**Two Wire Harnesses are provided in Kit, 979-0552.
Use the Wire Harness configured for your particular "BE" Transmitter.**

8.11 AES Bypass System, Notes

NOTE:

If it is desired to monitor for digital errors only and to defeat the analog silence sense alarm, set SW2-7 to the "ON" position. The analog silence sense feature may cause the DMS-III to switch to the bypass mode when the silence's between program material is detected.

If you choose to set the Time Delay for bypass switchover to zero seconds, move SW2-6 to "OFF" and all SW1 switches to "OFF".

See the Broadcast Tools, DMS-III manual for more configuration details.

Broadcast Tools DMS-III, Switch and Jumper Setup : (As Configured At Broadcast Electronics, Inc.)

JP-3 ... Removed. (Buzzer Disabled)

JP-6 ... Input One set to 110 Ohm Termination.

JP-7 ... Input Two set to 110 Ohm Termination.

SW1 ... All Switches to "OFF".

SW2 ... SW2-7 to "ON", All Other Switches to "OFF".

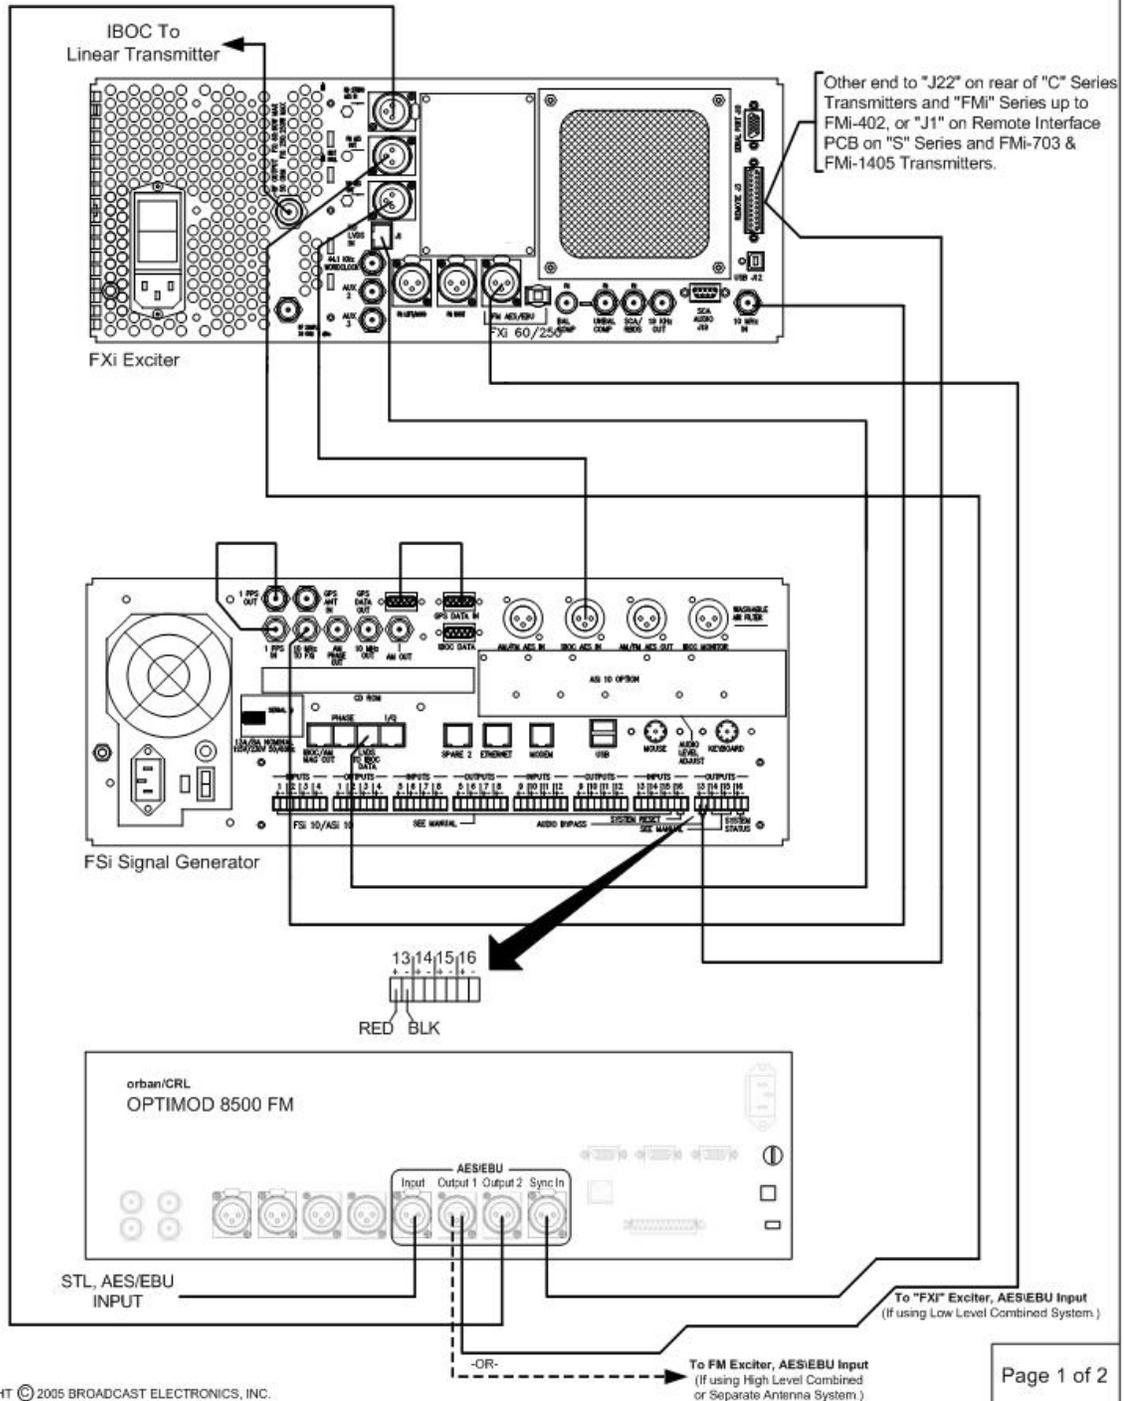

PAGE 9 of 9

8.12 AES Bypass System Configuration, Single Processor - Orban 8500FM

AES Bypass Configuration for HD Radio Systems using an Orban, 8500FM Audio Processor

Connect cables to rear of FXi, FSi and Orban 8500FM as shown. Some cables are already supplied with the FSi-10 in the Accessory Kit, 979-0543. Also, refer to associated block diagram on page 2.

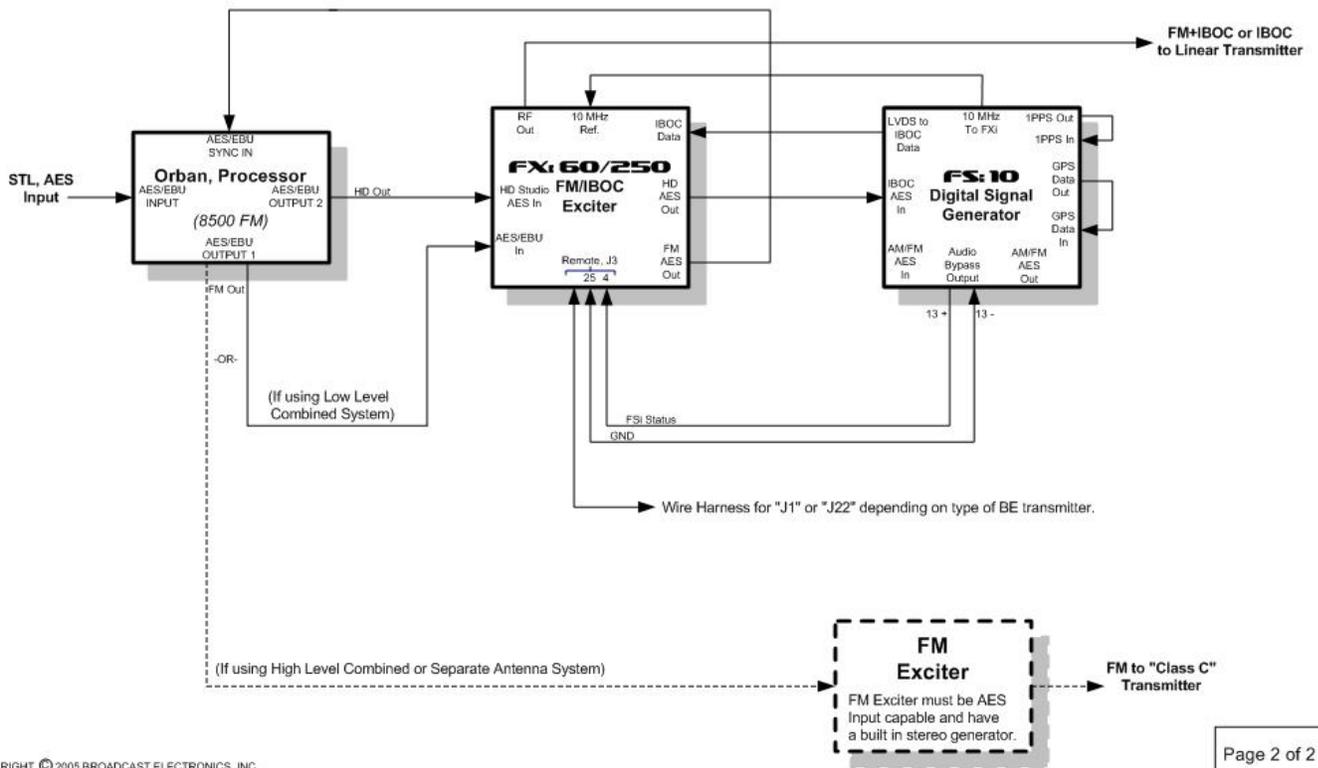

8.13 AES Bypass System, Single Processor, Block Diagram – Orban 8500FM

AES Bypass Configuration for HD Radio Systems with a Single Processor

(Using the Orban 8500FM , FM / HD Audio Processor.)

(No addition AES bypass equipment is needed, since the Orban 8500FM, FM/HD Audio Processor has the capability of directly providing delayed FM AES for either Low Level or High Level Combined System's.)

10 BE Part Numbers

This section provides parts lists for the FSi-10 IBOC Digital Signal Generator. The parts lists provide descriptions and part numbers of electrical components, assemblies, and selected mechanical parts required for maintenance. Each parts list entry in this section is indexed by reference designators appearing on the applicable schematic diagrams.

This bill of material uses an indented structure to show relationships of parts into sub assemblies. Example; all BOM LEVEL 2 parts are contained in the BOM LEVEL 1 part immediately above it.

BOM LEVEL	PART NO.	DESCRIPTION	QTY	REF. DES.
0	909-6025-MB3	FSi-10,HD,DIGITAL SIGNAL GENERATOR,MB3		
..1	229-8085-003	IC,CPU,P4,3.0GHz FSB,FSi/ASi/XPi	1	
..1	380-0310	FAN,12v,150 CFM	1	
..1	380-4831	FAN,CPU COOLER & HEATSINK,INTEL P4	1	
..1	400-1725	STRIP,QUIET SHIELD,17.25x.394	1.08	
..1	401-0015	MTG,ADH BACK,SMS-A-15-PANDUIT	1	
..1	402-0000	TY-RAP	18	
..1	402-0005	PRESS CLIP,NYLON W/ADHESIVE BACK	4	
..1	402-0006	MT,ADH BACKED,FOR CBL TIES	7

FSi, REAR-PANEL CONNECTOR DESCRIPTIONS, 597-0541-83.

FSi, REAR-PANEL CONNECTOR DESCRIPTIONS (Sheet 1 of 2)			
Function	Input/Output	Description	Connector
1PPS OUT	Output	TTL level, one pulse per second signals from the GPS. Pulse width is defaulted to 2ms.	BNC
GPS ANT IN	Input	Power is supplied to the antenna via the center conductor of the coaxial cable. This connection must be made with a single cable and not through any other devices such as an amplifier or splitter/combiner.	TNC
GPS DATA OUT	Output	RS-232. The GPS data output provides data to the ASi/FSi via the GPS DATA IN connector in serial format at 19200 8 N 1. Upon startup, the GPS outputs a packet of information that includes the type and status of the device. The GPS can then be controlled by the ASi/FSi. Once the GPS is locked and stable, it provides timing and position information in one second bursts.	DB9 Female
GPS DATA IN	Input	RS-232	DB9 Male
1 PPS IN	Input	TTL level, 50 ohm	BNC Female
10 MHz To FXi	Output	0 dBm, 50 ohm	BNC Female
AM PHASE OUT	Output (50 Ohm)	500 - 1770 kHz {Used On ASi-10 Only.}	BNC Female
10 MHZ OUT	Output	GPS 10MHz sine wave @ +3dBm into 50 ohms	BNC Female
AM OUT	Output (50 Ohm)	IF/RF OUTPUT {Not Used}	BNC Female
IBOC DATA	Input	RS-232	DB9 Male
AM/FM AES IN	Input	AES/EBU Audio	XLR Female
IBOC AES IN	Input	AES/EBU Audio	XLR Female
AM/FM AES OUT	Output	AES/EBU Audio	XLR Male
IBOC MONITOR	Output	AES/EBU Audio	XLR Male
IBOC/AM MAG OUT	Output	Balanced Analog Audio, 600 ohm, Pin 5+ ,4 -	RJ45 Female
PHASE	Output	RS422, 100 ohm	RJ45 Female
LVDS TO IBOC DATA	Output	LVDS, IEEE1596.3 BaseBand Digital I/Q data, 100 ohm Pin 1=FS+, 2=FS-, 4=CLK+, 5=CLK- 7=Data+, 8=Data -	RJ45 Female
I/Q	Output	BaseBand Analog I/Q, 100 ohm Pin 5=I+, 4=I-, 3=Q+, 6=Q-	RJ45 Female
SPARE 2	Input/Output	Not Connected.	RJ45 Female
ETHERNET	Input/Output	100 MHz Network Connection.	RJ45 Female
MODEM	Input/Output	Two Wire Telephony connection.	RJ11 Female
USB	Input/Output	USB.	Dual USB Female
MOUSE	Input	PS2 Compatible.	PS2
KEYBOARD	Input	PS2 Compatible.	PS2
AC POWER	Input	115VAC @ 13 Amps or 230VAC @ 8 Amps	IEC, AC input
INPUTS 1 THRU 14	Input	Static Input "+", 390 ohm pullup to 5V, All "-" tied together.	Phoenix, 8 pin Female

FSi, REAR-PANEL CONNECTOR DESCRIPTIONS (Sheet 2 of 2)			
INPUT15	Input	Static Input "+", 390 ohm pullup to 5V, All "-" tied together.	Phoenix, 8 pin Female
		Short + to - for 3 seconds for system reset.	
INPUT 16	Input	Static Input "+", 390 ohm pullup to 5V, All "-" tied together.	Phoenix, 8 pin Female
		Short + to - for 3 sec's for a system power down, repeat for a power up.	
OUTPUT 1 THRU 12	Output	Static Output "+", 390 ohm pullup to 5V, All "-" tied together.	Phoenix, 8 pin Female
OUTPUT 13 AND 14	Output	Bypass A. Static Outputs S.S. relay from + to -. Connected to AUDIO BYPASS.	Phoenix, 8 pin Female
OUTPUT 15 AND 16	Output	Static Outputs, S.S. relay from + to -.	Phoenix, 8 pin Female

FSi, REMOTE CONTROL INPUTS/OUTPUTS, 597-0541-84.

FSi REMOTE CONTROL INPUTS		
INPUT #	INPUT NAME	SIGNALING METHOD
1	Digital Carrier On	high-to-low/negative edge
2	Digital Carrier Off	high-to-low/negative edge
3	Audio Ramp Up To Delay	high-to-low/negative edge
4	Audio Ramp Down From Delay	high-to-low/negative edge
5	Audio Delay Increase	high-to-low/negative edge
6	Audio Delay Decrease	high-to-low/negative edge
7	Audio-A Bypass On	high-to-low/negative edge
8	Audio-A Bypass Off	high-to-low/negative edge
9	Audio-B Bypass On	high-to-low/negative edge
10	Audio-B Bypass Off	high-to-low/negative edge
11	Day	high-to-low/negative edge
12	Night	high-to-low/negative edge
13	---	---
14	System Shutdown	high-to-low/negative edge
15	System Power On/Off Toggle	hold low for at least 2 seconds, then high
16	System Reset	hold low for at least 2 seconds, then high

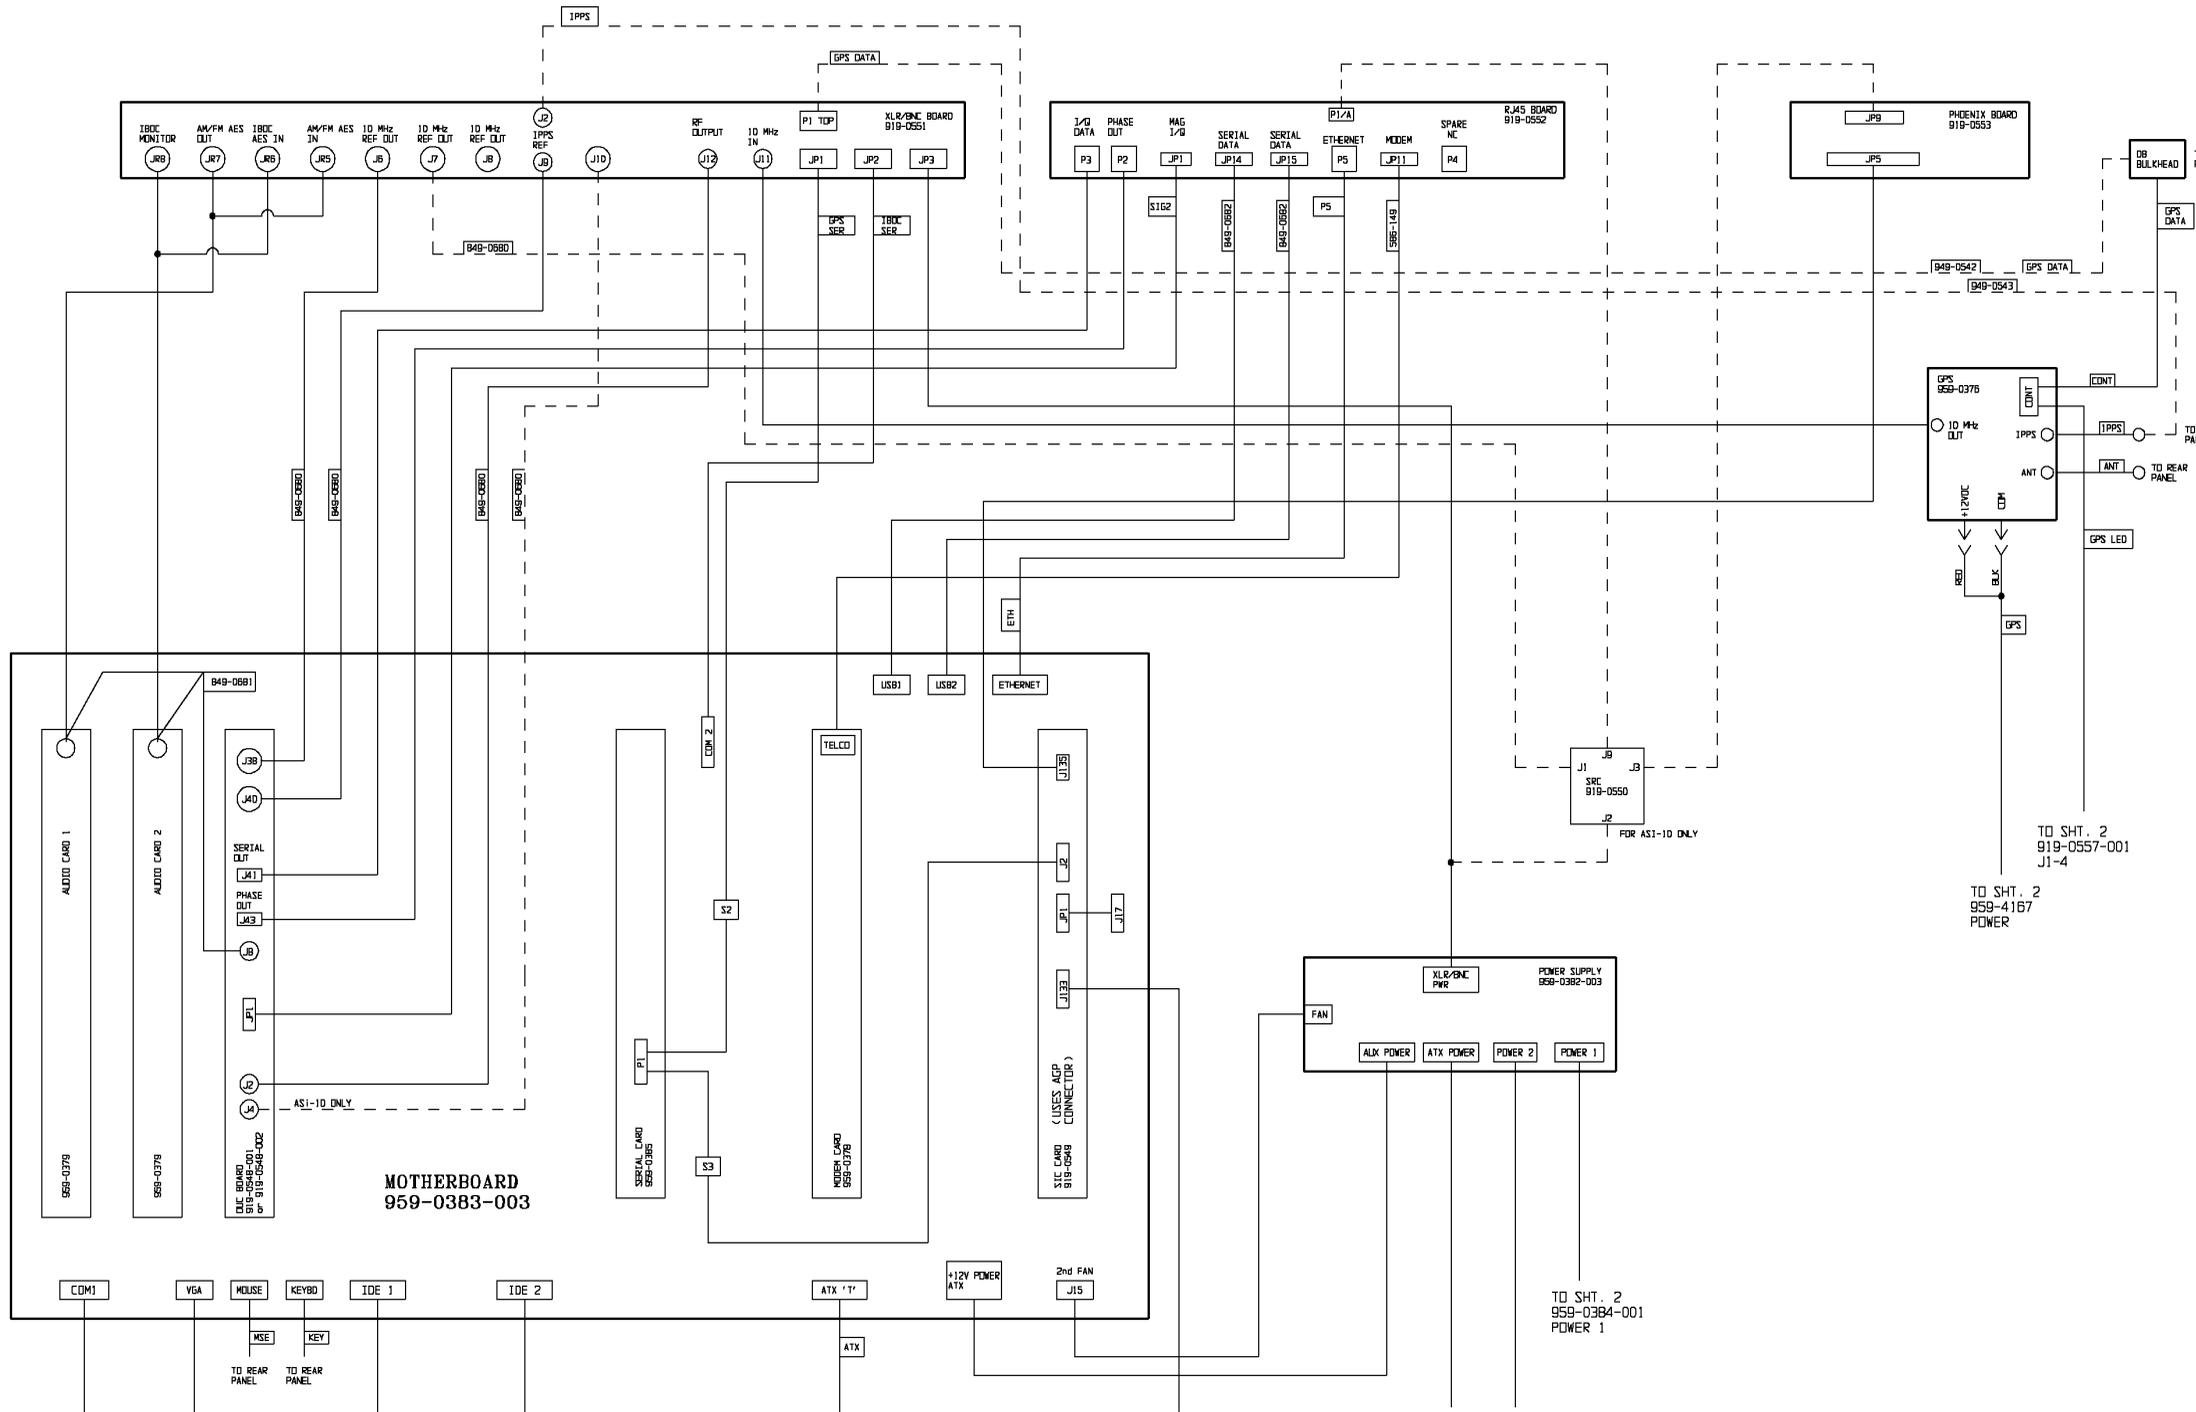

Note: "Low" or "Low Voltage" refers to a nominal TTL low logic level (0 volts).
 "High" or "High Voltage" refers to a nominal TTL high logic level (+5 volts).

FSi REMOTE CONTROL OUTPUTS			
OUTPUT #	OUTPUT NAME	LOW VOLTAGE OR CLOSED RELAY	HIGH VOLTAGE OR OPEN RELAY
1	Digital Carrier On/Off Status	Digital Carrier Off	Digital Carrier On
2	Audio Ramp Up/Down Status	Ramping Not Done	Ramping Done
3	Audio Delay In/Decrease Status	In/Decrease Not Done	In/Decrease Done
4	Audio-A Bypass Status	Audio-A Bypass Off	Audio-A Bypass On
5	Audio-B Bypass Status	Audio-B Bypass Off	Audio-B Bypass On
6	Day/Night Status	Night	Day
7	System Shutdown Status	Shutdown Not Done	Shutdown Done
8	System Operational Status	System Not Operational	System Operational
9	System Alarm Status	No System Alarm	System Alarm
10	---	---	---
11	---	---	---
12	---	---	---
13	Audio-A Bypass Status (relay)	Audio-A Bypass Off	Audio-A Bypass On
14	Audio-B Bypass Status (relay)	Audio-B Bypass Off	Audio-B Bypass On
15	---	---	---
16	System Operational Status (relay)	System Operational	System Not Operational

Note: "Low" or "Low Voltage" refers to a nominal TTL low logic level (0 volts).
 "High" or "High Voltage" refers to a nominal TTL high logic level (+5 volts).
